

COLD STEEL®

ANYTIME ANYWHERE

PERFORMANCE

Good looks are important, in knives as much as in life! Perfect fits, clean lines, precise grinds and beautiful polishes all add value and satisfaction when you buy a knife. Often, the true beauty of a knife only becomes apparent when the knife is used!

At Cold Steel,® we believe that all of our knives must perform. We insist all of our knives deliver extraordinary performance for their asking price — “they must deliver their money’s worth”.

In order to achieve this goal, we are vitally interested in all the elements that are critical to performance. When it comes to the blade, these include profile, thickness, blade geometry, edge geometry, steel and heat treatment. Every one of these factors is studied in minute detail to arrive at the optimum combination for a specific use. If the knife is a folder, we concentrate on the locking mechanism to ensure the strongest, safest construction. For handles, we strive to develop the perfect mix of materials and ergonomics to offer the most comfortable secure grip available. Above all, we TEST what we make! Rigorous testing is the only way to ensure we get the level of performance we demand.

WARRANTY

We stand behind our knives and swords 100%. We subject them to the highest standards in the industry and strive to make each as perfect as possible. We warrant that our folding knives, fixed blade sheath knives, and swords are free from defects in workmanship and materials.

This warranty does not cover normal wear and tear, re-sharpening of the blade, damage caused by misuse, lack of normal maintenance, or disassembly.

Remember any knife or sword can break or fail if subjected to sufficient abuse, so please do not use our knives and swords inappropriately and remember no knife or sword should be used as an axe, hatchet, screwdriver, or pry bar.

MOST OF THE TESTS SHOWN ON THESE PAGES AND IN OUR “APOCALYPSE PROOF” AND “ASTOUNDING SWORD PROOF” DVD’S ARE DANGEROUS AND SHOULD NOT BE DUPLICATED. ANY KNIFE CAN BE BROKEN OR DAMAGED IF SUBJECTED TO SUFFICIENT ABUSE. THESE DESTRUCTIVE TESTS CONSTITUTE GROSS ABUSE OF A KNIFE. DUPLICATING THESE TESTS OR ALTERING YOUR KNIFE WILL VOID YOUR WARRANTY. THE WARRANTY COVERS DEFECTS IN MATERIALS AND/OR WORKMANSHIP. IT DOES NOT COVER ABUSE OR THE EFFECTS OF NORMAL WEAR AND TEAR.

APOCALYPSE PROOF

In an industry swarming with “tactical” knives and a bewildering number of so-called Martial experts it’s hard to imagine a time when all of this was taboo.

Surprisingly, not too long ago it was considered bad taste to even contemplate discussing the tactical applications of a knife. Design was predominantly limited to either historical interpretation or aesthetic value. A few visionary custom knife makers made their own explorations, but all the major knife companies shied away from the controversy of the fighting knife.

Then along came Cold Steel...

dangerous torture tests in front of live audiences we won the hard-earned praise and support of the military, law enforcement and self-defense communities. Our first adopters were warriors, and we take great pride in that. As our company President, Lynn C. Thompson is fond of saying; “We were tactical before tactical was cool!”

We believed from the outset that it would be unethical and negligent to develop such sharp and effective tools without focusing on their strength as well. Therefore we continue to invest millions of dollars into not only the design and development of sharp knives, but strong knives too! Cold Steel has led the way in lock design, handle ergonomics and material development and, to this day, we believe you will not find stronger or safer knives on the market.

Now, over 30 years after we first stunned the industry with our graphic testing, we remain true to our roots with another installment of our world-renowned PROOF series that we have named APOCALYPSE PROOF!

Watch us subject our products to the most grueling and horrific torture testing that we could devise, and see why you should spend your hard-earned money on Cold Steel.

We hope this video will prove as entertaining as it is informative, but be warned: This presentation features hardcore cutting tests, torturous abuse and extreme feats that may be too graphic for some people, and viewer discretion is advised.

We not only proudly discussed the tactical application of the knife, but we began openly testing those theories with graphic and extreme demonstrations of strength and sharpness that shook the industry to its core.

With our unflinching discussion of the combative use of the knife, and by subjecting our knives to grueling and

dangerous torture tests in front of live audiences we won the hard-earned praise and support of the military, law enforcement and self-defense communities. Our first adopters were warriors, and we take great pride in that. As our company President, Lynn C. Thompson is fond of saying; “We were tactical before tactical was cool!”

THE ANNUAL 2015 COLD STEEL CHALLENGE

SEPTEMBER 26TH SEASIDE PARK, VENTURA, CALIF.

This is your chance to test your martial skills and years of training and be able to do it in a safe, respectful environment. \$10,000 worth of Cold Steel product will be awarded amongst the top competitors who compete in our fighting contests and our throwing events. There will also be incredible buys on the complete Cold Steel line of products in our sales area, all at irresistibly low prices.

Complete contest rules and a list of events will be posted on our website soon. For more information, maps, and photos of previous year’s Cold Steel Challenges, go to our website at www.coldsteel.com.

COLD STEEL
CHALLENGE

STEEL AND HEAT TREATMENT

VG-1 SAN MAI III®

VG-1 San Mai III® is comprised of three layers of expertly laminated stainless steel combined into one blade.

Hard high carbon steel is sandwiched between two layers of tough lower carbon steel, maximizing edge holding ability while still withstanding impact and lateral stresses.

Produced in Japan in extremely limited edition, it is used on our most exclusive and collectible fixed blades.

VG-1 STAINLESS

Through our research and development studies in our facility, Japanese VG-1 steel showed outstanding edge-holding ability and proven strength in point and edge durability tests. With good overall performance and proven durability, abrasion and corrosion resistance.

AUS 8A

We have been using the same expertly heat treated Japanese AUS 8A steel for nearly 3 decades. This steel has tested amazingly well over the years and has proven to be an excellent steel for working knives — tough, corrosion resistant, with good edge holding and easy to re-sharpen.

SK-5 HIGH CARBON

Japanese high carbon SK-5 is traditionally used for making a variety of hand tools, including chisels and woodcutting saws. With good all-round toughness and excellent edge holding capabilities, as well as excellent abrasion resistance it has stood the test of time and seen use in many countries.

O-1 HIGH CARBON

O-1 is a high carbon, oil hardening tool steel. Popular with custom knife makers it is used both for stock removal and forged knives around the world. With the proper heat treatment it will take and hold a very fine edge while remaining very tough and durable. An ideal high carbon steel for tough edged weapons.

CPM 3-V

American CPM 3-V can take an extremely fine edge which is highly chip-resistant. In recent years, it has proved very popular with custom knife makers.

Though costly, this modern tool steel is astonishingly tough and exceptionally wear resistant. It is a fine-grained powdered steel, with a very uniform microstructure giving it excellent impact resistance and fine edge holding performance, and making it perfectly suited for larger blades where extreme toughness is required.

1055 HIGH CARBON

The carbon content and lean alloy of this shallow hardening steel make this a very sturdy material that avoids a lot of the brittleness commonly associated with higher carbon materials. Particularly suited to blades that require extreme impact resistance it is often seen in high durability large fixed blades and swords.

1090 HIGH CARBON

1090 High Carbon Steel is an excellent choice for larger fixed blades. It takes and holds a good edge while remaining tough enough to withstand even our brutal stress tests. A good all-round performance high carbon steel that is very forgiving under shock.

52100 HIGH CARBON

52100 High Carbon is a hard wearing steel that’s an excellent choice for custom hunting and outdoor fixed blades. Often used by custom knife makers in forged blades that require toughness and wear resistance in unforgiving conditions.

GERMAN 4116

4116 is a fine-grained stainless steel from Germany often used in the Pharmaceutical Industry and in high end Kitchen Cutlery. Its carbon and chromium content is balanced for excellent corrosion resistance and strength. Capable of taking a very fine, sharp edge, it makes an excellent choice for outdoor hunting applications.

GERMAN D2

A tough and hard wearing air hardening tool steel that has good corrosion resistance, this German steel has been used for decades by both factories and custom makers to produce rugged knives for outdoor and hunting use.

CPM-S35VN

An exceptional American super steel, CPM-S35VN is not only very tough and durable but it will take a fine razor sharp edge that will last a long time. An incredibly fine-grained powdered steel with a uniform microstructure, it offers very consistent performance. Durable, reliable, highly corrosion resistant and tough even when honed to a very fine edge, it is a good well rounded steel choice for high-end superior quality custom knives and tools.

CARPENTER CTS® BDI ALLOY

A performance stainless alloy steel from the USA that has seen extensive use in the Military and Defense Industry as well as in Surgical Cutlery and the custom knife industry. BDI has earned an excellent reputation for edge retention and corrosion / stain resistance.

CARPENTER CTS® XHP ALLOY

Carpenter American CTS® XHP is a high carbon, high chromium powdered alloy steel with very impressive edge holding abilities. With an extra fine, uniform grain structure it out performs its ingot-steel equivalents by a large margin. This high performance steel has been used in everything from superior custom kitchen cutlery to surgical tools. It can also be polished to a beautiful satin finish, making it an excellent choice for high end every day carry knives, especially those that require a very fine cutting edge.

CPM 20CV

This finely grained, powdered American tool steel combines very forgiving hard use durability with vastly superior corrosion and wear resistance. A popular choice for high end custom makers, its edge holding abilities are frankly outstanding. An excellent choice for hard wearing knives that require a very sharp, long lasting edge.

THE TRI-AD® LOCK

ANDREW DEMKO

Undoubtedly, Cold Steel makes the safest, strongest folders on the planet. It's one of many qualities that separates Cold Steel from our competitors.

Our latest improvement is our patent-pending Tri-Ad® lock. Andrew Demko is the originator of the Tri-Ad's® novel locking mechanism. It's a successor to a patented lock design originally created by the very talented John PerMar.

THE "STOP PIN"...

The cornerstone of the Tri-Ad's® strength, among other subtle refinements, is the inclusion of a new "stop pin" which re-distributes the load of vertical positive and negative pressures on the lock.

The stop pin receives all positive pressure (pressure on the cutting edge) and transfers it into the handle frame and liners where it can be more effectively absorbed.

Negative pressures on the lock produced, for example, by prying, digging, piercing or even abusive spine whacks are redistributed because the stop pin receives the forward pressure from the rocker and transfers it into the liners protecting the rocker and its pivot from failing.

SELF ADJUSTING...

Finally, outside of keeping the lock free from the buildup of pocket lint in the mechanism, the Tri-Ad® lock requires very little maintenance. It's designed to be self adjusting, in the

sense that, over time as parts begin to wear, the Tri-Ad's® design will allow it to adapt so the locking bar always wedges deeper in the lock channel between the stop pin and the shoulder of the precision cut tang notch. This feature allows for a very safe and secure lock-up.

CODE 4
HOLDING
250 LBS!

THE STRENGTH OF THE TRI-AD® LOCK:

The exclusive Tri-Ad® Locking Mechanism is incredibly strong. Here the Code 4 is shown holding 250 lbs. Some of our folders can hold up to 600 Lbs!

NEGATIVE PRESSURES on the lock are transferred to the rocker, pushing it forward into the blade tang. The stop pin effectively absorbs most of this force and re-distributes it into the frame and liners.

POSITIVE PRESSURE on the cutting edge is transferred from the stop pin into the handle frame and liners where it can be more effectively absorbed.

The blade is shouldered around the stop pin for increased resistance to wear and tear. The stop pin buffers against, and redistributes the force pressure from the blade.

Extra space is provided to allow the rocker to fall deeper into the notch over time in response to normal wear and tear.

The full surface of the lock and blade tang mate flush together. The slightly angled lock tends to force the lock inwards under pressure instead of outward.

The rocker pin hole is made with extra space on either side to allow for self adjustment.

CODE 4™ SERIES

NEW: NOW WITH U.S. MADE CARPENTER CTS® XHP ALLOY BLADE STEEL

There are very few things in life as comforting as knowing you are carrying a good knife. Many of our friends and colleagues in Law Enforcement talk about how they're always looking for that one faithful, reliable, lightweight knife that can become a permanent part of their every day load out.

When designing our Code 4™ series we took inspiration from that feeling of reliability and developed a knife that we believe is destined to become the standard embodiment of dependability.

We created an ultra-thin, ultra-light, highly functional utility knife that is incredibly comfortable to carry all day. It won't weigh down your uniform or provide the kind of unnecessary bulk that may cause you to leave the knife at home, causing you to be unprepared in your time of need. Invariably, the best knife for the job is the one you have with you!

Available in a variety of blade configurations, with an ambidextrous pocket clip and thumb studs, the Code 4™ series feature sturdy, hard-anodized gun metal grey 6061 Aluminum handles, the unparalleled strength of our world renowned and exclusive Tri-Ad® lock, and high satin polished, razor sharp blades using US made Carpenter CTS® XHP Alloy.

Make a Code 4™ part of your daily carry to experience the peace of mind that comes from knowing you'll always have a truly great high performance folder when you need one.

NEW TIGER CLAW™

The Cold Steel Tiger Claw™ represents the future of folding Karambit design!
Created by celebrated custom-knife maker Andrew Demko, this exciting new multi-functional folder is simply overflowing with design innovations!

The blade was designed following Andrew Demko's extensive testing and experimentation as a Journeyman Electrician and Engineer. When making his own multi-purpose hand-made work knives he made his own Karambit / Hawkbill hybrid blade that could cut rope, cable, wire and anything else his vocation threw in his path.

This knife served him well through years of hard use, and, when tasked by Cold Steel® to develop his own take on a folding Karambit, this blade shape immediately came to mind.

Replicating Andrew's original blade design but in premium XHP steel, the Tiger Claw™ offers the tactical cutting and slashing performance of the Filipino and Indonesian fighting Karambit with the utility and function of a working man's Hawkbill.

With the patented Demko thumb-plate, the Tiger Claw™ offers a fully ambidextrous fast draw from the pocket either in a saber grip or a traditional blade-down Karambit grip, deploying the blade with lightning fast ease!

Made with his signature minimalist style, Demko's Tiger Claw™ features a slim line CNC machined US G-10 handle, a matte black aluminum ring and, perhaps most excitingly of all, our all new locking system!

The uniquely modified Tri-Ad® locking system features all of the strength, reliability and performance of our world famous Tri-Ad® lock, but with fully ambidextrous one-handed forward release opening - making this knife a breeze to open and close with one hand regardless of how you choose to carry or deploy it!

NEW BLACK TALON II

Our original "Black Talon" was a revolutionary knife in many ways. It was a handmade, limited edition folder, and featured a modified curved talon blade* made from Japanese San Mai III® steel. It had a sleek titanium frame with G-10 scales and - for its time - a very strong locking mechanism.

Our fans have been clamoring for us to bring back this classic iconic blade, so we are proud to announce a newly re-designed knife that we have christened the Black Talon II!

A design collaboration between Cold Steel® President Lynn C. Thompson and custom knife-maker Andrew Demko, the Black Talon II is a modern masterpiece!

Its sinuously curved, needle sharp blade still features the distinctive down-swept point and pronounced belly of the original, but with all new high end American Carpenter CTS® XHP Alloy and a re-designed tip for additional strength and durability.

The textured premium USA G-10 scales offer maximum retention and grip even in cold or wet conditions while still being kind on your clothing when drawn from the pocket.

The contrast between the deep black of the scales and the exquisite rich satin polished blade further emphasize the flair and style of this good-looking and elegant folder.

Featuring our high performance Tri-Ad® locking mechanism for added safety and strength, this thin, lightweight and eye-catching knife is sure to be the talking point of anyone's collection!

SWIFT I
(HIGH SATIN
POLISH)

NEW SWIFT™ SERIES

Cold Steel® is proud to introduce the Swift™, a sleek, fast and good looking new assisted opening knife by custom knife maker Andrew Demko.

Featuring the patent pending Flash-Tek™ spring assist mechanism, the Swift™ has the astonishing speed and smoothness of the finest assisted opening knives, but with the unparalleled strength you have come to expect from Cold Steel® and Andrew Demko.

The Swift is, without a doubt the strongest assisted opening knife on the market today. Virtually impervious to shock, it adds a new degree of safety hitherto unseen in the assisted knife genre.

Its beautiful, dual-tone blade is manufactured from American CTS®XHP Alloy and honed to a fine cutting edge. The slim line modified spear point has a pronounced recurve on the spine, which not only reduces the knife's profile when closed but creates a comfortable and functional finger or thumb ramp for detail and precision work.

Unlike other assisted knives on the market with their flat, uncomfortable slab grips, the Swift has ergonomic 3-D CNC machined and bead blasted American G-10 handles that are a joy to hold and easy to use regardless of grip, with or without gloves.

This incredibly comfortable, lightweight and fast action folder not only changes the game when it comes to assisted knives, but it's a pleasure to carry, and to use!

NEW 4-MAX™

Andrew Demko is one of the most respected custom knife makers in the industry.

The incomparable strength, and bold overbuilt aesthetics of his work have developed quite a following, and his custom knives have become highly collectible in recent years.

Andrew has a well-established collaborative history with Cold Steel®, working not only as a Designer and member of our Research and Development Team, but also as one of our PROOF crew, making world renowned cuts in our promotional testing videos!

As a lifelong Martial Artist (a 5th Degree Black Belt in Aikido) Andrew shares many of the same interests as our President Lynn C. Thompson, and together they have collaborated to design some of our most popular knives.

It is with great pleasure therefore, that we are introducing the first of our Signature Edition Custom Classics; Andrew Demko's 4-Max™!

Bringing together all of the finest elements of Andrew's design genius, the 4-Max™ was developed with one goal in mind, to deliver the maximum strength and highest performance within a 4" blade limit.

This over-built beast is without a doubt the strongest knife we have ever produced and we're willing to bet that right now, it's the strongest 4" folding knife in the world!

Bridging the gap between production knives and expensive custom offerings, the 4-Max™ is 100% made in the USA, from the finest materials available.

The 4-Max's™ extra thick, extra wide, drop point blade is made from USA CPM 20CV steel – offering a near perfect balance between durability and edge holding performance. Sharpened to a razor edge and then two-tone satin polished, it's as good looking as it is effective!

The 4-Max's™ matte finished tumbled titanium liners and back spacers contrast beautifully with the Desert Tan 3-D CNC machined and bead blasted American G-10 and provide an even greater degree of strength to this already immensely tough knife.

Despite its highly collectible appeal, the 4-Max™ is no mere "safe queen". It is not an "art knife" to be displayed in a glass case – it is built to work, and work hard! Unashamedly big, bold and beastly – the 4-Max™ is a real heavyweight. Sure to last a lifetime of hard use – and more!

HOLD OUT® SERIES

NEW: NOW WITH U.S.
MADE CARPENTER CTS®
XHP ALLOY BLADE STEEL

The Hold Out has fast become one of Cold Steel President Lynn C. Thompson's favorite folding knives.

Ideal for military and law enforcement personnel, or just law abiding citizens who may find themselves in harm's way, the Hold Out series provide the comfort and peace of mind that comes from carrying a high performance folder but in an astoundingly lightweight and easy to carry package.

Once for ounce, they may well be the strongest folding knives in the industry! Their beautiful, minimalist design is a wonder of functionality; while deceptively simple in appearance, they represent a huge array of design breakthroughs and a staggering amount of performance!

The Hold Out's beautiful satin polished blades are extremely broad; they are flat ground from the spine, with a shallow "V" cross-section culminating in a razor sharp hand-honed edge. Continuously curved from the heel to the needle-sharp tip, the blade cuts and shears through tough and fibrous material with ease and makes short work of tasks that would challenge many of the folding knives on the market today.

Its American G-10 handle is a wonder of ergonomic design. Allowing a full and secure four-finger grip. It is wonderfully secure in hand and will not roll or twist with use. The grip enhancing G-10 and handle holes further aid traction in a wide range of grips, working equally well tip up, down in an "ice pick" grip or even held like a push dagger!

Incredibly thin and flat, with an ambidextrous pocket clip designed for deep carry, even the largest of the Hold Out series is easily concealed in a pocket, clipped into a waistband or tucked into a boot. The blade and handle geometry and the positioning of the Tri-Ad® lock in the Hold Outs came together perfectly. Working together to create a knife whose strength versus weight ratio stunned even our own research and development team!

We believe that the Hold Out may well represent the future of multi-functional, high performance every day carry knives.

COUNTER POINT SERIES

**NEW: NOW WITH U.S. MADE
CARPENTER CTS® BDI ALLOY BLADE STEEL**

Cold Steel President Lynn C. Thompson spent many years investigating the best features of high-end boot knives, and how best to apply them to a folder.

The Counter Point series represents the culmination of that extensive research and development.

Available in three blade sizes (3", 4" and 6") their stiletto inspired spear point blades have a distinctively pronounced false edge and a lustrous satin finish, combining to make a blade that not only looks great, but delivers a show stopping performance!

Made from American CTS® BDI Alloy Steel, the Counter Point is highly corrosion and stain resistant and takes a very sharp, and durable edge.

The expertly designed handle is lightweight, but incredibly strong. Made from Griv-Ex™ polymer and reinforced with heat treated aluminum liners, the handle is comfortable and secure in almost any grip imaginable.

For added strength and safety, we equipped the Counter Point with our Tri-Ad® locking mechanism, proven to be the strongest lock in the industry today.

Strong, light, versatile, concealable and above all functional, the Counter Point series takes the best features of a quality boot knife and combines it with the ease of carry of a high performance folder.

It's both a functional and attractive EDC (Every Day Carry) knife and a steadfast resource in any rescue or emergency situation.

SPECIFICATIONS:

	COUNTER POINT I	COUNTER POINT II	COUNTER POINT XL
BLADE:	4"	3"	6"
OVERALL:	9"	6 7/8"	13 1/8"
WEIGHT:	4.7 oz.	2.5oz.	7.9 oz.

ESPADA® SERIES

**NEW: NOW WITH U.S. MADE CARPENTER
CTS® XHP ALLOY BLADE STEEL**

Here at Cold Steel® we've never been afraid to break with convention. For us function is always paramount. Our knives are made to work; and when it comes to knives, bigger is always better.

That's why when everyone else in our industry was making the smallest, flimsiest, dainty little knives that they could, we released a series of blades that could only be classed as one thing - pocket swords!

Inspired by the classical Navaja knives of Spain, but utterly modern in both appearance and materials, these mega-folders became an immediate sensation!

A design collaboration between celebrated custom knife maker Andrew Demko and Cold Steel President Lynn C. Thompson, the Espada® series are a perfect amalgam of Demko's engineering genius and Thompson's vast knowledge of edged weapons and tools.

Available in three sizes to suit the bold, the bolder and the boldest, these huge high performance folders are actually surprisingly easy to carry. Expertly designed to fit comfortably in your pocket, you'll soon forget that you are carrying such a large and impressive blade.

Built to snap into action in a flash thanks to our patented Demko Thumb Plate, the Espadas® can be snagged on your pocket, actually opening the knife as you draw it - and bringing it in to play in the blink of an eye!

The Espada's beautiful, flat ground, blades are made from premium American CTS® XHP Alloy Steel. This USA powdered "super steel" was chosen for its ability to not only take a super-fine cutting edge, but to hold it for an exceptionally long time.

Each knife is hand honed to a level of sharpness that is more at home on a surgeon's scalpel, creating a level of cutting performance that simply is astonishing.

In order to protect your fingers from this wickedly sharp blade, each Espada® is equipped with our patented Tri-Ad® locking mechanism, proven to be the strongest lock in the world and virtually impervious to shock - making it almost impossible for the blade to close on your hand. In our own notoriously brutal product testing, the XL Espada® was not only capable of easily holding 600 lbs. of free hanging weight, but we even used it to support a hanging engine block!

These incredibly popular, world renowned knives are available in two distinct configurations.

Our classic Espada® series, which gained even more popularity after its appearance in the movie The Expendables (where it was carried and used by Mickey Rourke) features a rich satin polished blade, polished G-10 scales and positively gleaming 7075 Aluminum bolsters and frame.

G-10 ESPADAS

Alternatively, the Espada® series is also available in a slightly more slim-line, tactical "blackout" edition, with a hard-wearing DLC coated blade and matte black American G-10 handle scales.

Whether you choose the elegance of the Medium model or the sheer majesty of our giant XL version, or any of the knives in between, you can be sure that Espada® will be a talking point among your friends and loved ones for years to come.

SPECIFICATIONS:	BLADE	THICK	OVERALL	WEIGHT
ESPADA MED.:	3 1/2"	4MM	8 1/2"	6.1 oz.

RECON 1® SERIES

**NOW WITH U.S. MADE
CARPENTER CTS® XHP
ALLOY BLADE STEEL
FEATURING DLC COATING***

Our Recon 1® series continues to set a standard for Tactical Folding Knives that's hard to beat.

These tough, dependable knives have been a mainstay in the world of tactical knives for many years, with a hard earned reputation for reliability and strength.

A popular knife with Military and Law Enforcement Personnel, and Fire and Rescue crews as well as civilians who appreciate a hardworking, dependable tool for any occasion.

Sharp as a scalpel and tough as a tank, the Recon 1® Series is available with 2, 3, 4, and 5 1/2 inch blades, and every facet of their construction has been over engineered to make them as strong, durable and effective as humanly possible.

These Cold Steel® classics are thin, light, razor sharp and amazingly strong! Every model in this diverse series features our world renowned Tri-Ad® lock, making them almost impervious to shock and keeping your precious fingers safe from harm when using your knife in even the most taxing conditions.

From the sturdy little workhorse that is our Micro series to the beastly cutting power of our XL Recon 1 series and all the knives in between – whatever your mission, the Recon 1 is there for you!

AMERICAN LAWMAN® SERIES

NEW: NOW WITH U.S. MADE CARPENTER CTS® XHP ALLOY BLADE STEEL

Cold Steel® is proud to include a series of knives named in honor of, and expressly designed to serve, our brothers and sisters in Law Enforcement.

These rugged knives are designed to perform in the most extreme environments and shrug off the harshest abuse, while still remaining comfortable to use and easy to carry.

Their "Civilian Friendly" and intentionally non-intimidating drop point blades are still big and sharp enough for almost any task. The Lawman's blades are made from American CTS® XHP Alloy premium performance steel which is hollow ground to a thin, hand-polished edge and then DLC (Diamond Like) coated for ultimate endurance.

The American Lawman® series handles are also designed to be as versatile and user friendly as possible. Made from textured American G-10, and expertly sculpted for maximum grip security in even the coldest, wettest conditions they are fully ambidextrous and easily worn, carried and used whether you are left or right handed.

A lock failure on your folder is incredibly dangerous and may result in severely lacerated digits or even the loss of a finger - but if the lock fails on a police officer's knife, it could be a genuine disaster and result in loss of life! That's why we have provided each American Lawman® with our Tri-Ad® locking mechanism. Designed to withstand terrific impact forces and almost impervious to shock, it has passed the most gruesome torture testing in the industry.

AK-47® SERIES

NEW: NOW WITH U.S. MADE CARPENTER CTS® XHP ALLOY BLADE STEEL

Designed by celebrated custom knife maker Andrew Demko, the Cold Steel AK-47® series has proved exceptionally popular with Military personnel and Law Enforcement professionals.

Their American CTS® XHP Alloy Steel blades are vacuum heat-treated and sub-zero quenched for maximum toughness, then hollow ground by hand until they reach levels of sharpness only seen on a surgeon's scalpel. They are then DLC (Diamond Like) coated for corrosion and abrasion resistance, which also enhances the knives' already astounding cutting power by reducing friction.

Available in two sizes, the AK-47® is equipped with ergonomic American G-10 handles that offer an incredibly secure grip even when wearing thick gloves and working in cold or wet conditions.

These tough, hard use knives also feature a unique solid 6061 Aluminum pommel that can focus strikes, serve as an impact tool and function as a "less than lethal" option in a last ditch self-defense situation.

The AK-47® is also equipped with our state of the art, record breaking Tri-Ad® lock. Proven again and again to be superior to any other lock on the market today in terms of strength and shock resistance.

Finally, to assure fully ambidextrous and lightning fast access, each AK-47® comes with our patented thumb plate - allowing the knife to be drawn and simultaneously opened by snagging it on the edge of a pocket!

TI-LITE® SERIES

NEW U.S. MADE CARPENTER CTS® XHP ALLOY BLADE STEEL

Our Ti-Lite® tactical folders evoke the sleek speed and rebellious lines of the classic 1950's styled switchblade. Unlike most switchblades however, they are legal to carry nearly everywhere.

They feature CTS® XHP Carpenter Alloy blades with a bead blast finish, razor sharp edges, and sturdy, needle sharp points. The CNC milled handles are forged from super tough 7075 Aluminum billets (known to be as tough and strong as Titanium) and are given an attractive bead blast surface and finished with a protective EDP (Electric Discharge Plating) coating. And for maximum strength and safety, we have equipped our Ti-Lites® with our patent pending, stainless steel leaf spring locks (proven, in our tests, to hold up to 145 lbs).

For ease of carry, the Ti-Lites® come equipped with a small, but unobtrusive steel pocket clip, and can be opened rapidly by using the thumb studs or by snagging a quillon on the edge of your pocket as you draw your knife out.

Zy-Ex™ TI-LITES® IN AUS 8A STAINLESS

We know that many of our customers love the look of our Ti-Lites® but find the prices a little steep. This is the reason we decided to create some affordable alternatives. The Zy-Ex™ Ti-Lites® mimic the look of their more expensive counterparts almost exactly. Instead of 7075 Aluminum, we used 43% glass filled Zy-Ex™ for the handles and AUS 8A stainless for the blades. The results are extraordinarily lightweight knives that are remarkably strong, sharp and good looking, at a price almost everyone can afford.

RAJAH® SERIES

**NEW U.S. MADE CARPENTER
CTS® BD1 ALLOY BLADE STEEL**

A good Kukri, with its broad heavy duty blade, is a true power – able to cut, chop, slice and shear through even the toughest targets. An outstanding multi-purpose tool that can put in exceptional work, as well as serve as a truly devastating weapon during wartime or in a last ditch self-defense situation.

Inspired by this legacy of excellence, custom knife maker Andrew Demko developed our Rajah – a series of true folding Kukris that have proven to be instant classics!

Available in two sizes, and exhibiting many of the best Kukri-like characteristics, their unique blade shape presents their thin, flat ground edges at just the right angle so they naturally bite deep, making cuts that way exceed other knives of the same size and weight.

The Rajah handle also shares similar lines with traditional Kukris, with the addition of strategically placed curves and finger grooves for optimum grip and control.

To counter the incredible impact forces generated by chopping strokes, we have equipped the Rajah series of folders with our world renowned Tri-Ad® locking mechanism, which has proven itself again and again to be virtually impervious to shock.

Carry the Rajah series as you would any folder, using the clip to attach it to any reasonably sized pocket or clip it in your waistband. In an emergency all you have to do is grab it and open it in the conventional manner or snag its unique patented thumb plate on the edge of a pocket and snap it open with lightning speed.

So try our Rajah series today and experience for yourself the power of a Kukri that can fit in your pocket!

SPARTAN™

**NEW U.S. MADE CARPENTER
CTS® BD1 ALLOY BLADE STEEL**

The Spartans of old were legendary! A tough breed of warriors who were trained from childhood in the art of war. Engaging them – and their famous Kopis sword - was something to be feared and avoided at all costs!

Designed by Andrew Demko, our Spartan™ is a folding Kopis scaled down to accommodate a tamer, more sophisticated world.

Its hollow ground blade is made from American BD1 Alloy Steel, and was designed to echo the aesthetics and cutting performance of the world-renowned Kukri.

It's Kopis inspired handle is designed to help resist the pull of centrifugal force and to provide an incredibly safe grip. Injection molded out of Griv-Ex™ polymer with heat treated steel liners for additional strength it gives a whole new level of security and peace of mind.

The patented Demko thumb plate can be used to open the knife like a conventional "one handed opener" or be snagged on the edge of a pocket during the draw stroke and opened automatically. Additionally, the Spartan™ features our Tri-Ad™ locking mechanism, which has proven when tested to be almost impervious to stress strain and shock, offering a huge margin of safety hitherto unseen in the industry.

TALWAR™

NOW WITH U.S. MADE CARPENTER CTS® XHP ALLOY BLADES

Taking its inspiration (and its namesake) from the sinuous curves and renowned cutting power of the Indo-Persian sword, we are proud to present the Cold Steel Talwar.

A design collaboration between Lynn C. Thompson and Andrew Demko, the Talwar packs an astonishing amount of cutting power into a thin and lightweight pocket knife.

The largest of our Talwar folders boasts one of the widest blades available in the industry today. Made from American CTS® XHP steel, and almost 2" wide, the blade is beautifully flat ground, with a continuously curved edge, offering cutting potential that has been hitherto unavailable in a folding knife.

The Talwar's textured, ergonomic pistol grip handle is made from premium American G-10, with strategically placed integrated finger grooves for both comfort and safety.

For added safety, each of our Talwar knives has our Tri-Ad® locking system; which has proven itself again and again to be the safest lock in the industry.

The Talwar also comes equipped with Andrew Demko's revolutionary ambidextrous thumb plate. Open the knife smoothly and effortlessly with either hand, or draw-snap the knife on a pocket to open the knife at the speed of lightning!

HUNTER

NEW
ULTIMATE HUNTER

A design collaboration between custom knife-maker Andrew Demko and Lynn C. Thompson, the Ultimate Hunter represents the culmination of almost 3 years of design evolution.

Exhaustively field tested on 4 continents – the Ultimate Hunter has processed and field dressed everything from boar to buffalo – and it has proved its worth time and time again!

Made from American XHP steel with a Rockwell hardness of 60-61, the Ultimate Hunter is hand-ground to a razor edge that will last an amazingly long time.

Its blade is continuously curved from Ricasso to tip, with lots of belly for skinning game and a drop point to enable the deft slicing of the body cavity without puncturing the viscera.

The heavily bead blasted, CNC machined American G-10 handles are comfortably smooth, while still giving a very secure grip even with wet or bloody hands.

Equipped with a super-strong Tri-Ad locking mechanism for extra safety, the Ultimate Hunter is a pure thoroughbred hunting outdoorsman's blade - practical, functional and incredibly capable!

VOYAGER® SERIES

NEW U.S. MADE CARPENTER
CTS®BDI ALLOY BLADE STEEL

Our Voyager® series is the true "everyman" knife. Lightweight, comfortable, super sharp and appropriate in almost any environment – they are rugged, dependable and perfect for hunting and camping as well as general utility and daily cutting chores.

The Voyagers can also readily fill specialty functions – excelling in many survival and rescue applications, they are very popular with Police and Military personnel, who appreciate the combination of cutting performance and safety that the Voyagers® offer.

There are very few knives in the world today that can compare to the Voyager®.

Ounce for ounce, they're far stronger than 99.9% of our competitor's folders, and each knife in our extensive Voyager® series is precision engineered and held to our most exacting standards.

Our incomparable Tri-Ad® locking mechanism – which remains the most secure and shock resistant lock on the market today – safely protects your fingers from the Voyager's® extra thick and extra wide razor sharp blades.

A highly functional and ergonomically superior Griev-Ex™ handle (reinforced with heat treated 6061 aluminum liners) provides both great comfort and a secure grip even under extended use in tough conditions.

Available in a wide range of sizes and with numerous blade and edge configurations, there's a Voyager® for everyone.

NEW LUCKY

The "Lucky" is our modern re-invention of the classic Gentleman's pen knife. Designed by Lynn C. Thompson and Andrew Demko, this exquisite, expertly engineered knife is the ultimate upscale pocket / pen knife. Astonishingly lightweight, barely moving the scale at a little over 1 oz., the Lucky is utterly effortless to carry.

Carry it in a pocket, or use the removable pocket clip to wear it with dress pants or lightweight summer slacks, carry it in a thin shirt pocket or even use it as a tie clip, it is so thin and light you'll forget you even have a knife – but it's always there when you need it!

Made to the highest standards and with the very best materials, the Lucky packs an astonishing amount of capability into one very discreet package.

Its twin blades (one plain edge, one serrated) are made from premium CTS[®]XNP Alloy, hand fitted and securely nestled between two-tone polished carbon fiber scales – and with an RC of 60-61, the Lucky takes a razor edge that will last!

The Cold Steel Lucky is destined to become the quintessential Gentleman's carry knife. Stylish, unobtrusive, elegant and legal almost everywhere in the world, it's a versatile knife that will serve you well for a lifetime and beyond - and look beautiful doing it!

NEW RANCH BOSS

We are proud to announce what we feel is destined to be the world's premiere production Stockman Knife - our Collector's Edition Ranch Boss!

Limited to 600 unique pieces, the Ranch Boss echoes elements of the classic lines and elegant design of our long-discontinued and much admired Country Classics Series, but newly upgraded with some of the highest quality materials in the industry today.

100% USA made, the Ranch Boss features three strong, sharp and durable hand-ground and satin polished CPM S-35VN Steel blades – Classic Clip Point, Sheep's Foot and Spey Blades – authentic Amber Bone Stag Scales and all nickel silver bolsters, liners and pins.

This upgrade to superior high-end materials ensures cutting capabilities rarely seen in even the most expensive custom knives, and the edge on this truly beautiful traditionally styled working man's knife has the potential to last a lifetime without re-sharpening!

A highly collectible knife that would make a wonderful gift and keepsake as well as a treasured heirloom to pass on to future generations.

TUFF-LITE™ SERIES

Tough enough to do the job and light enough to be handy, Cold Steel's Tuff-Lite folders are there when you need them. They're perfectly sized to slip into a pocket, clip to your waistband, or wear around your neck on a lanyard.

Offering wide, hollow ground, 2 and 2 1/2 inch blades, they are mercilessly sharp and can shear through the toughest materials with unexpected ease. And, due to their slant point, they offer deep penetration and precision cutting potential without appearing aggressive enough to draw unwanted attention.

The Tuff-Lite folders are bred for work and offer a surprisingly good grip due to their superbly engineered handles. Made of Griv-Ex™, they offer an enormous strength to weight ratio and feature our state of the art Tri-Ad® lock, which gives them astonishing muscle for their size.

Small and inconspicuous, yet strong and tough enough to prevail in an emergency, they make terrific companions for all walks of life.

SWORD CANES

We have been intrigued with the potential of sword canes ever since Major Morris Wright used one to grievously injure Jim Bowie in their famous fight on the Vidalia Sand Bar so many years ago.

There are few weapons that can be put into action faster than our sword canes. Just give the handle a firm tug and the blade will literally leap into your hand!

ALUMINUM HEAD SWORD CANE

This elegant sword cane is similar in appearance to our City Stick and comes with a removable 6160 Aluminum head so that it can be engraved and personalized if you so desire. It features a fiberglass carbon fiber composite shaft that's virtually unbreakable and can be used as a weak hand parrying tool or an emergency bludgeon.

The blade has a tapered square cross section with a wickedly sharp point.

NEW PISTOL GRIP SWORD CANE

We are proud to announce the re-release of our classic pistol grip sword cane.

Now with a finely crafted solid Aluminum head, our pistol grip cane is far lighter, better balanced and easier to carry and use than ever before!

HEAVY DUTY SWORD CANE

Our design concept for the Heavy Duty Sword Cane was to make a cane that offered significant support, and be stylish enough so that it didn't look like a stodgy piece of medical equipment.

The result is a very appealing cane with an extra strong partial crook handle made from heavy duty nylon, with a black, aluminum shaft that's 2mm thick and heat-treated for strength. The shaft is handsomely tapered and capped with a thick rubber ferrule for better traction on slick, icy sidewalks or uneven terrain.

The concealed sword is easily released by a hard, quick tug on the handle to break the suction of its friction lock. It's an extremely formidable sword too, made from 1055 Carbon steel, a little over 24" in length and 5.5mm thick. It's sturdy enough for both cutting and thrusting, with one long cutting edge, a strong sharp point, and a fully sharpened back edge.

BUTTERFLY SWORDS

Prior to World War II, the Butterfly Sword was virtually unknown outside of southern China. This changed at the close of the 1940's, when the Communists took control of mainland China, forcing many Kung Fu masters to flee the oppressive regime and establish new schools elsewhere. Currently, due to the spread of Kung Fu, these once obscure swords have become quite popular.

Typically, Butterfly Swords come in pairs that are cleverly nested together so they appear to be one sword not two. When they are drawn, they can be quickly separated and wielded in both hands to make wickedly effective chops, slashes and thrusts.

Our battle worthy blades are 15" long and 2 5/8" wide. The handsome slip-proof grip features carefully selected hardwood covered with attractively braided cord. The "D" shaped guard has a long forward quillon, so it can both deflect and trap various opposing weapons.

GIM SWORD

There are two basic types of straight bladed swords used in China. One is fairly long and heavy known as the Wu Jian or "Martial Sword". The other is substantially lighter and called a Wen Jian or "Scholar's Sword" and was primarily carried for personal self defense.

After studying books and video tapes on the history and use of both weapons, we decided to make our own battle worthy Gim (Wu Jian) for serious collectors and practitioners of Chinese Martial Arts.

The blade of our Gim is made out of 1055 carbon steel and measures 30" long by 1 1/4" wide. For cutting and slashing, both edges are quite sharp and they terminate in a strong, useful point of stabbing. The traditionally styled guard andommel are cast out of thick sturdy brass and fit snugly on a stout Rosewood handle that is both highly decorative as well as functional. The Gim Sword comes with an excellent wood scabbard with brass throat, chape and sword rings, so that it can be worn suspended from the belt or slung over the shoulder.

CHINESE WAR SWORD

There are few swords in the world that are more intimidating or more effective than the two handed Chinese War Sword. For centuries it has been wielded by both peasants and soldiers alike with devastating results. Its huge wide blade will shear through armor as if it were butter, not to mention mere flesh and bone. There is nothing clumsy or awkward about this sword.

Its 14 1/2" cord wrapped grip, "S" shaped guard, and steel ring shapedommel all work in concert to make it a well balanced weapon that's unbelievably fast and agile.

It comes combat sharp and is protected by a stunning, heavy leather scabbard of exceptional workmanship. Order your sword with confidence as we are convinced you will be more than delighted with the sword's fit, finish, materials, and above all, performance!

STEEL: BLADES ARE MADE OF DAMASCUS STEEL

THE BATTLE GIM AND THE JADE LION SERIES ALL FEATURE BLADES MADE FROM DAMASCUS STEEL

JADE LION SWORDS

The concept of the guardian lion emerged in China over 1800 years ago during the Han Dynasty. The lion, fierce, courageous, loyal and swift, was the perfect symbol to guard home and hearth. Both decorative and symbolic, it was common to see elegant sculptures of these lions guarding the homes of the wealthy and aristocratic or even the gates of the Imperial Palace and the tombs of the Chinese Emperors.

Our Jade Lion series draws upon the same protective reputation, combining ceremonial, "dress" styling with "battle ready" performance. This makes them appropriate for collectors specifically as well as martial artists in general.

The watchful Chinese lion motif is cast in nickel-silver with almost sculptural detail on the heavy guard and pommels. This provides a compelling contrast to the elegant jade green color of the cord wrapped handles and matching rosewood scabbards that are covered in highly polished samé (ray skin) that's dyed to match the handles.

The most attention grabbing feature, however, are the blades themselves. Forged by hand and expertly tempered from our finest Damascus Steel, their distinctively subtle swirl pattern bespeaks the elegant beauty of fine craftsmanship combined with the strength of Damascus.

JADE LION GIM: The Lion Gim is a civilian self-defense Wen Jian (Scholar's Sword), with a little more panache than the practical versions (like our own Gim Sword) that were made for the battlefield. In our tests it severed and pierced 4" bamboo poles with a single cut or thrust.

JADE LION DAGGER: A perfectly scaled down version of the Gim, it shares the same design, materials and exquisite craftsmanship of its larger counterpart. It's perfectly balanced, big and strong enough to stand on its own or fight alongside its bigger brother.

BATTLE GIM

While researching traditional Chinese weapons near Shanghai, we visited a distinguished collector who had an ancient Wu Jian, or battle Gim. Its appearance and martial spirit were so unique and impressive that it warranted being reproduced for Cold Steel's customers.

The Battle Gim is forged from our best Damascus Steel by talented smiths, it features a broad symmetrical point and a slightly wider, heavier blade than custom would dictate. This gives it a more pronounced blade-heavy balance making its twin razor-sharp edges slightly more suitable for cutting and slashing than thrusting.

The attractive Rosewood hilt is framed by a blackened iron guard andommel. They're embellished with an intricate filigree of traditional Chinese Peony flowers and leaves. The matching Rosewood scabbard is styled in a similar fashion on its chape, throat and ring mounts.

Radiantly polished, with twin combat sharp edges, this is not only a vividly striking Gim, but one that you can stake your life on in battle.

NORMAN SWORD

The Norman lust for battle and ravenous desire for land and treasure can, like their famous sword be undoubtedly traced to their Viking forefathers who wrenched their homeland in northwestern France from the hands of Charles the Simple in the Treaty of Saint-Clair-sur-Epte in the year 911 A.D.

Never satisfied with their lot, it wasn't long before they once again took up their broad, double-edged swords and set sail across the English Channel to conquer Britain most famously, at the battle of Hastings in 1066 AD.

Now Cold Steel is pleased to offer you our battle ready version of this famous sword. Like the originals we have studied, and the trainers our President Lynn C. Thompson spars with, it offers a long wide blade with combat sharp edges and a very useful point.

To insure it's light enough to be easily wielded with one hand we have also added a single broad fuller in the center of the blade that serves to reduce weight, improve balance and add the stiffness needed to withstand heavy blows.

The hilt of our Norman Sword is also reminiscent of many surviving originals with upturned, spatulated quillons, leather-over-wood grip, and a modified "cocked hat" pommel. This pommel shape was specially chosen because it allows more room for the hand, while counter balancing the blade and serving as a weapon in its own right.

ITALIAN LONG SWORD AND DAGGER

The era of the long sword spanned almost three centuries (approximately 1350 to 1650). This, undoubtedly, was because it really worked! It featured a distinctive cruciform hilt and a long, double edged blade and was equally adept at opposing both light and heavily armored foes. You see, its extra long blade offered the reach and leverage for powerful stabbing, cutting and chopping strokes while its long cross guard and heavy pommel were useful for hooking, striking and smashing. When heavy plate armor was encountered, blows with the edge were marginally effective and were often abandoned in favor of a "Half-Swording" technique; where one hand grips the hilt and the other the blade to better direct the point in powerful jabs, and to more accurately thrust at the small gaps and joints present in a suit of armor.

Having read S.M. Stirling's "Change" series of science fiction novels about a world that loses 600 years of technological evolution overnight (an event called "The Change") at least a dozen times each, has left our President Lynn C. Thompson quite taken with the many virtues of the Long Sword and inspired him to make a Cold Steel variation.

Modeled on the Italian concept of sword design, the blade and balance slightly favors thrusting attacks, however, its cutting edges are astonishingly effective too and can deliver some down right ferocious blows. Additionally, its simple cruciform hilt is also all business with a long upturned cross guard, leather-over-wood grip, and a counter balancing fish tail pommel.

ITALIAN DAGGER

Since our Italian Long Sword is light and well balanced enough to use in one hand we thought we'd offer a companion dagger to take the place of a shield, targe, or buckler. Scaled down in size but almost identical in appearance, its sharply tapered, double edged blade slightly favors attacks with the point over the edge and is stiff and strong enough to parry any sword.

TWO HANDED GREAT SWORD

Our Two Handed Great Sword is one of the biggest swords we make. But don't let its size fool you, as there is nothing awkward or clumsy about this awesome sword. Sure, it's big and meant to be carried over the shoulder instead of in a scabbard, but it's extremely well balanced and easily wielded by people of larger stature and physical strength.

To protect the hands from opposing weapons, it features a large guard with side rings plus integral parrying hooks that allow the blade to be shortened for close range slashing and stabbing attacks.

The handle is made of wood and covered with leather and is extra long to afford a full two handed grip.

What's more, it's capped by a heavy steel pommel that helps counter balance its long blade and serves as an effective weapon in its own right.

The Two Handed Great Sword is sturdy, strong and battle ready. If you're looking for the ultimate in big performance oriented swords, your search is over.

HAND AND A HALF SWORD AND DAGGER

We would be hard pressed to think of a more versatile or effective sword than the "Bastard" or "Hand-and-a-Half Sword" we offer here. For a sword of this size, it's amazingly light and fast and tips the scales at approximately 3 lbs. Its 33 1/2" long blade is quite wide so it can produce deep shearing type cuts yet pointed enough to be effective in a thrusting attack. Its long handle is suitable for both a one or two handed grip and is fashioned out of wood covered in black leather. To balance the long blade we have capped the butt with a beautiful "scent stopper" pommel, which can be a lethal weapon in its own right.

A companion dagger is also available. Scaled down in size and almost identical in appearance, it offers a 13" long blade designed to cut and thrust, yet be sturdy enough to stand in for a buckler in defensive roles.

Every Hand-and-a-Half Sword and companion dagger reflects the highest standards in workmanship and materials and comes combat sharp and ready for battle. To safely house their keen blades we have also included very attractive scabbards made of wood covered with black leather with a steel throat and chape.

VIKING SWORD

The Viking sword of the 9th and 10th centuries featured a long wide blade with a broad central fuller and two keen edges. The preferred stroke was a hard slash or chopping blow, so the point was fairly rounded yet acute enough to be useful for thrusting. A simple guard with forward curving quillons was often utilized and combined with a utilitarian wooden handle that was covered with leather, bone, or even cast in brass.

But, what really made the Viking Sword so distinctively recognizable from its contemporaries was its heavy 5 lobed pommel used to balance the long blade.

Our sword has features in common with its historical counterpart. It has a double edged blade, hand forged out of Carbon steel and then polished to a brilliant lustre. The wooden handle is covered in leather and is supported by a simple, elegant guard at one end and a 5 lobed pommel at the other. Both guard and pommel feature Celtic knot embellishments.

To house the keen double edge blade, the Viking Sword comes with a wood scabbard covered in black leather and reinforced with a highly polished steel chape and throat.

TALWAR SWORD NEWLY REDESIGNED

The Talwar is one of Lynn's biggest passions. He has been fascinated with this historically significant sword for decades and has made it his personal mission to bring the highest quality modern Talwar to a new international audience.

Our Talwar is the culmination of years of experimentation by Lynn and his team. After extensive research and studying a variety of antique examples, Lynn sought out training and advice from the knowledgeable and talented Shastar Vidya Martial Artist, Nidar Singh Nihang who gave him valuable insight into the traditional combat application of the Talwar.

Lynn's tests with newly modified prototypes backed up the accounts he read in D.A. Kinsley's books which extolled the astonishing cutting potential of these curved blades.

He said "I began exploring the draw-cut with the new prototypes and the cuts were so effortless that it seemed like magic!"

With its hand-forged and beautifully balanced combat sharp blade, the Talwar features an entirely re-designed solid brass hilt that will accommodate even a large gloved hand. Supplied with an excellent wooden scabbard covered in black leather and fitted at either end with a highly decorative brass throat and chape; our new Talwar is an effective sword that will serve you well on or off the battlefield.

SPECIFICATIONS:

WEIGHT: 38 oz. THICK: 1/3"

STEEL: 1090 HIGH CARBON

SHAMSHIR

The Shamsir originated in Persia. Its strongly curved blade was enduringly popular and absolutely ideal for delivering a devastating cutting stroke. And, contrary to popular belief, it was very effective at delivering rising, descending and hooking style thrusts! Typically, the curved Shamsir blade

had a narrow cross section and a sharp point. It had a simple brass or steel crossbar hilt and an equally straightforward handle made from wood or animal horn that terminated in a distinctively bulbousommel. Thisommel was offset slightly to help the hand resist centrifugal force when making a hard cutting stroke.

Our version of this historic saber replicates the original as closely as possible. The only modifications were to substitute a modern Carbon steel for the blade and to use black faux buffalo horn for the handle. Even the scabbard is a close copy of the original. It's made of thick, black leather (so it won't dull the blade) and reinforced by a brass throat and chape, and comes complete with dual suspension rings.

1917 SERIES SWORDS

Our 1917 series - whether it's an historically inspired Naval classic like our Cutlass or an original design like our Frontier Bowie - are instantly recognizable!

With their deeply blued blades and rich Rosewood handles they are as attractive as they are functional.

No mere wall hangers, these fully sharpened knives and swords all share the same sleek lines, and utilitarian, practical design.

Evoking a spirit of adventure, whether it's the American Frontier or the High Seas, our incredibly popular 1917 series of swords, sabers, cutlasses and knives are perfect for any historical reenactment group from the 1830's onward - Cowboy Action Shooters, Civil War or Naval Battle reenactment, even modern military groups. These truly battle ready blades are ready for any adventure!

1917 FRONTIER BOWIE:

The Frontier Bowie features a wide, hand-sharpened blade with a generous clip and huge fuller. Made from 1090 High Carbon Steel, it is heat treated to a hard spring temper and beautifully blued to a lustrous finish.

The Frontier Bowie's handle is a perfect accompaniment to its battle-ready blade. Its big "S" shaped guard offers excellent hand protection while the slim, flat profile stops it from twisting in your hand and keeps your edge alignment true. Its modified pistol grip also keeps the knife locked safely in your hand even when utilizing a palm reinforced grip for extended reach and leverage in the thrust. It comes complete with a high quality leather sheath with a blued steel throat and chape.

1917 CUTLASS:

In 1917, the U.S. Navy decided to replace its Model 1860 cutlass which had been in continuous service for 57 years, with a new model. Cold Steel's® modern recreation of this classic fighting sword is as authentic as possible. Our 1917 Cutlass features the signature 25" curved blade and a half basket guard that are stamped out of heavy 18-gauge Carbon steel, and both the blade and guard are blued to resist rusting. The scabbard is an accurate reproduction of the original and is made of high quality leather and features brass and copper fixtures.

IMPROVED 1917 CUTLASS:

The Improved 1917 Cutlass features a short, stiff, razor sharp and beautifully blued blade which is both fast and fluid in the hand. It's perfectly designed guard has a sturdy reinforced rolled edge for added strength and hand protection while still being small enough to lie comfortably at your side without ever being cumbersome or unwieldy.

Similar in size to many of the "tactical" swords offered by our competitors, while being vastly more capable and versatile, the Improved 1917 Cutlass is able to catch, parry, block and oppose even far larger and heavier weapons while being sharp and nimble enough to dominate almost any engagement. And, when combined with a pistol or revolver, it becomes a Close Quarter and Melee monster!

1917 SABER:

While not an exact copy of a pre-existing or historical saber, our 1917 Saber has a lot to offer the modern swordsman. The blade is moderately curved with a short bevel grind and a long narrow fuller. When combined with a short, sharp, clip point, these features make for a very stiff, strong blade capable of delivering fearsome cuts and thrusts while shrugging off abuse that would break a lesser sword. To help protect it from rust, each blade is polished before being deeply blued to inky black perfection.

The 1917 Saber features a unique 3/4 basket guard. It offers complete protection to the fingers and vulnerable thumb and, when presented correctly, protects the user's hand, wrist, and forearm. Crafted from heavy gauge steel plate with rolled edges, multiple "lightening" holes (which won't admit a sword or dagger point), and deeply blued like the blade, it's sturdy enough to absorb or shed the most horrendous blows.

It comes complete with a high quality leather scabbard that sports a thick, polished brass throat and chape.

OFFICER'S FIVE BALL SPADROON

In the age of sail, officers were expected to fight right alongside common deckhands. An officer never made his choice of weapon recklessly when he knew he had to fight hand to hand to repel boarders. The clear choice was a Spadroon as his primary edged weapon. It was lighter than a cutlass, offered a long, stiff blade, was imminently suitable for thrusting, and had a sharp edge capable of delivering a stinging cut.

Original antique Spadrons are quite scarce, and far too valuable to use as actual weapons, but luckily you can get a Cold Steel reproduction. Loosely modeled on historical examples, our Spadroon has been hardened to a spring temper, with a combat sharp edge and is capable of delivering a fearsome cut as well as a lethal thrust. It's handsome too, with a multi ridged faux ivory grip and a gorgeous brass hilt replete with the requisite five ball counter guard and knuckle bow.

Not to be outshined, the scabbard is equally impressive. It's fashioned from rich black leather, and hand stitched, and comes with a mirror polished, solid brass chape, throat, and carrying rings.

FIVE BALL DIRK

At our president, Lynn C. Thompson's insistence, we've produced a matching dirk as well. Highly evocative of the large Spadroon, the Five Ball Dirk offers a rigid double-edged blade, faux ivory grip, brass guard with integral five ball counter guard and a rich black leather and brass scabbard.

CIVILIAN SABER

The Cavalry Saber reached the height of its popularity during the Napoleonic wars. It was a very effective weapon of war, used both by officers on foot as well as troopers mounted on horseback.

But, it had one drawback - it was much too cumbersome for civilian use. Even the lightest models were too long for practice daily carry. Additionally, the multiple bar hilt (which protected the hand from an opposing blade) had the potential to catch, snag, or hook on objects in passing.

The solution was to scale the military saber down to about the size and weight of a Small Sword, modify the knuckle bow and add a folding guard. This modification allowed the civilian saber to be worn much closer to the body and on lighter belts and baldrics.

Worn for self-defense, or as a sign of authority, it shortly became a common military dress accessory, even to this day.

Our modern interpretation of the classic Civilian or Military Dress Saber is hand forged with a hard spring temper, and sports a narrow, modestly curved blade that terminates in a wicked point. Stout enough to defend against much larger weapons, yet light enough to be fenced elegantly from the fingers and wrist like the finest Small Sword, it can outmaneuver more ponderous blades while remaining ready to deliver a telling blow or lightning quick thrust.

Featuring a highly detailed British lion motif on the hilt and matching folding guard, as well as a luxurious leather and brass wire grip, this Saber is elegant enough for the most formal occasions, and sure to endure for generations.

CIVILIAN SABER SABER

1830 NAPOLEON SABER

Napoleon's cavalry was the bane of the European battlefield. While his horses were second string, his swords were absolutely first rate. They were manufactured in a state of the art factory dedicated to producing the finest edged weapons of the day.

The medium weight saber we are offering here possesses excellent cutting and slashing capabilities yet still remains useful for a thrust.

In appearance, it very closely resembles the U.S. 1860 Light Cavalry Saber, but in actuality is a far more effective and durable weapon. The moderately curved blade is forged out of 1055 Carbon Steel and features a long, wide fuller and a very sharp, practical point.

The grip is equally well made. It's wrapped in black leather and strongly protected by a stout, brass three bar hilt. The whole package comes with a heavy duty polished steel scabbard with dual rings so it can be easily attached to your baldric or sword belt.

1796 LIGHT CAVALRY SABER

This saber was widely used by the British and their Prussian allies under General Blucher in the Battle of Waterloo. The blade's profile was derived from the ferocious Indian Talwar and was reviled by the French who strongly protested its use due to the horribly destructive wounds it inflicted. In fact, this saber was so successful as a cutting weapon that the German Cavalry continued to use it right up to the beginning of the Twentieth century!

If you want a combat quality saber that will pass the British Proof Test and is fully capable of shearing off arms and even legs with a single blow, this is a must have! It comes with a sharpened forward edge and your choice of a wood and leather scabbard with steel mounts and fittings, or an all metal scabbard.

U.S. 1860 HEAVY CAVALRY SABER

At the outbreak of the American Civil War, there were two types of sabers issued to the Federal Cavalry: "light" and "heavy". The light version was popular, but the heavy model, dubbed the "Old Wrist Breaker" was the one worth owning, as it was a superior weapon. Its 36" blade offered big reach advantages over most sabers, and its substantial weight gave it the leverage to easily crush bones and sever limbs or even a head with a single blow. The brass guard had three bars to protect the hand and the grip was wire bound leather and capped with a sturdyommel.

In its double ringed, steel scabbard, it could be easily attached to a saddle or to a belt.

After examining and handling a number of original 1860 Heavy Cavalry Sabers, we decided to make our own reproduction with a few improvements. Our blade is made from 1055 carbon steel with a hard spring temper and will pass the British Proof Test.

1908 BRITISH CAVALRY SABER

What makes the ideal Cavalry Saber? In the charge you need a narrow, stiff blade with a sharp point, whereas in the mêlée, on an immobile horse, you need a wide, curved blade for cutting and slashing.

The British pondered this dilemma and in 1908, settled on a saber that favored the thrust.

It had a narrow 35" long blade, a thick cross section and a sharp point. To protect the hand and forearm, it had a bowl shaped guard and a grip that automatically brought the point "in line" for the thrust. It was also effortless to carry, as its scabbards two rings allowed it to be suspending from the saddle or to a belt or baldric.

We are proud to offer our modern interpretation of this extraordinary weapon. Closely modeled on the historic original, but with a marginally lighter steel bowl guard for improved balance and handling, and a more durable polymer grip.

In our tests, this saber has proven capable of being fenced like a fine Rapier, while still delivering effective cut and thrusts from the saddle.

GROSSE MESSER

Known throughout Germany as the "Big Knife", the Grosse Messer hails from central and northern Europe where, in far off days of old, noblemen and peasants alike relied on it to protect hearth and home from the ravages of brigands, cut throats, outlaws and other assorted characters of ill repute.

Due to its stout, wide blade and generously sized handle, it could be wielded in one or both hands and was capable of shearing through chain mail and much more.

Our version of this elegantly simple yet remarkably effective weapon sports a hand forged blade of 1055 carbon steel that's so sharp we have used it to split a telephone book in half, with a single blow!

The guard and heavy pommel are made from blued steel and feature rosewood handle scales riveted to the sword's full tang.

For convenience and safety, the Grosse Messer comes with a strong, handsome scabbard crafted from wood and covered in black leather. It is reinforced with a steel chape and throat that has been blued to match the guard and pommel.

SCOTTISH BROADSWORD

The traditional weapon of the highland clansman, this sword has sown fear into the hearts of Englishmen for centuries.

Its long, two-edged blade and distinctive basket hilt, if combined with targe and dirk has proven to be more than a match for enemy soldiers on battlefields the world over.

Now Cold Steel® has chosen to make our own replica of this famous weapon. Our double-edged blade is hand forged and beautifully polished with triple fullers. The stout basket hilt is made of blued steel with a wood grip covered in Samé (ray skin) and decoratively wrapped in wire. Each broadsword will pass the stringent British Proof test and comes with a wood and leather scabbard that's complemented by a blued steel chape and throat.

SCOTTISH DIRK

The Scottish Dirk that most knife enthusiasts are familiar with these days is, more or less, a piece of rubbish - a prop - a costume accessory for stage and screen.

It's declined into a "knife like object" that people hang above their mantles or on the walls of wood-paneled dens.

Our version is a modern replica that harkens back to an earlier form, when the dirk was a functioning tool and weapon. The 13" blade is forged to a hard spring temper from 1055 carbon steel. It's 1 1/2" wide and comes combat sharp and battle-ready.

COLICHEMARDE SWORD AND DAGGER

The Colichemarde emerged in the late 1600's during the decline of the Rapier and the rise of the small sword. Its long suit was its uniquely shaped blade that was extra wide at the forte then stepped down or narrowed for the rest of its length, ending in a point. The advantage of this was it allowed the sword to be used to parry or oppose even the heaviest weapons without breaking, yet remain light enough to take full advantage of its lightning quick point.

Our blade mirrors the original design concept with an extra long and wide forte that abruptly tapers down to an acute and deadly point. The hilt features a decorative, yet highly functional, double shell guard, complete with finger loops and knuckle bow, while the grip is completely wire wrapped and capped with a matching pommel.

Additionally, we have also created a matching dagger with a beautifully ground and polished blade, double quillons, and wire wrapped handle.

RIBBED SHELL SWEPT HILT RAPIER & DAGGER

The Rapier enjoyed a long reign as the civilian weapon of choice for self-defense and dueling for centuries!

Its long, slim, double edged blade was ideal for delivering point oriented blows at a great distance while still being able to deliver a significant raking cut. Its elaborate hilt (constantly evolving from rings, bars and quillons, to shells, and chiseled cups) offered excellent protection and caught or deflected blows at the sword hand and forearm with ease.

Sadly, while never proven ineffective or obsolete, the rapier eventually succumbed to the dictates of fashion and gave way to smaller swords.

Our version has a long, narrow blade, and is beautifully polished with a single wide fuller to assure perfect balance.

Its hilt features a classic ribbed shell and multiple bars, quillons and a knuckle bow for unparalleled hand protection. The grip itself is made of wood covered with rich black ray skin and decorative wire and terminates in a heavy ribbed pommel that serves as a perfect counter balance to our Rapier's long blade.

Our Parrying Dagger, with its elegant double edged blade and upturned trapping quillons, has been designed to perfectly complement our Rapier. It is not only the ideal off-hand parrying tool for the Rapier, but an exquisite Dagger in its own right.

SMALL SWORD

The advantage of the sword point over the edge became evident by the end of the 16th century. The Rapier, with its long elegantly thin profile, which emphasized its point, became the popular choice in civilian self-defense. It was, however, an unwieldy weapon, especially when it was used in narrow, crowded streets and alleyways. Eventually, by the end of the 17th century, a more sophisticated, shorter and lighter version of the Rapier emerged, the Small Sword.

Its primary advantage was its stiff, lightweight blade which was forged in a triangular cross section. The hilt (compared to the Rapier's) was simple and smartly functional, consisting of no more than an elliptical plate, or two shells and a knuckle guard.

Our version duplicates the original model's best features, but uses modern materials like 1055 carbon steel, heat treated to a tough spring temper. The hilt features two shells with functional finger loops and a light, but exceptionally strong, knuckle guard.

The Small Sword comes complete with a very attractive leather scabbard that features an intricately decorated throat and chape.

ARMED FORCES DRESS SWORDS

We heartily approve of our brothers and sisters in the Armed Forces wearing dress Swords and Sabers, and we think it is a shame that until now, they have been forced to resort to purchasing un-sharpened, poorly tempered wall hangers to carry at their side.

We believe that modern day warriors should be equipped with the finest equipment, even on ceremonial occasions.

That's why we decided to release our own series of Swords and Sabers that are truly battle ready and worthy of the combative lineage of the blade, and of the warriors that are carrying them.

Expertly forged, heat treated and spring tempered for high performance, their highly polished blades are then finely etched then painstakingly hand honed to a sharp edge.

Each sword is sold complete with a functional and durable scabbard that can be worn on a belt or hung proudly on display when not in use.

NEW THOMPSON SABER

The Thompson Saber is not a historical or period-specific sword, rather it is a newly developed, thoroughly modern fighting saber.

Designed by Cold Steel President Lynn C. Thompson, and bearing his name, the Thompson Saber was created to Lynn's exact specifications.

Having studied and trained in Western, Japanese and Filipino fighting arts for decades, Lynn has sparred with everything from short lightweight machetes to two handed broadswords. The Thompson Saber combines all of Lynn's favorite traits from a wide range of sources.

Lynn said: "I wanted to make a battle sword. Not a dueling sword as such, but a true sword fighter's sword for the modern martial artist. I believe that the edge is superior to the point when facing multiple opponents. You have

more opportunities to defend, counter, riposte and move without becoming transfixed on an opponent for a vital second – therefore, while it does thrust well, the Thompson Saber is a cutting tool first and foremost, on foot or on horseback."

"It's ground to my exact specifications; hair shaving sharp for the first six inches from the point, then gradually less sharp down through the rest of the blade, leaving enough material to block, parry and even bludgeon an opponent's blade. It's deeply blued to aid in rust resistance, but also to make the blade harder to see in the fast paced cut and thrust of combat."

It has a modified 1904 Saber guard, offering amazing hand protection and a sizeable ray skin wrapped handle that will accommodate even big modern fencer's gloves.

"I designed this sword to be able to make deep cuts even with a flick of the wrist, and it makes monstrous cuts when "drawn" through the target. If you study bladed arts and appreciate the combative potential of the sword, I'm sure you'll love this saber!"

The Thompson Saber comes complete with a heavy duty thick leather and steel scabbard with a leather belt frog for ease of carry.

THOMPSON SABER

1815 FRENCH OFFICER'S SABER

One of the finest swords in Napoleon's army was the specialist custom made Saber that was forged for his Lancer Officers.

With a beautiful, moderately curved blade and a sharp point, and equipped with an excellent three bar hilt – it was a good all-round Saber that performed well both as a Cavalry weapon and on foot.

From its highly polished and elegantly etched blade, to its intricately decorated solid brass furniture and hilt, it's truly a vision to behold!

Modelled after an antique original in a friend's collection, our faithful reproduction comes with a highly polished, battle ready blade, a wire wrapped leather handle, polished stainless steel scabbard and a truly beautiful, highly decorated three bar hilt.

1815 FRENCH
OFFICER'S SABER

88RS
RUSSIAN
SHASQUA

RUSSIAN SHASQUA

The Shasqua is an exceptional saber, favored throughout Russia, specifically by the fierce Cossack warriors who first popularized its use. With its long, broad curved blade and a stout thrusting point it is capable of making huge cuts!

Its most distinctive feature however, is its handle, which fits flush into the mouth of its scabbard. The Shasqua's down-turned pommel can be used to facilitate a lightning fast draw both on foot and on horseback. The Shasqua favors a fighting style that keeps the blade in a continuous whirling motion - compensating for its lack of protective hand guard, and making the most of its ferocious cutting ability.

Our modern interpretation of the Shasqua is a sword of uncompromising quality and beguiling beauty. With its brightly polished, decoratively etched blade, with deep fuller and a sturdy spear point, it packs a tremendous amount of cutting power into one undeniably good looking sword.

Coming complete with a high quality wood and leather scabbard, with an ornate chape, carrying ring and throat, it's an excellent, battle ready blade that will be the pride of any collection.

SWORDS OF THE MAN AT ARMS SERIES

The Man at Arms was a warrior, pure and simple, a stalwart and dependable fighter who exhibited great martial prowess with a range of weapons. He was a capable and competent warrior who was the veteran of many conflicts and was often first into the fray. Although he was not a Knight, he fought and trained alongside them as a brother in arms.

To honor these rugged, reliable, salt-of-the-earth warriors we have created a range of true journeyman's weapons that we have called the Man at Arms Collection.

These practical and battle ready swords lack the gleaming blades and polished silver steelwork of our other swords, but they pack a resounding punch where it counts!

Approximating the quality and performance of our high end swords, the Man at Arms collection features a selection of some of our finest high performance blades but at a markedly reduced price.

Their fully sharpened and blued blades have a distinctive gun metal finish that compliments their black leather handles, and when well-oiled they are gleamingly beautiful in their own right.

If you always wanted a Cold Steel® sword, but couldn't afford one, the Man at Arms collection is for you.

NEW MAA CRAB CLAW DAGGER

This beautiful and functional parrying dagger features multiple "crab claw" quillons to block, trap or manipulate an opponent's blade, while its solid steel sail guard offers exceptional hand protection.

Its stiff 17" blade is expertly heat treated and deeply blued to a rich and lustrous finish before hand-sharpening.

The Crab Claw Dagger features an attractive wire wrapped handle that's large enough for American hands, even when wearing modern fencing / HEMA gloves. For ease of carry and display, the dagger comes complete with a sturdy leather sheath with richly blued steel throat and chape.

Perfect for re-enactments, Historical European Martial Arts and as a fine collector's piece – the Crab Claw Dagger is sure to make a big impression!

NEW MAA SHELL HILT DAGGER

The latest addition to our Man at Arms series, our Shell Hilt style "Main Gauche" is a parrying dagger designed to be used in conjunction with a longer blade. Its lengthy solid steel quillons and shell guard protect the user's hand from incoming attacks while offering plenty of leverage for deflecting, parrying and temporarily binding the opponent's blade.

Our Shell Hilt Dagger is beautifully balanced, with a sturdy pommel counter balancing its stiff and sharp 12 1/2" blade. Lustrously blued to a deep black luster, with an aged leather grip, it's as good looking as it is effective!

NEW STEVEN SEAGAL SIGNATURE SERIES

Steven Seagal is a Martial Artist who should need no introduction. He found international acclaim and celebrity for his high-octane Action Movies, but his first and foremost love is the world of Martial Arts.

With an encyclopedic knowledge of the Japanese warrior arts, a 7th Dan Black Belt in the art of Aikido and a lifetime of training, he is still a much-in-demand instructor and consultant. Whether working specialist techniques with UFC stars Lyoto Machida and Anderson Silva or travelling the world teaching seminars, there is no doubt that Steven is still a force to be reckoned with!

Steven Seagal

NEW STEVEN SEAGAL "TEN SHIN" WALKING STICK

While together on a research trip, Steven showed our company President one of the prized pieces in his collection. An oversized custom walking stick of Steven's own design.

This beautiful work of art was made of the finest exotic hardwood but over the years it had aged and weathered. Lynn immediately saw the potential in making a modern synthetic polymer replica of this unique design. One that wouldn't age, crack, warp or splinter. One that was virtually unbreakable!

As a Martial Artist, Steven has spent decades using Bokken. In his highly trained hands, these wooden swords simply become an extension of his body! When it came to designing a walking stick, he incorporated elements of Bokken design into an utterly unique "crook topped" stick.

Lynn said "As soon as I saw that stick, I immediately "got it". Steven had addressed so many of the issues associated with crook top designs, and added so many elements that become immediately apparent to any student of the fighting arts! It's very functional crook cane, but it's also an amazing tool for the modern Martial Artist. Whatever style you study, from walking stick defense, Japanese sword arts, stick fighting, tomahawk fighting, and even bayonet training! This design flows into everything, it's amazingly versatile."

Our Polymer Walking Stick is almost an exact replica of Steven's original design. As Steven is a very tall individual, it is the largest offering in our walking stick series.

Featuring the symbol for "Ten Shin" - literally "Heaven Mind" or "Walking the Sacred Way" - a phrase of great personal significance to Steven, and an honorific title passed down to him from one of his closest Instructors, this is an unusual walking stick imbued with true warrior spirit.

NEW 91PSSZ
STEVEN SEAGAL "TEN SHIN"

NEW STEVEN SEAGAL HELMET BREAKER

The "Helmet Breaker" of old was an incredibly powerful off-hand parrying tool and percussive weapon used by Japanese Warriors.

It was used to block, hook and parry an opponent's sword at longer ranges and to manipulate, wrench, and bludgeon at an opponent's armored head in standing / grappling range.

Rumored to be capable of prying open armor like an oversized battlefield can opener, there's no doubt it is more than capable of denting helmets, crushing skulls or breaking bones with sickening ease.

Its piercing point glides through armored targets with impressive ease, while the thick spine can be used to parry, deflect and turn even the heaviest of swords.

Its stout upturned "hook" can be used as a guard to protect the hand, while also momentarily trapping and binding an opponent's blade.

In the hands of a trained fighter, the Helmet Breaker was a fearsome weapon that struck terror into the hearts of even heavily armored Samurai!

While testing this devastating weapon, Steven nicknamed it the "Mind Bender" because of its incredible bone crushing power!

Painstakingly reproduced from an antique original in Steven Seagal's collection, our Helmet Breaker is made to Steven's personal specifications.

Every inch of this unusual weapon is made to the highest standards, from the polished blade to the hand painted and distressed scabbard (which replicates Steven's battle worn antique original).

A unique collector's piece that's sure to become the talking point of the collection of any Martial Artist or Historical weapons enthusiast.

STEVEN SEAGAL
HELMET BREAKER

NEW 88CWSS
STEVEN SEAGAL
SWORD BREAKER

NEW STEVEN SEAGAL SWORD BREAKER

Our stunning signature edition Steven Seagal Sword Breaker takes its inspiration from an antique weapon from Steven's personal collection - but rather than simply make an exact copy of the original, Steven worked with Cold Steel President Lynn C. Thompson to bring together their combined knowledge to create a modern combative version of the historical classic.

Steven presented us with an interesting challenge. His fighting style, grounded in a lifetime of study in Aikido, is fast and fluid, with deft movement and precision timing, but Steven is also a very tall, very strong individual, capable of wielding bigger, heavier weapons - and hitting like a freight train!!

They developed a Sword Breaker that was big enough to deliver powerful percussive blows, but still perfectly balanced and capable of nimble flowing moves and subtle counters.

Taking the original weapon as inspiration, Lynn and Steven lengthened the handle and counter balanced the Sword Breaker to facilitate a one or two handed grip, then added a sharp thrusting point to make a formidable new weapon!

The paralyzing power of the Sword Breaker has to be felt to be believed. Its dense cross section repels an opponent's sword like water on wax. Not only shrugging off strikes with ease, but often damaging the sword in the process!

Nicknamed the "Sword Slayer" during prototyping, this fascinating weapon is also a thing of beauty. With richly blackened fullers and hand polished highlights, the "blade" is as good looking as it is effective.

KATANA

EMPEROR SERIES

The Emperor Series swords are exquisitely beautiful examples of the swordmaker's art. Battle ready and artfully designed, they're styled to reflect some of the most distinctive hallmarks of Japanese sword design.

To begin with, our factory has used only traditional materials for the Emperor Series Sword's fittings. The Tsuba (guard), Fuchi (collar), and Kashira (pommel), are expertly made and finely crafted in nickel-silver brass.

The Habaki (blade collar) is hand made out of nickel-silver brass and each hilt is covered in Samé (ray skin) and tightly wrapped in the traditional style with black silk cord. A beautiful Menuki (a small, ornamental sculpture that's inserted between the ray skin and the cord wrappings on the handle) enhances the sword's aesthetic appearance and makes for a sword that is as traditional looking as we can possibly make it.

All of the Emperor swords feature fully sharpened 1055 carbon steel blades that are heat treated to a spring temper. The blade surface is then given a careful, hand finished polish, with a distinctive mirror polish applied to the fuller.

BLACK LACQUERED WOOD SHEATH WITH BLUE/VIOLET COVER BAG.

DRAGONFLY SERIES

The classic Japanese battle sword in all its incarnations has been celebrated for centuries, not only for its elegant lines and simple beauty, but also for the technique and skill that went into its construction.

Most swords offered today are interpretive copies of antiquities from feudal Japan. They were made for warrior's of small stature who seldom rose above five and a half feet. As skillfully designed as these swords are, they may not be perfectly suited for the twenty first century warrior, who benefited from contemporary advances in childhood nutrition and healthcare and grew up to be a substantially taller, stronger, and more athletic version of his historical counterpart.

As a way of compensating for this size disparity, Cold Steel has created the Dragonfly Series. These swords feature thicker, wider and heavier blades, which mirror our Emperor Series in respect to heat treatment, polish, quality of furnishings, and attention to detail, but with a few new departures.

Most noticeable are the distinctive teal-green silk cord-wrap and black samé (ray skin) used on the handles and the black iron furniture that bears the dragonfly motif. Also, the polished blades are more strongly curved than our Emperor blades and terminate in a long "iris leaf" point for maximum cutting and slashing potential. Additionally, these swords come with two protective bags. There is a blue cotton travel bag and an intricately decorative display bag that's made from the finest heavy silk brocade.

TAI PAN®
Designed by Lynn C. Thompson, in his distinctive signature style, the Cold Steel Tai Pan® embodies all the finest features of a classic double edged dagger. Our Tai Pan® features a sturdy spear point which is wide and thick enough to resist breaking without compromising its ability to offer deep penetration. Its razor sharp twin edges offer twice the cutting potential, and when used with skill, the Tai Pan® is capable of cutting in a full continuous 180° arc with devastating effect!
The Tai Pan® features a tapered non-slip Kray-Ex™ polymer handle with a flattened oval cross section which encases its generous full tang and terminates in a solid steel tapered pommel.
Meticulously fashioned from expertly heat treated Japanese San Mai III steel, it's simply one of the finest production daggers ever made.

TANTO SERIES
The pioneering design and innovative new materials in our Tanto Series took the industry by storm in the early 1980's, and for many people, a classic Tanto, designed by Lynn C. Thompson is considered the ultimate high end fixed blade!
Highly prized by Martial Artists and Blade Enthusiasts alike, these collectible Tantos are strictly limited edition, and made from Japanese San Mai III steel. They feature a deep lustrous satin finish, hollow ground blade bevels and a contrasting line grain finish on the blade flats which highlight our state of the art grinding methods, and emphasizes the Tantos luxurious appearance.
Each Tanto also comes with our famous flattened oval Kray-Ex™ polymer handle. This oval shape resists rolling or twisting in the hand under hard use, while the Kray-Ex™ gives superior grip retention even in the worst possible conditions, ensuring safe handling even when the owner's hands are wet, cold or bloody.
The Tantos tapered solid steel pommel is designed to concentrate the force of a crushing blow into a small area. Even a moderate strike can be effective, disarming or incapacitating an attacker.

WARRIOR SERIES

JAPANESE STYLED SWORDS

The Japanese swords of the Emperor Series have proven, since their initial introduction several years ago, to be quite popular with many of our customers. Still, we are aware that there are some people who want a battle ready sword but hope to find one at a more affordable price. Our Warrior Series addresses this problem directly. In our efforts to reduce the costliness of the blades, we have omitted the expensive mirror polishing that we used on the Emperor swords to create a series of Japanese swords with a more practical finish.

The Warrior Series swords are very handsome in their own right and share the same steel, heat treatment, and sharpness as their more expensive Emperor counterparts. Like the Emperor swords, they have Samé covered, cord wrapped handles and quality fittings. If you're in the market for a strong, good looking, reasonably priced Japanese sword we know you'll be happy to own one of these.

POLYPROPYLENE TRAINERS

The best of the world's martial artists have known a simple truth for ages... if you want to become reasonably good at wielding a fighting implement, you should endeavor to learn the best fighting techniques, footwork, and the basic stances. However if you want to be a master at it you will have to eventually start training with a "live weapon".

If, for example, your ultimate goal is to wield a razor sharp sword safely and effectively, you need to train with a sword that approximates the size, feel and heft of a live blade, yet minimizes the possibility of causing grievous, permanent, or life-threatening injury to yourself or your training partner.

This concept was implemented by the ancient Romans, who used dull wooden swords to train their Gladiators and soldiers. And Japanese Samurai used a wooden training sword that was called a Bokken. It's an elegant solution to a vexing problem and effective enough to still be used today. The only problem is that a wooden training weapon can rot, crack, chip or splinter and eventually become useless.

Cold Steel's solution to these dilemmas was to design a line of synthetic substitutes, that are low in price and impervious to the elements. The Cold Steel line of Training Weapons are made of the heaviest grade polypropylene available and closely duplicate their real counterparts in length, size and feel. While they're not quite as rigid as wood, they have the winning advantages of being virtually unbreakable, remarkably stiff and cut resistant.

STICK

NEW TRAINING STAFF

Many of our fans and customers share our love for the Martial Arts, and they have been asking us to produce longer training tools for many years; and now, thanks to recent pioneering innovations in the world of high-strength polymer production we are proud to offer our first synthetic training staff!

Our company President Lynn C. Thompson has studied and trained with numerous pole arms, spears and staves (most recently training Krabi Krabong Staff with Guro Ron Balicki) and he found that a hard wearing octagonal "Okinawan style" Japanese Staff was an excellent training tool for all of these disciplines and more. Therefore, the first of our long training tools features a traditional octagonal cross section for superior grip and comfort.

Perfect for pell work and for conditioning training, this high-impact staff will be the perfect addition to any Martial Artists training regime.

ESCRIMA STICK

Since 1980, when he first read Guru Dan Inosanto's book, "The Filipino Martial Arts", our President, Lynn C. Thompson, has diligently studied and trained in these disciplines. Lynn's extensive sparring experiences, combined with his study and training had an immeasurable impact in shaping Cold Steel into the company it is today.

Our Cold Steel Escrima Stick resembles a traditional rattan stick in length, weight, and cross section, it is however, much more durable because it's injection molded from super tough black polypropylene. It measures 32" long and is 1" in diameter and weighs a little over 15 ounces.

Unlike rattan, it resists mildew, and won't dry out, warp, crack, splinter or shrink, and with the use of a saw, it can easily be modified to any length. Plus, like our baseball bats, Bokkens, and African Walking Stick, it is easy to clean and is so resistant to impact stresses and the elements, that it is virtually unbreakable and practically indestructible.

We're confident that stick fighting enthusiasts and the Filipino Martial Arts Community will want to add one or more of these sticks to their training arsenal.

MEDIEVAL BUCKLER

Essentially, a Buckler is a small shield about the size of a large dinner plate. It often accompanied a swordsman as an aid in defense. The Cold Steel training replica is stoutly made and has a thick, sturdy, raised boss to protect the hand, and a rugged handle that will withstand plenty hard of use.

SPECIFICATIONS:

WEIGHT:	34.7 oz.
DIAMETER:	12"
THICKNESS:	1/2"
MATERIAL:	POLYPROPYLENE
NOTE:	ALWAYS WEAR EYE PROTECTION AND APPROPRIATE EQUIPMENT WHEN TRAINING. NOT FOR USE WHEN TRAINING AGAINST METAL WEAPONS.

92BKPB MEDIEVAL BUCKLER

MINI PAL™

For a small knife, the Mini Pal™ delivers heavyweight performance. It has an edge that zips through a host of materials at unbelievable speed. And, since the one inch long blade is razor sharp, it will open delicate packages and envelopes, cut rope or punch through heavy cartons with ease.

Also, the Kray-Ex™ handle totally encapsulates the tang and part of the shaft, for increased comfort and improved control.

URBAN PAL™

The Urban Pal™ should be standard equipment for survival in today's urban jungle. At less than half an ounce, it's perfectly at home in a pocket or purse and can be easily attached to a key ring, or hung around the neck.

SUPER EDGE™

This rugged little workhorse can cut through tough materials that would make a bigger knife "choke". Its diminutive overall length and feather light Secure-Ex® sheath make it a natural for attachment to a key ring, zipper pull, "D" ring or belt loop.

URBAN EDGE™

A well-made push knife is a surprisingly versatile and useful everyday utility tool. Its secure grip allows the user to open their hand while still having full control over the knife. Many of our staff uses them regularly - opening boxes, pausing to sign for deliveries or type on computers or tablets - all without the knife ever leaving their hand!

Light enough to be worn as a neck knife or hung from a key ring or a purse, but still packing enough cutting power to handle tasks that would challenge even some of our competitor's larger knives, the Urban Edge also makes a formidable last resort self defense tool. This awesome knife is complemented by our sturdy Secure-Ex™ sheath and a black bead lanyard chain.

JAPANESE AUS 8A STAINLESS BLADES				

CHAOS™ SERIES: NEW CHAOS KUKRI

Military service men and women on modern-day battlefields are more heavily equipped than ever. Innovations in rigging and materials, coupled with equipment, weapons and tools mean virtually every inch of real estate in a soldier's kit needs to be carefully considered. Our Chaos series fixed blades aim to fill some of that precious space with a truly hard-wearing combat knife.

Taking inspiration from the classic "Trench Knives" from both World Wars of the last century, we have developed a series of new tactical fixed blades that are suitable for the challenges faced by today's modern day warriors.

Our Chaos series fixed blades are equipped with unique "D" ring guards made from reinforced 6061 aluminum, allowing for an incredibly secure and comfortable grip while protecting the hand both from incoming attack and damage while striking or cutting an opponent who's covered in body armor, ammo, flashlights, magazines and gear!

Their extra thick 1055 carbon steel pommels are tapered to concentrate the percussive force of a hammering strike, and their full tang SK-5 High Carbon steel blades are expertly heat treated for maximum performance.

Available in Tanto, Double Edge and Kukri blade configurations (three of our most popular blade shapes with Military units) the Chaos series combine maximum safety and security with extreme performance and combat potential.

Their tough Secure-Ex™ sheaths are Molle-Lok and Tek-Lok® compatible, with rugged adjustable Cor-Ex™ belt loops and retaining straps for a secure and reliable lock up when not in use.

NEW NIGHTFALL™ SERIES JAPANESE STYLED BLADES IN CPM 3-V STEEL

Our classic San Mai III fixed blades have been a Cold Steel staple for decades. Coveted by Martial Artists and knife collectors alike, they are much in demand, but these high-end luxury fixed blades are only produced in exclusive limited edition runs each year.

Therefore, we are proud to introduce our new Nightfall™ Series of Japanese styled blades made from American CPM 3-V high performance powdered steel – with the same design and attention to detail as our much loved San Mai classics but with the addition of this premium American super steel, we're excited to usher in a new era of high performance fixed blades for the discerning knife owner.

Each of these tough, reliable blades is DLC (diamond like) coated to a rich inky black finish. Highly scratch and wear resistant, and honed to an edge that you would expect on the keenest of razor blades, they are not only super sharp, but built to last!

WARCRAFT SERIES: NEW MEDIUM WARCRAFT TANTO

Lynn C. Thompson has championed the awesome power of the Tanto for over 30 years.

A pioneer in modern Tanto design, Lynn developed lightning fast, versatile knives that were met with great critical acclaim, particularly with the Military who appreciated their robust and reliable design coupled with superior fighting functionality.

Over the next three decades Lynn has continued to develop a variety of Tantos, and our Warcraft Tanto series embodies his very latest ideas regarding this inspiring blade shape.

Our Warcraft Tanto blades are noticeably thicker than many of the knives on the market today. With tough reinforced tips, elegantly curved cutting edges and sturdy one-piece construction, they are designed to soak up punishment while delivering unprecedented performance.

Made from the highest quality American CPM 3-V steel, each Warcraft Tanto's blade features a stout flat ground primary cutting edge and a chisel ground secondary blade bevel, both hand honed to hair popping sharpness. The intersection of these two blade bevels (The Yakote) forms a wickedly effective secondary point that allows for a devastating snap cut.

The Warcraft is then D.L.C coated (Diamond like Coating) to make it highly rust and scratch resistant, while also reducing glare and minimizing friction.

The taper-ground thick, full tang, is encased in 3D machined textured and ergonomic USA G-10 scales, making our Warcraft series comfortable and secure in hand, and equally at home as a reliable workhorse or life-saving combat knife.

Available in three sizes, the Warcraft is quite possibly the highest quality premium tactical fixed blade in the world today.

SRK® (SURVIVAL RESCUE KNIFE) NEW VG-1 STAINLESS BLADE

Survival & Rescue operations demand a versatile knife able to withstand the most extreme abuse. Simply put, the Cold Steel SRK (Survival Rescue Knife) was designed specifically with this in mind.

The SRK is a rugged, dependable knife built to perform in even the toughest conditions. A popular knife with Military and Tactical Law Enforcement Personnel, the SRK is the standard issue knife of the Navy SEALs, for their BUDS – or Basic Underwater Demolition training - the SRK has proved its worth time and time again in the most demanding environments. Whatever the mission, we're confident that the SRK from Cold Steel is the knife for you!

RECON TANTO NEW VG-1 STAINLESS BLADE

Over the last 34 years, Cold Steel has succeeded in establishing the Tanto as a superior combat blade. The pioneering research, development and refinement of this blade shape by our company President Lynn C. Thompson has proven the value of the "American Tanto" style reinforced point beyond question.

The Recon Tanto continues to redefine the standard for combat knives around the globe. It is well on its way to becoming the preferred fixed blade for SWAT teams and special military units. Visit your local dealer and ask about the Recon Tanto. Experience the extraordinary quality of both the VG-1 Stainless model (shown here) and the VG-1 San Mai III® model - test their distinctive razor sharp edges for yourself and you will see why the Recon Tanto is a unique knife you can't afford to be without!

LEATHERNECK® SERIES NEW GERMAN D2 BLADES

This series of tough, combat-ready fixed blades is comprised of two distinct and iconic blade styles, both of which have proven to be exceptionally popular with our brothers and sisters in the armed forces:

- The Leatherneck-SF (for Semper-Parati) has a beautiful saber ground clip point blade. Hollow ground and honed by hand to a startling razor sharpness.
- The Leatherneck-Tanto features our classic signature Cold Steel style Tanto blade with a stout reinforced tip for extra strength and durability.

Both are made from German D2 Tool Steel and finished with a non reflective, highly scratch resistant DLC (Diamond Like Coating).

To keep the fingers from sliding forward onto their keen edge, the Leathernecks come with a superior solid steel guard. Made of thick steel with double quillons that are turned slightly forward to provide excellent protection for your hand while offering minimal interference in the use of these knives when performing utility tasks.

The handles are made of deeply checkered Kray-Ex™ that totally encompasses the Leatherneck's extra wide, full tang. They offer unsurpassed gripping power through their palm hugging oval cross section and unique finger trough.

The Leatherneck's handle is capped with a thick, machined steel butt cap (not cheap casting or plastic like others on the market today) so they can also deliver frightful blows with the butt or even double in an emergency as a hammer.

To carry the Leatherneck knives safely and conveniently in all environments, they come with a sturdy and versatile Secure-Ex™ sheath, complete with fully detachable and ambidextrous belt loop.

PEACE MAKER™ SERIES

If you're in the Military or Law Enforcement; if you ride horses or motorcycles; live on a ranch or a farm - or if the encroaching threats of the urban jungle are simply getting too near for comfort - then the Peace Maker series of boot knives are for you!

Clipped to the top of your boot and covered by your pant leg, these versatile fixed blades are rendered virtually invisible, furthermore, your knife is always easily accessible when you need it.

The Peace Makers are astoundingly light, and substantially thinner than many of the alleged "extreme duty" tactical knives available on the market today.

The Peace Makers compound ground blade bevels makes them very easy to re-sharpen, and their stiff, distal tapered points are capable of piercing thick targets without compromising any of their cutting potential.

As these inexpensive boot blades offer such a wide spectrum of uses - utility, hunting, fishing, and self-defense - it's fitting that they also have a very versatile grip. Their deeply textured handles are thin and rectangular with a pronounced palm swell for a secure grip, and a sturdy double guard to protect your precious fingers from slipping onto the sharp blade.

Our ambidextrous Secure-Ex™ sheaths are cut and stab resistant and impervious to the elements - so unlike sheaths made from leather or fabric, they'll never rot, crack, mildew, or lose their shape. Additionally, they're fitted with a custom-made, stainless steel belt clip that will keep the sheath firmly attached to your boot or belt when your knife is drawn.

COUNTER TAC™ NEW VG-1 STAINLESS BLADES

Our Counter TAC boot knives were designed with one simple philosophy in mind. Functionality.

Quite simply - they work, and they excel at what they do!

The Counter TAC's full tang blades are made from beautifully polished and ground VG-1 Stainless steel that's vacuum heat treated, and sub-zero quenched for strength and durability.

Designed to cut as well as thrust, their double edged blades are perfectly hollow ground with a unique cross section that allows for a surprisingly effective cut, while still keeping the double edges and needle tip stiff enough to put in good work without damage.

The ergonomic design of the Kray-Ex handle is comfortable and adaptable to any grip, and the deeply textured surface and double guard will insure that the knife is not likely to slip from your hand under any circumstances.

Finally, each Counter TAC is shipped with a state of the art Secure-Ex™ sheath, complete with a removable boot/belt clip and lashing slots so you can carry or conceal it just about anywhere.

KOBUN®

The Kobun® is a lightweight Tanto styled knife. It takes its namesake from the Japanese Yakuza, or martial underworld, where the word "Kobun" is a kind of indicator of rank that suggests the word "soldier", or one who takes orders from his "Oyabun" or boss. It's a fitting name for a knife like the Kobun®, which was effectively designed to be "a good soldier".

In profile it closely resembles our Master Tanto, but it sports a thinner blade, and that supports its main function; to be a light weight knife.

Like our Tantos, it features the Tanto styled reinforced point. This contrasts sharply with most knives on the market today which are notorious for their paper thin points which are easily broken or bent. In contrast, the Kobun's® point is highly resistant to bending or breaking because it is reinforced by the full thickness of the blade's spine which runs almost to the very tip of the blade.

The Kobun's® deeply checkered Kray-Ex™ handle is designed to offer minimum bulk with maximum grip. Its cross section was made as thin as possible (approximately 1/2 inch), then contoured to resist turning or shifting in the hand.

SAFE MAKER® SERIES NEW VG-1 STAINLESS BLADES

Cold Steel has been making push knives for over a quarter century. Over the years we have continually refined our designs, discarding some features and enhancing others. Constantly striving to produce the best push knife in the world.

Designed by Lynn C. Thompson, our Safe Maker® series represents the pinnacle of our learning, experience, testing, and development.

The blade, shaft, and "T" shaped tang are all drop forged from one solid piece of VG-1 Stainless Steel, and the subsequent vacuum heat treatment and sub-zero quench renders these blades virtually unbreakable.

A textured, non-slip Kray-Ex™ handle totally encapsulates the tang and part of the shaft for added comfort and security.

Our Safe Makers are available in two sizes; and each includes a thin, easily concealable and sturdy Secure-Ex™ boot/belt sheath. The smaller version also includes a steel head chain lanyard so it can be worn as a discreet neck knife.

STEEL TIGER® NEW VG-1 STAINLESS BLADE

Our Steel Tiger® is a thoroughly modern tactical interpretation of an ancient Indonesian Karambit.

A design collaboration between Lynn C. Thompson and the late custom knife maker Steven Likarich, the Steel Tiger® was designed to possess all the best features of this iconic hooked blade and to integrate them seamlessly with modern materials and styling.

The Steel Tiger's broad, deeply curved and needle sharp blade simply has to be seen and felt to be believed. The VG-1 Stainless Steel blade is vacuum heat-treated and sub-zero quenched, taper ground and highly polished for maximum strength, cutting power, edge retention and performance.

The tough and durable Griv-Ex® core handle fully encapsulates the tang, emerging to create the bolster, thumb-shelf and distinctive finger ring. This Griv-Ex® core is then injection over-molded with premium Kray-Ex™ polymer, creating a superb, non-slip grip that won't let you down even in when your hands are cold or wet.

For safety, convenience and lightning quick access, the Steel Tiger® comes with a Military style Secure-Ex™ sheath that you can lash to your gear or retain on your person via the removable boot/belt clip.

STEVEN LIKARICH

SAFE KEEPER® SERIES

Here are perhaps the finest production push knives in almost 150 years. They have the cutting and piercing potential of a larger knife, but are small enough so that they can be easily attached to tactical web gear, tucked in a waistband or boot top, or even strapped to a wrist or ankle.

SAFE KEEPER® II: Designed for the twenty first century, the Safe Keeper® II is the ultimate push knife. Just the look of this knife with its wicked blade jutting out from the fist is enough to deter almost all aggressors. And, if action is necessary, the Safe Keeper's® shock absorbing Kray-Ex™ handle imparts devastating punching blows, yet is so secure in one's hand that it's practically impossible for even a novice to be disarmed.

SAFE KEEPER® III: The Safe Keeper® III offers outstanding versatility, especially as a boot knife. Its light weight and overall length of five inches make it the perfect combination of small size and big performance.

The single edged design of the Safe Keeper® III means you can safely "choke up" on the blade for extra fine work, while the false edge provides superior point strength. With only one sharp edge, the Safe Keeper® III can double as a rescue knife.

JAPANESE AUS 8A STAINLESS BLADE STEEL

SECRET EDGE™

Thin, feather light, and flat like a pancake, our Secret Edge™ is suitable for anyone in the market for an unobtrusive, yet highly effective neck knife. Unlike its heavier, bulkier rivals, the Secret Edge™ is so slim it virtually disappears under clothing and, at 3.2 ounces (with sheath) is a joy to wear without causing neck fatigue.

Inspired by the ancient Scottish Skean Dhu, it's thoroughly modern in materials, performance and appearance, and presents a flat ground Japanese AUS 8A Stainless blade that's wide at the base for cutting power and narrow at the tip to assure effortless penetration. The edge is so murderously sharp it will astound your family and friends.

And, to assure maximum purchase in such a diminutive blade, the Secret Edge™ is equipped with exceptionally thin, flat, G-10 styled Griv-Ex™ handle scales. It has three holes, to reduce weight, and an aggressively textured surface, so it hugs the palm and resists rolling or twisting in the hand.

For safety, and to prevent loss, the Secret Edge™ comes with a correspondingly slim Secure-Ex™ sheath. It offers reliable retention without compromising speed of access or deployment.

HIDE OUT™

Our Hide Out was designed with one clear goal in mind; to produce a small, inexpensive and astoundingly functional neck knife - one that was just so good, so affordable, and so light that there was simply no excuse not to carry one!

Its high satin polished, double-edged Japanese AUS 8A blade is "Scandi" ground, which makes it very sharp and also very stiff, allowing for a strong point and effortless penetrative power.

Its full tang is encapsulated in a weather proof Kray-Ex™ handle that has been designed to be very thin and flat (so that it won't imprint on even the thinnest suit, dress slacks or uniform pants).

The handle swells at the butt to give the hand great purchase and security while enabling effortless transition between grips. And a generous lanyard hole is easily big enough to attach Paracord further aiding the knife's versatility.

A strong, reliable Secure-Ex® sheath with bead chain lanyard completes this lightweight package. Despite its cutting and piercing power, the knife itself is a featherweight, weighing a meager 1.9 oz!

An awesome, affordable, lightweight double edged fixed blade that can easily be carried around the neck, tucked into a boot, attached to a belt or even carried in a pocket instead of a folder, the Hide Out sets a new standard for versatility. There is simply no excuse not to own one!

SPIKE SERIES

Our Spike series continues to raise the bar for neck knives! Thin, light and super-tough, their razor sharp, zero ground blades, are complemented by heavily scalloped, textured handle scales that offer a comfortable, secure grip.

Our ergonomic handles feature Integral quillons that provide a safe stop for index finger and thumb, while the deeply textured and sculpted G-10 styled Griv-Ex™ provides excellent positive traction even when your hands are cold, wet and slippery.

Available in four distinctive blade shapes (Bowie, Drop Point, Tokyo and Tanto point) they offer all the strength of a solid steel one-piece construction (much stronger than any tactical folder and even rivaling the strength of some boot knives) while still being light enough to carry all day without fatigue.

Complete with Secure-Ex™ sheaths that provide excellent retention and safety. Super lightweight (weighing in at 3 oz. in the sheath!) the Spikes can be comfortably worn around the neck 24/7 by using the black bead lanyard provided, or carried on a waistband or belt by taking advantage of their new Tek-Lok™ compatible design.

Easily concealed, razor sharp and light as a feather - we proudly present the Spike series by Cold Steel!

DOUBLE AGENT® SERIES

Cold Steel's Double Agent® neck knives possess a significant set of advantages worth noting. Designed by Zach Whitson, with either a Karambit or Clip Point blade style, they're thin, flat, and super light (a little over 3 ounces including sheath). This makes them easy to conceal and very comfortable to wear. Their most audacious and notable feature, however, is their double ring handle design. Slip an index finger through the front ring nearest the blade and your pinky finger through the rear ring and close your fist to obtain a forward grip and vice versa for a reverse grip.

It doesn't matter how hard you cut, chop, hack, hammer or thrust with the Double Agent®. Its twin rings will always prevent your hand from sliding forward on the razor sharp edge and will likewise resist the effects of centrifugal force or the efforts of an adversary to wrest the Double Agent® from your grasp.

MINI TAC® SERIES

Cold Steel's Mini Tac® Neck Knives are astonishingly lightweight, so much so, they can be comfortably worn practically 24 hours a day.

With their sturdy head chain lanyards and their rugged Secure Ex® sheaths (specially designed to snugly retain the knife while allowing a speedy draw stroke), they can be worn outside clothing and perform as a handy utility or rescue knife. They can also be carried more discreetly under a shirt or blouse, or inside a coat. They can even be used for camping or hiking as they can easily be tied or taped anywhere from a backpack to a fanny pack. Their versatility is virtually endless.

Fashioned from Japanese AUS 8A stainless steel and reflecting state of the art heat treatment they are honed to a razor edge and exhibit incredible toughness for such a small knife, due in part to their full tang construction.

Tough, rough, and ready for anything, they come equipped with thin high quality black G-10 Griv-Ex™ style handle scales. This feature allows them to lie flat and close against the body and provide an aggressive gripping surface. Also when these scales are combined with integral sub hilt they give the fingers of the hand incredible purchase and allow a remarkably secure grip that resists rolling or twisting.

TANTO:

For a knife this size, our Mini Tac® Tanto offers a remarkably wide, stiff blade and a very sturdy reinforced point, making it ideal for piercing even tough, hard objects. As an added bonus, its wide blade allows for a very generously sized hollow ground blade bevel and an extra keen edge so it can cut almost as well as it pierces.

SKINNER:

Provides a long, curved cutting edge with a sharp point. It's ideal for cutting slashing and skinning strokes. It's been extensively field-tested in Australia where it single-handedly caped a huge buffalo slicing through neck skin over 1" thick!

RUBBER TRAINERS

Now you can practice with some of our most popular knife designs, in relative safety, with our rubber training knives. Each has been carefully fashioned to look as realistic as possible so they can be effectively used in solo practice, training drills, disarm drills, and demonstrations and any other activity where you want a reasonably close approximation of realism but not the extreme danger and risk associated with an actual knife. The Santoprene rubber blades are soft enough to prevent the likelihood of most bodily injury. They do however, have a level of firmness that might cause injury to the face or the eyes, so it is recommended that appropriate eye protection or a fencing mask is utilized at all times when using a Cold Steel® rubber training knife.

NEW TRAINING FIREARMS

Perfect for use by Military & Law Enforcement personnel, Personal Protection and Security Professionals and civilian Martial Artists, our Training Firearms are made from ultra-durable thermoplastic rubber.

They are stiff enough to train drawing techniques from the holster and disarming techniques in close quarter training, but just soft enough to use in hand-to-hand striking situations with relative safety.

Strong enough to survive hours of training, but inexpensive enough to outfit even an entire gym of students without breaking the bank, these practical and tactical training aids are based on some of the most popular firearms in America today - but their bright coloration makes it unlikely that they would be ever mistaken for a real handgun!

NEW DROP FORGED HUNTER

While on a research trip in Argentina, Cold Steel President Lynn C. Thompson had the pleasure of using a solid steel hunting knife by French knife-maker Michel Achez.

He was incredibly impressed by Monsieur Achez's knife, which was both simple in design and astonishingly functional.

Inspired by Michel's work (and with his blessing) Lynn began exploring how to bring this classic hunter to a larger audience.

Our Drop Forged Hunter is expertly heat treated and drop forged from 52100 High Carbon steel with a Rockwell Hardness of 58-59 for superior toughness. Its continuously curved, super-wide blade is both sharp and strong, designed to put in great work in even the most demanding conditions.

With no handle to break or no superfluous parts to rot, crack or get damaged in the field, the Drop Forged Hunter is a no-nonsense hard working outdoor / hunting knife and survival tool.

Its ergonomic handle, with its integral finger guard, deep comfortable trough, and lanyard hole offers a very secure and comfortable grip even when wearing thick, heavy workman's gloves.

Supplied with a thick, traditional leather sheath, the Drop Forged Hunter is sure to be appreciated and valued by real hunters who will marvel at its performance and value for money.

MASTER HUNTER® SERIES

MASTER HUNTER®: NEW CPM 3-V VERSION

Without a doubt, the Master Hunter® is one of the finest hunting knives you can obtain at any price. Available with a Japanese VG-1 San Mai III® blade (or with our new American CPM 3-V High Carbon Steel blade, that's finished with a highly scratch resistant Diamond Like Coating), it features a broad blade that's been flat ground to achieve the ideal blade cross-section and edge geometry.

Carefully honed to razor sharpness, its edge cuts effortlessly while its dropped point simplifies the chore of field dressing and skinning.

The spine of the blade is a full 3/16" thick to allow for the necessary strength and stiffness to field dress and skin the biggest animals like elk, moose, brown bear, and the African Dangerous Seven.

The grip is specially designed to promote long use without fatigue. Made of the shock absorbent, highly tactile Kray-Ex™, and featuring our deeply checkered surface, it positively won't slip no matter how wet or bloody your hands get. Plus, Kray-Ex™ has specially enduring advantages in that it will never rot, shrink, crack, splinter, or mildew, and is completely impervious to even the harshest weather – while still being comfortable to use for extended periods of time.

For safety, the Master Hunter comes in a thick, heavy Conceal-Ex® sheath that will accommodate just about any size belt and allow you to carry it all day without fatigue.

MASTER HUNTER® PLUS:

Sharing most of the design features of our Master Hunter®, The Master Hunter® Plus features a useful gut hook. Perfect for field dressing and opening body cavities without piercing the entrails.

PENDLETON SERIES

Our company president, Lynn C. Thompson, bought the first knife that custom maker, Lloyd Pendleton ever made in 1973. The two went on to be fast friends, and together they collaborated on some of the finest hunting knives in the industry, the Pendleton Series.

PENDLETON HUNTER

The Pendleton Hunter is one of the most popular hunting knives in our line-up. Much loved by the hunting community, it has remained a staple in our collection for many years.

Lloyd Pendleton's innovative drop point blade makes skinning and field dressing even large game a breeze.

The Pendleton Hunter's thick spine, combined with its deep wide hollow grind result in a very versatile point combined with a razor sharp edge.

The subtle contoured handle supports a modest guard and thumb stop while still facilitating a wide range of grips for the intricacies of processing game. The deeply checkered Kray-Ex™ handle also helps the hunter to retain a secure grip on the knife even when his or her hands are cold, wet and bloody.

IMPROVED PENDLETON MINI HUNTER

Our Mini Hunter was designed with one goal in mind, to pare down a functional hunting knife to the smallest size that practicality would allow.

Capable of skinning, dressing and processing even large game, this diminutive hunting knife is an indispensable tool that will make a perfect addition to any hunting or camping pack or survival kit.

Newly improved for 2015 with an upgraded handle for a secure 4 finger grip, the Pendleton Mini Hunter also comes complete with a tough, weather resistant Secure-Ex® sheath, locking it safely in place, while remaining light enough to carry 24 hours a day.

NEW FOR THIS YEAR

Our Pendleton Hunter and Mini Hunter are now also available in premium American CPM 3-V High Carbon Steel, with a hard wearing DLC (diamond like) coating for superior durability in the field.

PENDLETON CUSTOM CLASSIC

Made as a super limited edition, and highly collectible, the Pendleton Custom Classic duplicates the fit, finish and aesthetics of Lloyd Pendleton's celebrated custom drop point hunter.

Its hand crafted and beautifully polished blade is hollow ground from Japanese VG-1 San Mai III® and boasts state of the art vacuum heat treatment, a sub-zero quench, and multiple tempering.

Lloyd's guard and integral bolster are precision machined from stainless steel and skillfully polished.

The Custom Classic features a single short quillon and a unique "thumb print" on the bolster to allow any number of grip options. The handle is also a faithful copy of Lloyd's original. Featuring a red fiber liner that accents the knife's full tang, and twin contoured handle scales made of highly polished black linen Micarta and six steel retaining pins.

A heavy, pouch-style cowhide sheath is included to complement the traditional appearance of this hunting classic.

OUTDOORSMAN®

One of the best multi-purpose hunting knives ever made, this limited edition classic has been a much loved part of our line-up for many years.

Razor sharp, with a wide belly and an up-swept point for skinning, and a secondary bone-breaking edge on the spine for harder harvesting tasks, the Outdoorsman will make short work of even the biggest game.

The Outdoorsman's generous full tang is encapsulated in weatherproof non-slip Kray-Ex®, allowing the knife to be safely used even when your hands are wet and bloody.

A fine gift for any hunter, and an heirloom quality collector piece that can be passed down through the generations.

SRK®

Our SRK (Survival Rescue Knife) was built with one aim in mind, to produce the toughest and multi-purpose survival tool in the industry. A knife you can truly trust with your life!

This practical and tactical fixed blade was immediately embraced by the Military and Special Forces community – and issued by the Navy SEALs for B.U.D.S training – who appreciated the SRK's versatility and durability in even the worst conditions.

This limited edition version of our tried and trusted survival rescue knife is made from Japanese VG-1 San Mai III® steel, which we have found to be an almost perfect balance between edge holding and toughness.

RECON TANTO

Our Recon Tanto was designed for today's modern warriors. A much loved and appreciated knife by the Military and Law Enforcement Special Units, it was developed to withstand the harshest abuse and the toughest possible conditions. Our signature Cold Steel® Tanto point is specially reinforced to stay sharp even when encountering modern body armor – tested right here in our HQ by punching through 55 gallon steel drums!

Our limited VG-1 San Mai III® steel edition versions of these tactical fixed blades are hand made in Japan to the highest possible standards, and are sure to last a lifetime and beyond!

TRAIL MASTER®

Our Trail Master® is the result of years of development, field testing and modification. Designed by Lynn C. Thompson, it was devised with the aim of becoming the best all-purpose Bowie Knife in the world.

From its broad clip point and hand honed, razor sharp blade to its extra sturdy non-slip handle, the Trail Master® is built to perform.

Popular with hunters, outdoorsmen and survival experts as well as with military personnel who appreciate a larger fixed blade that can serve multiple roles in hard conditions, the Trail Master® is a rugged workhorse Bowie that will be your trusted companion whatever your mission!

This model features VG-1 San Mai III® steel and is hand-made in strictly limited edition in Japan.

AMERICAN BANDO ASSOCIATION

GURKHA KUKRI

Cold Steel's Gurkha Kukri was initially inspired by Cold Steel President, Lynn C. Thompson's close association with Dr. Maung Gyi, chief instructor of the American Bando Association, and it still bears their insignia to this day.

Gaining notoriety as the infamous fighting knife of the Gurkhas, the Kukri remains a popular blade with Military and Special Units all over the world.

As a survival tool, a bush-craft blade and as a tactical knife it's hard to beat. Easily doing the work of a hatchet or axe, and in our tests – it even out-cut most swords!

The Kukri's specially designed Kray-Ex™ handle is perfectly contoured and deeply checkered, offering a superb non-slip grip even when your hand is cold or wet, while cushioning your hand from the shock of even the hardest chopping stroke.

Each Gurkha Kukri is supplied with our military style Secure-Ex® sheath to protect the blade and allow you to wear it safely and securely in a variety of configurations to suit any situation.

BLACK BEAR CLASSIC

This iconic sub-hilt fighting knife was first developed by Bob Loveless, a celebrated knife maker and one of the founding members of the prestigious Knife Maker's guild.

Our interpretation of this classic knife, the Black Bear Classic, features a Japanese VG-1 San Mai III® blade that is perfectly heat treated with a beautiful double grind. The blade is polished to a rich and flawless satin finish, and the edges are hand honed to hair shaving sharpness!

The Black Bear Classic's inky black Micarta scales are fastened to the blade tang by 6 stainless pins and expertly hand shaped and contoured. Then the handle - including the 300 series stainless guard and sub hilt - is buffed by hand to a gleaming shine!

A true masterpiece and a highly collectible limited edition blade that will be the jewel of your collection.

LAREDO BOWIE

The Laredo Bowie is one of our most instantly recognizable and iconic knives. This limited edition Bowie is built along traditional lines, but with some of the finest materials available. The Laredo's elegant flat ground San Mai III® blade is hand honed to a hair splitting edge that has to be felt to be believed, and its rich polished micarta handle and brass furniture all gleam with a lustrous sheen.

Every inch of this high performance blade is designed for function first. Finely balanced, sharp, and durable, this Bowie is capable of putting in great work – and looking good while doing it!

Produced in super limited numbers by our master blade smiths in Japan, this knife is highly collectible and much prized by blade enthusiasts who admire not only its beauty as a piece of art, but also its functionality as a classic fighting knife and tool. Rivaling even the best custom knives, the Laredo Bowie is hard to beat!

SUB HILT FIXED BLADE SERIES

These sub hilt knives offer all the advantages and performance of a custom knife with the additional advantage of being low in cost. The blades are made of Japanese AUS 8A stainless steel, and are given a state of the art heat treatment that includes double tempering, assuring that they're unsurpassed in strength and toughness.

The grip on these blades is a model of efficiency and economy. The handle, guard and sub hilt are injection molded in one integral piece out of Kray-Ex™. This reduces cost, yet delivers the durability, security, and control a sub hilt is famous for. And, as an added bonus, renders the handles impervious to moisture or inclement weather.

MARAUDER

OSS & OSI

The OSS, double edge model, is primarily best suited to a thrusting attack, however, because its twin edges are honed razor sharp, it's capable of delivering a lightning quick slash in virtually any direction.

The OSI is the single edged version of our OSS. Hollow ground to a thin, ultra keen edge it's an awesome "sticker" and will cut and slash with the best of them. Extensively field tested by our President, Lynn C. Thompson, it has field dressed, skinned, and "broken up" dozens and dozens of animals from wild boar to buffalo and proved to be outstandingly efficient field knife. It's also ideal for use in countries or localities that prohibit or restrict double edged knives.

BOAR COLLECTOR™

Nothing's more primal than hunting wild game with nothing more than a knife. It's the element of hazard that makes it a worthwhile experience. One catch dog falters, or loses his grip and you're at the mercy of some sharp, angry tusks.

The Boar Collector™ comes with an extra wide Celtic style blade, a long sloping point and a superbly hollow ground edge. It supplies the decisive piercing power you'll need to drop the biggest, meanest game. Complete with an ambidextrous Secure-Ex® sheath that will accommodate just about any belt, the Boar Collector™ is a lightweight, life saver you'll want at your side on your next hunt.

MARAUDER™

Inspired by the formidable combat knives of World War II and honoring the name of Merrill's Marauders – also known as Code name 'Galahad', the United States renowned long range, deep penetration assault unit within the South East Asian theater of conflict – our Marauder Bowie is rugged, relentless and reliable. A true battle ready Bowie.

Its huge, extra broad, razor sharp Japanese AUS 8A blade, with its continuously curved cutting edge, deep wide blade bevels and formidable clip will cut, hack, shear, chop, slice and pierce with equal ease. During our intensive and torturous performance testing of this new Bowie our company President simply uttered one word: "Beastly".

Its sturdy and versatile Secure-Ex™ sheath allows the knife to be fastened comfortably and securely on a belt or pack, or LBV.

COMBAT CLASSICS

IN MAR TEMPERED O-1 HIGH CARBON STEEL

These very popular, time tested knives have been in our line for many years and are ideal for just about any mission.

Made out of O-1 High Carbon Steel, they are precision ground, heat treated and Mar Tempered in our state of the art factory in Taiwan to rival the strength, toughness, and edge retention of our famous Japanese swords. Check out their absolutely superior fit, finish and above all sharpness and then put them to work and we are sure you'll agree they are an incredible bargain.

BUSHMAN®

For the money, the Bushman® knives might be the strongest survival/outdoor knives in the world! Unlike most hollow handled survival knives, there is no joint or seam between the blades and handles that requires a mechanical fastener. Instead, the Bushman's® blades and integral handles are each expertly cold forged out of a single piece of 2.5mm thick SK-5 high carbon steel. The resulting knives are expertly heat-treated and tempered to RC54 and, when subjected to our tests, have withstood over two tons of pressure on their blade/handle transition!

Every Bushman® blade has been carefully ground to an extra thin edge, and then honed and buffed by hand until razor sharp. The Bushman® knives are versatile too! Their hollow handles will accept survival supplies or a variety of handle extensions which can maximize reach, leverage or ease of throwing. They are available in two blade styles (Standard and Bowie point). Both feature continuously curved blades that are ideal for skinning, and will pierce, cut, slash, slice and shear like you won't believe.

Both come complete with a Secure-Ex™ sheath which features a Ferrocium Fire Steel; strike it on the spine of the blade and start a roaring campfire in no time!

FIRE STEEL

POCKET BUSHMAN®

NEW U.S. MADE
CARPENTER CTS® BD1
ALLOY BLADE STEEL

While it's physically impossible for any folding knife to ever match the strength and rigidity of a fixed blade, we believe our Pocket Bushman, with its patent pending lock, is close to hitting the mark. The blade is long and wide with a short, sharp, clip point for usefulness and versatility. And it's hollow ground from top to bottom with just enough belly to be useful for all sorts of tasks.

For the handle, we used the mono block construction method famously used in the French Douk Douk. Its simplicity means there are no liners, handle scales or back spacers, making it quite affordable. A single sheet of stainless steel is folded in half to form a housing for the closed blade, as well as supplying the enormous strength and rigidity required to complement our Ram Safe™ lock.

RAM SAFE™ LOCK

Andrew Demko designed the Ram Safe™ lock to work in tandem with the mono block handle. It is simply a steel bar that moves forward and back under spring tension. A strong compression spring drives the ram forward at all times. This forward action is what keeps the blade closed when folded and locked opened when in use.

When opened, the ram wedges itself between the blade tang shelf and the folded steel frame. This lock up is unique in that the ram, although locking the blade, is not really able to break or shear because it is compressed between the folded frame and the blade tang shelf. In the case of ram or blade shelf deformation under extreme abuse, the angled ram is self adjusting always being pushed forward past all deformations, creating a new solid lock up.

SURVIVAL EDGE

“AN ECONOMICAL HOLLOW HANDLE SURVIVAL KNIFE”

Cold Steel has been determined to bring an economical hollow handle survival knife to market for years. Most knives of this kind (that are currently available) have proven, in our own tests, to be too weak and fragile to be of any real use—and expensive too! In short, we thought we could do better.

Many years of experience with super-tough plastics and injection molding have given Cold Steel an edge over our competition's clumsy offerings. Our Survival Edge is butterfly light and strong as an ox and features a German 4116 Stainless Steel blade that is a full 1" wide and 5" long and terminates in a strong clip point that's versatile enough to meet the demands of ANY survival situation.

The handle is made from the highest-grade Polypropylene available, and has an integral double quillon guard that serves to protect the fingers as well as making it possible to lash the handle to a stick to make an improvised spear. The surface is carefully textured and encircled by 5 rubber “O” rings to improve traction when your hands are wet or slippery and to resist rolling or turning during intense use. Plus, a twist of the waterproof cap at the hollow handle's end reveals a large expanse that will accept a variety of survival aids or tinder.

The Secure-Ex sheath is designed to fit on most belts or be slung on a lanyard around one's neck. It's light, tough, and weatherproof. Additionally, it includes a Ferrocium fire steel. A swift strike using the blade's spine will produce a shower of white-hot sparks and start a campfire roaring in no time at all.

KUDU®

More than 3 million ring lock folding knives are sold in the African Continent every year. These highly functional knives are owned and carried by people from every walk of life and are the go-to every day tool for almost every conceivable task. These versatile knives have stood the test of time, they have been in-use continuously for centuries and with good reason — they work!

Cold Steel's President Lynn C. Thompson has long admired these knives and has seen them put to great use during his many visits to Africa since the 1980's. Now, we are proud to offer our interpretation of this enduring ring lock folder that we have called the Kudu, and we are going to go "out on a limb" and state — this is the best folding knife in its price range in the world!

The Kudu features a highly rust resistant and beautifully mirror polished stainless steel blade that is expertly heat treated to offer an excellent balance between edge holding and ease of re-sharpening. Its glass reinforced Zy-Ex™ handle is not only attractive (with a wood grain texture and polished silver embellishments) but incredibly strong and durable.

Amazingly lightweight, versatile and functional, and affordable on almost any budget — the Kudu represents a new standard in a low cost, high performance folder. There is simply no excuse not to buy one today!

OUTDOORSMAN LITE & TANTO LITE

As a nod to the great success of our Pendleton Lite Hunter, we have decided to make more economical versions of our popular Tanto and Outdoor Man knives. They resemble their more expensive versions in that they feature similar blades, guards, handles, and pommels. The only significant change was the use of slightly thinner German 4116 Stainless Steel blades, and the implementation of less costly materials in the handles.

The handles are made in two parts. They feature a Polypropylene guard, pommel, and core section, which totally envelopes the knives' full tangs. The core is then over-molded in a deeply checkered Kray-Ex™ for a non-slip grip that's impervious to the elements and is easily cleaned with soap and water.

To carry your knives safely and conveniently in the field, we are including a pouch-style Cor-Ex™ sheath complete with belt loop so it can be easily worn on the belt or tucked into your pack or tackle box.

BIRD & TROUT

The Bird & Trout knife is an enduring classic within the Cold Steel line up. A much loved, lightweight knife and tool that is enjoyed by hunters, fisherman and outdoorsmen the world over. Its lightweight one piece construction and its versatile, ultra-skeletonized sheath make it effortless to carry and a joy to wear all day long.

The Bird & Trout's integrated finger ring allows the knife to hang from the finger when not in use, keeping it instantly accessible even when working with cold, wet or bloody hands.

Its slim profile combined with its wickedly sharp edge make it a very handy and infinitely useful every day utility knife.

Use the bead chain lanyard provided to carry the knife discreetly around your neck, fasten it to your key ring or wallet chain, or utilize a Tek Lok or a Molle compatible adapter (like the offerings by our friends at Blade Tech) to carry the knife on your belt, your L.B.V or even strapped to a bag or pack.

ROACH BELLY™

The historical Roach Belly knife was a short blade with a pronounced upswept curve and a sharp point. It was most likely named after the common Roach Fish, which had a similarly round curving belly. It was known in 17th century Britain and the American Colonies.

Cold Steel's interpretation of this knife is a nod to the Black Powder Community, which has continued to appreciate the Roach Belly's economy, versatility and effectiveness. It retains the profile of the original but incorporates modern materials for its construction. The hollow ground blade is made of German 4116 Stainless, expertly heat treated to Rc 56-57, and given a fine sharp edge that's easy to maintain. Instead of the traditional wood handle, ours is made of tough Polypropylene, so it's impervious to the elements and won't swell, shrink, rot or crack the way wood does.

The Roach Belly comes with a pouch style black Cor-Ex™ sheath. The sheath has a generously sized belt loop and also converts readily to being worn as a neck knife.

CANADIAN BELT KNIFE

The Cold Steel Canadian Belt Knife takes inspiration from an old 1950's classic. It has all the features that made the original an award-winning, international favorite plus some modern improvements. Our more contemporary version is made out of German 4116 Stainless steel and hollow ground to a razor edge. It will glide through just about any material because its elliptical profile is very efficient at reducing cutting drag.

The Polypropylene handle is equally efficient, fitting snugly in virtually any hand. It's slightly offset in relation to the blade to keep one's fingers safely out of the way. Light and tough enough to endure hard knocks, it will never break or fall apart in the way a traditional wood handle is prone to do.

This 2 ounce blade comes with a pouch style black Cor-Ex™ sheath. It's light, slim and compact enough to carry on your belt or wear it slung from a cord around your neck day in and day out.

FINN BEAR

Reflecting the best of its Finnish heritage, the Finn Bear is ideal for use in the great outdoors, and makes an efficient utility knife as well!

The German 4116 Stainless blade is hollow ground and given an Rc hardness of 56-57, so it will hold a good edge and is easy to re-sharpen. Its blade shape is practical because of its good sturdy point for piercing and long belly for skinning, cutting and carving. It's big and strong enough to skin a moose, yet thin and delicate enough to slice a tomato or cut up an apple.

The Polypropylene handle is straight with a slightly ribbed texture for traction. Its modified diamond cross section will fit your hand like a glove and accommodate a wide variety of gripping methods.

For safety and convenience, the Finn Bear comes with a deep pouch style Cor-Ex™ sheath and generously sized belt loop so it can be worn on the waist, slung around the neck or tossed into a duffle bag or tackle box.

PENDLETON LITE HUNTER

Over the years our Pendleton Hunters have become enormously popular, and while we think they are reasonably priced, many have asked us for a more affordable Pendleton that will accommodate just about anyone's budget.

So we got together with Lloyd and designed a new knife we call the Pendleton Lite Hunter. In appearance it strongly resembles the rest of the family with a drop point blade, modest guard, hollowed bolster area and a flared butt to aid retention. The only major changes were the adoption of more affordable German 4116 Stainless steel and the use of polypropylene instead of Kray-Ex™ for the handle.

In our testing it got straight A's in the field as it is equally adept at field dressing and skinning, held a decent edge, was easy to sharpen, and proved to be tough as nails.

If you're looking for a very affordable hunting/utility knife that comes with a good, pouch-style sheath and delivers more than your money's worth in performance and value look no further than the Pendleton Lite.

NEW FINN WOLF

Cold Steel President Lynn C. Thompson has always admired the sleek lines and dependable, highly functional blade shape of the classic Pukko. Ever since our inception in 1980, this classic Finnish hunting, and utility knife has never been far from his thoughts.

Over the years, we have released numerous versions of the Pukko, and now, in a design collaboration with custom knife-maker Andrew Demko, Lynn is proud to introduce a new folding Pukko – the Finn Wolf!

Taking the classic Pukko as inspiration, Andrew Demko brought his engineering genius to a new, hard-working folding knife. Thin, super lightweight, easy to carry and even easier to use, this modern EDC (Every Day Carry) knife is perhaps the perfect “everyman” knife.

Equipped with our Tri-Ad® lock, adding new levels of safety and security, the Finn Wolf is utterly impervious to shock – making it reliable in the toughest, most uncompromising conditions.

Its satin polished Japanese AUS 8A blade is ready to put in long hours and hard work, and, with its keen zero ground edge it's a breeze to re sharpen.

With this much performance packed into this comfortable, strong, practical and inexpensive a package, there's simply no excuse not to add one to your collection today!

G.I. TANTO

As its name suggests, our G.I. Tanto is a no-nonsense tactical knife that comes with a legion of practical uses. It may be lean and spare, but it delivers the goods where they count the most! The broad Tanto point blade, integral quillon guard, and Polypropylene handle scales, exemplify a tactical knife stripped down to its bare essentials. It's ground razor sharp out of 1055 carbon steel with a hard spring temper and protected by a black, rust resistant finish so it's ready to take all the abuse you and Mother Nature can dish out.

Heavy, sharp and wonderfully balanced, it's easy to throw by either the blade or handle and it hits with real vigor. In a survival or self-defense situation, it can be quickly and easily converted into a spear or war club. Just remove the handle scales and lash the blade securely to a suitable wooden shaft!

Best of all, it's a great value. Please don't throw away hundreds and hundreds of dollars on similar knives sold by convicted felons and rip off artists posing as elite “military operators”. Get the real G.I. Tanto from Cold Steel and get more than your money's worth.

SHANGHAI SHADOW®

The signature ring on our Shanghai Shadow® gives this blade an assortment of advantages. This simple device allows tremendous versatility in handling the knife. It provides a totally secure grip when the index finger is locked in place through the hole. It can be pivoted around the index finger for a quick change from a forward to a reverse grip. And it can be a means of extending your arm's reach by up to 4" when gripped by the ring alone.

But as cool and useful as the ring is it's the broad leaf shaped blade and Polypropylene handle scales that ultimately make impressions. Made from one solid piece of 1055 Carbon steel, with a tough spring temper, the twin hollow ground edges of the Shanghai Shadow® make it a superb cutting and thrusting weapon. It comes fully sharpened and includes a heavy-duty, Secure-Ex® sheath.

NEW SHANGHAI WARRIOR

Cold Steel President Lynn C. Thompson has been fascinated with Chinese Double Edged Daggers for many years. Our Shanghai Shadow remains one of his favorite double edged knives and he trains with it often, both as a stand-alone weapon and as a companion to a hatchet or sword breaker.

Sparring has always been a big part of Lynn's design process and he often says that many of his “what if” moments happen in the gym. It was in one such training session that Lynn had a thought - What if the Shanghai Shadow was as big as a Bowie Knife?

This question led to numerous prototypes that eventually became what we began to refer to as the Shanghai Warrior.

At 16" long, the Shanghai Warrior is as big as many Bowie Knives, but with the advantage of a super wide, double edged cutting blade.

Its solid full tang blade is continuously curved top and bottom for maximum cutting and slashing potential with either edge, with a reinforced central spine to add stiffness and rigidity to the point.

Its sturdy steel ring allows deft manipulation between grips, making it incredibly fast and lively in the hand, and its removable high impact polypropylene scales make it remarkably comfortable to hold and use.

The Shanghai Warrior's massive blade is safely contained within a versatile and adaptable Secure Ex sheath for ease of carry in virtually any pack or gear configuration.

SURE STRIKE™ STARS

Everyone likes throwing knives! The simple sport of throwing a knife is fun. And no sound is more satisfying than a thrown knife as it "thunks" and sticks a wooden target. Whether you're skilled at knife throwing or are just starting out, you know there's also no fun in missing the target.

One solution is the Shuriken or throwing star. Used for centuries in China and Japan, it consists of a well-balanced piece of flattened steel with 3 or more sharp points. If you throw it overhand like a baseball, side arm, underarm or back hand like a flying saucer, it hits on at least one point every time.

Our Sure Strikes aren't like the cheap, shoddy throwing stars you see at flea markets, guns shows, and in martial arts magazines.

That's because they are precision laser cut from high carbon steel that's been heat treated to a hard and durable spring temper before sharpening and then given a black, baked-on epoxy finish to protect them from the rigors of the elements and repeated throwing.

All three of our Sure Strikes share the same sized diameter, but are varied in weight class due to the differences in steel thickness among the three models. Maximize your fun and get all three models! These are the stars that stick every time, the Sure Strikes from Cold Steel!

SPECIFICATIONS:

	LIGHT	MEDIUM	HEAVY
OVERALL:	5 3/4"	5 3/4"	5 3/4"
THICK:	2MM	4MM	6MM
WEIGHT:	2.8 oz.	4.2 oz.	6.4 oz.

BATTLE STAR

The Cold Steel Battle Star is quite possibly the largest production throwing star ever offered!

The product of years of refinement, numerous design iterations and countless hours of throwing, it is no mere novelty like our competitors flimsy offerings, but a truly unique throwing implement.

Our company President, Lynn C. Thompson worked with award winning Martial Artist James Houston, exploring the close quarter potential of the Shuriken as a hand to hand combat tool, developing a monster sized star that can not only be thrown but be used as a

very effective hand to hand weapon.

Its huge spikes are almost 4 inches long and 2 inches wide at the base, tapering to fine but sturdy points that penetrate even tough materials with relative ease.

The Battle Star is very intuitive to use, quick to learn and a pleasure to master.

Big and strong enough to be thrown with force, it hits as hard as a heavy duty throwing knife, but it is balanced and accurate enough to hit with precision as well as strength.

Whether being used for sport throwing, competition, recreation, hunting or even self-defense the Battle Star delivers!

SPECIFICATIONS:

OVERALL: 10 5/8" THICK: 2.8 MM WEIGHT: 9.9 oz.

SPORT SERIES THROWERS

For many years now we have offered the ultimate in professional grade throwing knives. Our stout, heavy and superbly balanced throwers have become a mainstay in the throwing community and they make regular appearances in throwing competitions all over the world.

Now, due to popular demand, we are proud to introduce a new line of intermediate grade, inexpensive sport throwers. Made to the same exacting standards, and with the same hard spring tempering as our higher end models, these sport models are slightly thinner and lighter but with the same durability and balance that our customers have come to expect from our throwers.

Throwing well and hitting hard when released from either handle or blade, our sport series are available in three distinct blade designs. Suitable for any skill level, they are markedly less expensive than our original pro grade models and make it easier than ever to take up this enjoyable and rewarding pastime.

Cold Steel® President Lynn C. Thompson has been training and experimenting with throwing knives for over three decades.

Although Lynn has trained in competition style throwing, his personal interests have always been grounded in combative application. As a martial artist he has always been fascinated by the use of throwing weapons to distract or wound, while evading or closing distance.

As such, he rarely stands still and throws from a mark. His throwing is often made at speed and while running, dodging or fighting. Therefore, he has long been interested in designing and creating a combative knife that would also serve as an instinctive (and highly effective) throwing knife.

It was with that in mind, that Lynn designed what we call our Gladius Throwing Knife.

Its solid, one-piece tempered steel blade can easily be sharpened and wrapped with Paracord to create a very functional knife, but it is its wide "Roman Point" and superb balance that make it an excellent thrower even at extended distances.

Designed to stick with either its sturdy point or tapered butt, the Gladius Throwing Knife makes a fun and unusual sport thrower as well as a combative option!

Throwing flat and hitting hard with a satisfying "thunk" it's sure to be an unusual and much talked about addition to any throwers collection.

TORPEDO®

Heavy and perfectly balanced, the Torpedo is a lot of fun for target throwing because it's an easy throw from almost any distance. The double tapered points slide effortlessly from the hand for a perfect release and offer twice the sticking potential of a conventional throwing knife. What's more, the heavy 2 lb. weight lets you stand way back from the target (15 yards or more) and really "lob them in there" with surprising force.

Its size, weight and accuracy provide a multitude of advantages for hunting and survival situations. When thrown with skill, the Torpedo delivers enough raw power and lethal penetration to cleanly dispatch animals up to the size of a coyote.

At close range, the Torpedo can stop even the most determined aggressor. Its two-pound weight alone makes it a formidable bone breaker if it should strike on the flat. And its double points offer lethal penetration. What's more, the Torpedo can easily be used as a steel bludgeon or double pointed dagger for last ditch self-defense situations.

TRUE FLIGHT®

There are a bewildering number of throwing knives on the market these days, and it seems that most of them are made out of cheap steel that bends or, in the worse case scenario, stainless steel that breaks. That's why we made the True Flight Throwing Knife.

The Cold Steel® True Flight Throwing Knife beats the competition by a wide margin. For strength, we use 1055 carbon steel and finish it with a black, baked-on protective coat. This makes for a hard, yet resilient blade that will "bounce-back" from any throw. And for added versatility, the True Flight Throwing Knife has a utility edge that will stand-up to your toughest chores.

The True Flight Throwing Knife comes complete with a Cor-Ex™ Sheath.

SURE BALANCE®

Definitely in the heavyweight class, our Sure Balance Throwing Knife is just shy of 13 1/2" long and weighs a little over a pound!

Twice as heavy as most amateur throwing knives, these professional grade knives are a joy to throw. They fly straight and hit like a freight train, sticking in almost any target!

Suitable for any throwing style and perfectly balanced to throw from the point or the edge, these hefty knives are incredibly resilient. With their expert heat treatment and solid 1055 carbon steel construction, they are sure to offer many years of hard service, even when used by the most dedicated throwing enthusiast. The Sure Balance features a narrow but robust point that drives deep into targets with the most satisfying sound in the world, a solid THUMP!

PRO BALANCE®

With its substantial left and dagger like point, our Pro Balance® Throwing Knife is made for the professional knife thrower and amateur throwing enthusiast as well. You can throw from either the blade or handle and it will sink into even hard targets with ease. Made out of sturdy 1055 Carbon steel, with a black, weather resistant finish and equipped with replaceable composite handle scales, it's ready to endure all that you can dish out and will last for hundreds of tournaments and shows.

PERFECT BALANCE®

Our Perfect Balance® Throwing Knife takes inspiration from a 1950's classic. Its center of balance is at the midpoint of its overall length. It hits hard and penetrates its target efficiently because of its considerable weight and fully sharpened clip point. The strong 1055 carbon steel construction, black rust resistant finish, and replaceable composite handle scales, make it durable enough for thousands of throws. Plus, it has an additional benefit in that it can also hold its own as a heavy duty survival knife, cleaver or hatchet.

NEW BATTLE SHADES™

Back in 1980, Cold Steel's first customers and fans were Military and Law Enforcement professionals – and what they valued most was our unwavering commitment to strength.

With that strength in turn, came safety, and we have been at the forefront of research and development in this field ever since. From day one, our products have been specially developed for warriors. So when we began to explore eye wear solutions, we went beyond sunglasses... and developed Battle Shades™!

From boardroom to battlefield, Battle Shades™ have been created for maximum comfort and security. These stylish high performance sunglasses are held to the same exacting standards as our industry leading knives.

Their sleek, low profile and ergonomic frames are remarkably light and comfortable, with integrated soft temple tips and nose pads to aid retention, as well as to increase comfort on typical "hot spots" that occur from prolonged wear.

Our tough, Mil-Spec high impact polarized* polycarbonate lenses not only offer 100% UV (A,B & C) protection, but also meet the Military Standard impact resistance rating**, offering superior coverage and protection in the field.

For added safety and peace of mind, we have added our innovative protective shields to selected models in our line-up. These fully removable shields give additional protection from the distraction (and potential injury) of wind-shear, air born dust, debris and glare, keeping you focused, alert and ready for action!

Each of these supreme eyewear solutions comes complete with a soft microfiber pouch and a durable carry case.

The case features a discreet internal pocket (for carrying a knife, micro-revolver or even just your money clip) and has integrated snap-fit loops so you can carry your Battle Shades™ on a belt, pack, vest or webbing.

Available in a variety of styles, Battle Shades™ are both practical and tactical; perfect for Military, Law Enforcement, and First Respondents in our Emergency Services. They are also an excellent choice for Hunting and outdoor pursuits, shooting, and extreme sports, as well as for every day wear.

If you are a Cold Steel fan, then you'll know to expect the same level of quality and value for money from our Battle Shades™ that you would from our world-renowned knives - and, just like our blades, Battle Shades™ are sure to become a part of your daily carry that you won't be able to leave home without!

KITCHEN CLASSICS

The knives in Kitchen Classics series will race through just about any task you can imagine. These blades are ice tempered and then precision flat ground for maximum cutting power. All models in the series come with a razor sharp edge that lasts and lasts, and some have serrated edges uniquely appropriate to the tasks they were designed to do.

They are made from the same German 4116 Stainless Steel that is used in some of the most expensive German cutlery.

The handles are, in a word, terrific! Carefully designed to ensure a strong, secure, yet comfortable grip, they feature a stiff Zy-Ex™ core on the inside, with a softer, deeply checkered Kray-Ex™ exterior for the kind of non-slip grip that must be felt to be appreciated!

The Kitchen Classics are available for purchase as single items or as a complete set. The set includes an attractive counter-top oak stand, and one of each [except for the Steak Knife, which comes in a group of 6] of the knives shown here.

BIG BORE® BLOWGUNS

The blowgun or blowpipe has a long history that spans the globe. Many authorities believe it was first invented in Malaysia where it migrated through the Malaysian and Indonesian archipelago's finding its way to the Philippines and as far north as Japan. The blowgun, however, was not just a southeastern weapon; it also surfaced in the western hemisphere in the jungles of south and Central America, moving as far north as the southeastern United States.

Blowguns were originally invented to serve as a hunting weapon. They were used to bag small animals and birds, with small stones or hardened clay pellets being used for ammunition. Eventually, most hunters discovered that they could take much larger animals by the use of thin wooden darts that were laced with lethal poisons. The poison was derived from the sap of specially cultivated vines.

Our Big Bore® Blowguns feature large caliber .625 Magnum barrels that make them capable of shooting darts that are 20% faster and three times heavier than our competition. They offer vastly improved killing power compared to smaller, .40 caliber darts.

They are available in 4 foot or 5 foot lengths. And, for extra accuracy and range, we sell a two-foot extension as an accessory. All models come with a mouthpiece, rubber ferrule, dart quiver, and 36 darts (15 Bamboo Darts, 15 Mini Broadhead Darts, and 6 Stun Darts).

Large caliber blowguns like our .625 Magnum® have an effective range out to 20 yards or more. With practice, a skilled user can hit a two-inch circle at amazing distances, delivering a heavy weight dart. That's a payload easily capable of penetrating a half-inch sheet of plywood.

Accuracy and range like this enable an experienced hunter to take small game like doves, quail, squirrels and rabbits in complete silence without danger of over penetration or errant darts striking livestock or humans in the distance.

Shooting a blowgun is great fun. It is an activity that can be enjoyed indoors or out, in sunny or inclement weather. Skill with a blowgun can lead to many inexpensive hunting adventures and stand you in good stead in survival or self-defense situations. Try our Big Bore® .625 Magnum® and you'll soon find yourself addicted to the fun of shooting the world's most powerful blowgun!

2 PIECE BLOWGUN

In the open field, our Big Bore® Blowguns are easy to carry. They're relatively light in weight and, because they come with a rubber ferrule, they make an excellent hiking staff. If, on the other hand you need to pack them or strap one to your pack, you might find things getting a little awkward.

The problem of making our blowguns into a practical item that people can pack with the rest of their gear has vexed us at Cold Steel for a while now...but, at last, we have a solution.

We took our popular five-foot gun and re-configured it as a "take-down" model. It has two tubes that are about two and half feet long with threaded joints and a reinforcing coupling tube for strength. It's the equal of the regular five-foot model in terms of stiffness, accuracy and long-range performance, but has the added advantage of being easy to pack and transport.

PROFESSIONAL .625 BLOWGUNS

While our standard .625 Magnum® Blowguns are awesome, we decided to raise the bar even higher with our new Professional .625 models. Available in 4-foot and 5-foot lengths, they come with a target style mouthpiece and a 3mm thick barrel.

Yep! That makes them almost twice as thick, and 45% heavier than our standard model and clinches their title of heaviest, commercially made blowguns in the world.

Don't miss your chance to take advantage of the increase in accuracy offered by their great weight and rigidity. Don't miss out in the increased toughness they offer as an impact tool in a self-defense situation. Buy your Professional .625 Blowgun today!

DROP FORGED TOMAHAWKS

These superb tomahawks are precision drop forged from 1055 Carbon steel. Drop forging is, without doubt, the best method of manufacture for any impact weapon, particularly one with a cutting edge. During the forging process a metal ingot is heated almost white hot and then formed into shape in a series of progressive dies. The large steel dies are fixed to enormous compressed air hammers. Each die hammers the hot metal into a gradually more finished shape. The steel

THE AMERICAN TOMAHAWK COMPANY® IS A REGISTERED TRADEMARK AND A DIVISION OF GOLD STEEL, INC.

is kneaded and compressed into a completely homogenous mass making the grain structure uniform and minimizing gas pockets or other imperfections that can ruin the construction of a hand forged hawk. This is why most good axes, hatchets, and hammers are drop forged.

These hawks are differentially heat treated. This means that the cutting edge and hammer face is fully hardened, while the balance is left relatively soft to absorb the shock of striking blows.

TRAIL HAWK: Modeled after an early frontier pattern, our Trail Hawk can do it all. It's an excellent chopping tool and has a functional hammer poll with a hardened face so you can drive nails, hammer in stakes, and smash or crush just about anything. Best of all it's extremely lightweight and compact so it's a cinch to tuck it under your belt or lash it to a pack or shooting bag.

RIFLEMAN'S HAWK: The Rifleman's Hawk has a functional hexagonal hammer poll designed for serious work, like pounding nails or stakes. Reminiscent of some early American designs, the Rifleman's Hawk features the "peace pipe" appearance that was commonly used by Native Americans during the last century. In terms of fun and sport, this hawk throws and sticks extremely well. If you want something that hits its target like the proverbial "ton of bricks," then the Rifleman's Hawk is for you!

FRONTIER HAWK: Suitable for re-enactors from any period stretching from the French and Indian War clear up to the final settling of the West in the late 1800's. The authentic, good looking Frontier Hawk is one tough customer you're sure to appreciate. This light weight Hawk is a joy to use too as it reduces wrist, elbow, and shoulder strain without sacrificing anything in chopping power or ease of handling. The merits of its light weight are revealed in combat too because the Frontier Hawk can be used at light speed from any angle and immediately recovered!

SPIKE HAWK: While it's certainly capable of performing utility chores, our Spike Hawk really excels when it's used as a weapon. With one highly effective edge and a long spike, it puts any adversary on the horns of a fierce dilemma: Face the edge in brutal chopping, cutting, slashing and gouging attacks, or risk getting huge deep holes punched in you by the fearsome spike.

To make matters even worse for an attacker, either end of the hawk can be used to hook or trap an opponent's weapon, neck, arm or leg, to control or manipulate the situation to one's advantage. Furthermore, the overall length of the of the hawk measures 9" across making it a wide, stiff platform that can be punched into an incoming weapon arm to momentarily stop its forward motion and immobilize it.

A superbly crafted leather sheath designed to safely house the point and edge is available and sold separately.

NORSE HAWK: During the 10th century, Viking raiders were a familiar and dreaded sight. Ranging as far north as Russia and as far east as Constantinople, the Vikings wielded their terrible, fearsome battle axe. The influence of the Viking weapon indeed far outlasted the reign of the Vikings themselves. Its sleek lines and brute strength may be seen today in axes, hatchets and tomahawks.

Our hawk has a curved cutting edge to facilitate deep, slashing cuts and terminates in two sharp points which are useful in hand-to-hand combat. The bottom point may be used to capture an opponent's shield, leg, arm, shoulder or neck, momentarily immobilizing or bringing him closer so that he'll be easier to deal with. The top point may be used to execute direct chops or, with a thrusting motion, to pierce or gouge. The Norse Hawk is like its ancient Viking ancestors; merciless.

PIPE HAWK: Do you prize the look and authentic lines of a traditional Pipe Hawk, but have little use for the hollow bowl and the strength-compromised, drilled-out wooden "smoking" handle? Well here's a Pipe Hawk without those disadvantageous features.

Precision forged from 1055 carbon steel, the Pipe Hawk offers a long, reasonably wide cutting edge and a solid, fully hardened hammer poll that's turned and ribbed to mimic a hollow pipe bowl. It's fitted with a 22" hickory handle and is heavy enough to be brutally effective as a chopping tool and weapon, plus, its solid bowl will drive nails, spikes and stakes with the power of a framing hammer. Note: Does not function as a smoking pipe. "Bowl" is solid.

SHEATH SEPARATES

Sold separately, these sheaths make it easy to safely carry your tomahawk wherever you go.

1055
HIGH CARBON

WAR HAMMER

A fully armed 13th Century Knight was a true power, capable of plowing through a multitude of opponents while encased in his state of the art plate armor that could shed, deflect or absorb the blows of many of his foes.

Enter the War Hammer- an ideal weapon for use against an opponent who is encased in plate steel. The heavy hammer head could crush the strongest helmet or suit of plate armor with just a few blows and the back spike could rip through helm and plate like a modern can opener!

Now Cold Steel brings you an inexpensive, yet highly effective, recreation of this awesome weapon. Weighing around 2 1/2 lbs., our War Hammer is highly maneuverable and can be easily wielded with one or both hands. The head is drop forged out of 1055 Carbon steel and differentially heat treated. This means the point of the spike and hammer face are fully hardened so they can pierce and crush tough materials without failing while the rest of the hammer is left soft to absorb the shock of heavy blows.

The handle of our War Hammer has been designed to be equally tough. Made of straight grain American Hickory and measuring 30" long it provides tremendous leverage so enormously powerful blows may be struck. To protect the handle we have included a pair of sturdy steel langettes which can be attached below the head with the screws provided. (Some assembly is required. Instructions are included).

TRAIL BOSS

TRAIL BOSS IMPROVED LONGER HANDLE

The Trail Boss is light and compact enough to carry all day in your hand or strapped to your pack, yet heavy and tough enough for chores that would make a hatchet or tomahawk scream for mercy. Featuring a European style head with a 4" blade and a 4 1/2" cutting edge, it takes a big bite with every swing. Plus, it features a very stout straight-grained Hickory handle.

Extensively field-tested by Lynn C. Thompson on a month long hunting trip in the outback of Australia, the Trail Boss was really put to the test. He used it to chop kindling, clear roads and trails, to build blinds and even to chop down a fair sized Gidgee Tree (one of the hardest woods found down under).

NEW VIKING HAND AXE

This classic, historically inspired fighter promises to be a popular and welcome addition to our already hugely successful line of Tomahawks and Axes.

A design collaboration between Lynn C. Thompson, Dave Baker and Rich McDonald, the Viking Hand Axe brings together a stout 30" American Ash handle, an extra broad, sharp cutting edge, a hooking "beard", and up-swept thrusting "horn" to make a formidable fighting axe that would be the pride of any Viking's collection!

TRENCH HAWK® & NEW WAR HAWK®

Our Trench Hawk represents the future of modern tactical Tomahawk design.

Its sharp cutting edge and wedge style spike offer numerous tactical "options" for our nation's modern warriors. Drop forged from 5150 carbon steel and expertly differentially hardened, the head of the Trench Hawk will withstand tremendous blows as well as the awful stress of prolonged use.

The handle of our Trench Hawk is also highly resistant to shock and impact and will withstand abuse that would easily break even a tough hickory handle. And, as an added benefit, is easily and cheaply replaced when finally worn out or broken from repeated throwing.*

Finally, to help protect its owner from its cutting edge and sharp spike, it comes with a patented innovative articulated Secure-Ex™ sheath.

Our War Hawk combines the tactical styling and material used in our famous Trench Hawk with historically inspired design elements from classic fighting hand-axes of old.

With its wide "bearded" axe head and curved reinforced reverse Tanto style spike it is a thoroughly modern fighting hawk and breaching tool – Capable of cutting or smashing through virtually any obstacle!

* NOTE: ANY HANDLE CAN, AND WILL, BREAK EVENTUALLY

VIETNAM
TOMAHAWK

VIETNAM TOMAHAWK

It took Peter LaGana a lifetime of armed combat and months of design and testing to perfect the Vietnam Tomahawk. Now, there's an exact replica of this historic weapon.

Like the original Vietnam Tomahawk, our copy is light enough to be carried all day without causing undue fatigue. In combat, this lightness translates into speed; allowing quick changes in direction, even in mid-stroke!

The blade of the "hawk" offers a wide, upswept primary edge for tremendous cutting, slashing and chopping potential. The secondary edge on the lower side of the head is specially curved and partially sharpened for both a cutting and hooking attack. When combined with the "V" shaped spike on the back of the hawk head, it is wickedly efficient. It comes complete with a leather sheath in the original oxblood color.

AMERICAN HICKORY HANDLE

AXE GANG® HATCHET

For years, Cold Steel has tried to bring to market one of the devastating Chinese styled hatchets used with such awesome effect in countless Kung Fu movies. The Cold Steel version, the Axe Gang® Hatchet, is an authentically formidable weapon, not just a prop for the cameras.

It features a drop-forged head, with a differential heat treatment (hard edge-soft body), and a straight, four inch cutting edge (with sharp corners). In addition to that it has a straight grain American Hickory handle with the Kanji characters that mean "Axe Gang".

The sharp corners of the edge will easily pierce the thickest skull and the razor sharp edge will shear through flesh and bone like it was white bread. Plus due to its substantial weight and straight handle, it's easy to throw with great accuracy and is sure to explode any target with the most violent effect

VIKING AXE

Cold Steel has been a long time believer in the ferocious cutting power of a well-designed Viking Axe. Until recently, we lacked the technical ability to make one to our satisfaction. However, with our new state-of-the-art forging facility, we can offer our customers something truly exceptional.

Our Viking Axe's formidably long, thin blade is fully polished and hand sharpened to a bone-splitting, shield shattering edge. It comes with a robust 10" cutting surface that terminates in two sharp horns or points. Traditionally, the longer top point was used for stabbing, gouging, or parrying, while the slightly shorter bottom point was used to capture an opponent's shield or to hook and immobilize his neck, arms, or legs. To maximize leverage, strength, and dexterity of movement, the Viking Axe is equipped with a very strong, resilient haft.

Made in Maine from the best hickory available, it enhances and amplifies our Viking Axe's lethal potential as a cutting, chopping and stabbing weapon.

89VA
VIKING AXE

POLE AXE

With superior reach and armor-shattering force the Pole Axe represented the great equalizer between the common foot soldier and the terrifying juggernaut that was the Knight on horseback on the medieval battlefield. It was the heavy machine-gun of its day!

The same attributes that made the Pole Axe so renowned on the battlefields of old still ring true today. Easily capable of defeating modern day armor with the same brutal efficiency with which it despatched the Knights of old, the Pole Axe is a true powerhouse of performance.

Through many years of experimenting and cross-training with axes, glaives, halberds and staves from all over the world, and a multitude of martial cultures, Lynn C. Thompson discovered the awesome potential of the Pole Arm against a whole host of opponents, even those outfitted with today's modern armor and tools.

Surprisingly deft in the hand, the Pole Axe is able to hook and entangle an enemy combatant's weapons and limbs, and has the ability to deliver mind-boggling powerful blows that crush or chop anything in its path!

The Pole Axe has long remained a weapon dear to Lynn's heart, so he decided to unveil his own modern interpretation of this formidable tool!

Cold Steel's Pole Axe is expertly drop forged from 1055 carbon steel.

The wickedly sharp axe blade and brutal hammer head are differentially heat treated, leaving the "business" ends of the weapon hard, and the body a little softer to absorb shock and impact.

Our tough American made Ash handles are further strengthened with black steel langettes.

Cold Steel has created a modern monster with devastating power the likes of which has not been seen on the battlefield since the dark ages! There is little on this planet that can withstand the might of the Pole Axe, or the man that wields it!

MAN AT ARMS COLLECTION

The Man at Arms was a warrior, pure and simple. A stalwart and dependable fighter who exhibited great martial prowess with a range of weapons. He was a capable and competent warrior who was the veteran of many conflicts and was often first into the fray. Although he was not a Knight, he fought and trained alongside them as a brother in arms.

To honor these rugged, reliable, salt-of-the-earth warriors we have created a range of true journeyman's weapons that we have called the Man at Arms Collection. Each of these battle-ready pole-arms is deeply blued to a lustrous finish and comes with a premium American wood shaft.

MAA ENGLISH BILL

Like a surprising amount of historical battlefield weapons, the English Bill or "Bill Hook" owes its origins to agricultural use. This ancient forestry tool was used by peasants to hook creeping vines and hard-to-reach branches, clear foliage and – when necessary – even lop heavy limbs from trees. It didn't take much imagination to see the fighting applications of this heavy duty tool.

As it saw more and more use in combat, the Bill began to evolve into a dedicated fighter. Its next incarnation, with its sharpened edges and hooking blades was fast, agile and ferocious. A good Bill in the right hands could hook, entangle, thrust, stab, slice and chop with equal ease and oppose even heavily armed and mounted opponents. An armed force, wielding row after row of these weapons was fearsome to behold!

Our English Bill represents the highest quality battlefield evolution of this formidable tool. With a fully sharpened battle-ready blade spike and hook, supported by an extra deep steel socket and our stout Boar Spear shaft.

MAA SERGEANT'S HALBERD

Our company President Lynn C. Thompson has long been fascinated by Pole Arms, Spears and Halberds.

The Sergeant's Halberd is often seen as a ceremonial item, carried as a badge of rank by officers and NCO's alike in the 18th and 19th Century, it was a much feared weapon of war as well.

Unlike its heavy-duty brethren (see Swiss Halberd) the Sergeant's Halberd was actually developed during the age of firearms and was designed to face foes with less protective armor. Lighter, faster and more maneuverable, the Sergeant's Halberd is a deceptively quick and astonishingly effective weapon.

Our interpretation of the Sergeant's Halberd is representative of the battlefield incarnation of this historical tool. Though it features costly but attractive embellishments and ornamentation, it is a true warrior through and through. Fully sharpened and surprisingly rugged and durable, it can be used as a spear for thrusting, a hook to catch, trap and entangle and as a cutting tool to chop, cut and slice!

The Sergeant's Halberd is a perfect addition to the collection of any historical re-enactor or Western Martial Artist and it makes a terrifically effective emergency self-defense tool when your life is on the line.

MAA SWISS HALBERD

The Swiss have a reputation as a nation of riflemen. This is because men of military age are required to keep a battle rifle and ammunition at home. This, however, is a relatively more recent development. For three hundred years, starting in the 12th Century, the Swiss were widely feared for the terrible havoc they could wreak upon the battlefield with their infamous halberd!

The Swiss Halberd effectively combined the finest attributes of the spear, battle axe and hook into one devastating weapon. It was able to pierce the thickest steel armor, and pulverize a sturdy helmet or shield. The Halberd's "beak" could also be used to drag a heavily armored Knight from his mount to be summarily butchered by the Halberd wielders brothers in arms.

The Cold Steel Swiss Halberd is almost identical to its heavy duty historical counterpart, except that ours is made from modern materials. Featuring a fully sharpened spike, axe blade and beak (hook) it is a multi-faceted weapon that can hack, stab or entangle even a heavily armed and armored opponent.

SPECIAL FORCES SHOVEL

The Special Forces Shovel is modeled after the original Soviet Spetsnaz shovel. The Spetsnaz were the Soviet army's most elite unit, renowned for their deadly efficiency and ruthlessness. Trained to travel light, the Spetsnaz packed only the bare essentials.

This included a unique shovel which had a broad flat blade and 3 sharp versatile edges. Our shovel follows the Soviet design as faithfully as possible with newer improvements in the steel (twice as thick as the original) and heat treatment.

MANY VERSATILE USES:

- To dig foxholes, trenches, & bunkers.
- As a paddle.
- As a cleaver or hatchet.
- Like a throwing tomahawk (with three cutting surfaces to stick instead of one!)
- As a defensive shield against fists, boots, knives, bayonets or even other shovels.

— MAN AT ARMS SPEARS —

The Man at Arms was a warrior, pure and simple. A stalwart and dependable fighter who exhibited great martial prowess with a range of weapons. He was a capable and competent warrior who was the veteran of many conflicts and was often first into the fray. Although he was not a Knight, he fought and trained alongside them as a brother in arms.

To honor these rugged, reliable, salt-of-the-earth warriors we have created a range of true journeyman's weapons that we have called the Man at Arms Collection. Each of these battle-ready spears is deeply blued to a lustrous finish and comes with a premium American wood shaft.

MAA LANCE POINT SPEAR

The Lance Point is (as its name suggests) a formidable weapon when used from horseback. Historically it was used by German, French, British and Indian cavalry troops and could punch through armor and transfix adversaries with ease.

Throughout our research and development testing we were consistently astounded by the penetrative power of the Lance Points hollow ground, spring tempered triangular blade. Puncturing hard targets with the slightest effort and inflicting a devastating entry wound, it was fast, lively in hand and incredibly effective whether used from horseback, on foot or even thrown into appropriate targets!

MAA EUROPEAN BOAR SPEAR

Our European Boar Spear takes inspiration from antique Germanic hunting spears. With its characteristically broad, oversized head and twin cutting edges and pronounced double quillons it is a high performance example of this iconic hunting tool.

Featuring a stout leaf shaped blade with twin cutting edges and a thick reinforcing central spine, the European Boar Spear will stab and cut with surprising ease.

It's sturdy quillons stop the spear from penetrating too deeply when used against dangerous game, and make excellent parrying and trapping tools when fighting a two legged opponent.

Complete with a sturdy, thick premium American Ash shaft, the European Boar Spear is sure to be very popular with the big game hunting community, re-enactors and historical martial artists.

MAA WING SPEAR

The Winged Spear is a true product of the battlefield. Its blade is wide and sharp enough to almost double as a pole arm, while its pronounced wings can be used to trap and pin an opponent's limbs, snag his shield and parry and entangle his weapons.

After countless hours of sparring and experimentation our company President Lynn Thompson and his training partners found many subtle nuances to this surprisingly versatile weapon. Lynn found that the more time you spend "making it your own" the more great opportunities present themselves when sparring and fighting. The head of the Winged Spear even made an effective parrying dagger and short sword on its own!

If you train in Martial Arts, study battlefield arts or have a passion for historical re-enactment, we heartily recommend purchasing a Winged Spear by Cold Steel.

MAA EUROPEAN SPEAR

The European Spear is a prime example of effective and simple design. It is quite simply a spear done right. Its design has changed very little since the Bronze Age. The sheer perfect simplicity of this design has made it a timeless classic. Every inch of this high quality hunting and battlefield tool screams perfection. From its fully sharpened double edged blade to its walnut stained American Ash handle it is a beautiful all-round spear that would have pride of place in any collection.

MAA CLASSIC LEAF SHAPE SPEAR

A true classic, the leaf shaped spear is found throughout history and across the globe. It was used for hunting and warfare for hundreds of years by many nations – and with good reason, it worked!

The long socket imports a great deal of strength, reinforcing the central ridge of the head, while the extra wide double cutting edges and stout point puncture well and inflict a huge wound channel.

With a multitude of battlefield and hunting applications, the leaf shaped spear was not only lightweight and maneuverable, but also suitable for throwing, thrusting and slashing.

Our modern interpretation of the leaf shaped spear features a fully sharpened carbon steel blade with a hard spring temper and a premium American Ash shaft.

ASSEGAI

The spear is one of man's oldest, reliable weapons. Early examples were no more than sticks or poles with fire hardened points. As man learned how to knap flint, cast bronze and forge metals he would quickly adapt these technologies to the spear.

The spear, when used as a thrusting weapon, allowed one to dominate any enemy armed with a shorter weapon like a mace, axe, sword or even a bayonet. When thrown, the spear enabled man to bring down the largest predator while staying safely out of reach of fangs or claws.

With cold forging technology pioneered by Cold Steel®, we can offer high performance thrusting and throwing spears at reasonable prices. All come with premium American Ash shafts and SK-5 medium carbon steel heads. Like traditional spearheads, ours are heat treated and then drawn to a tough spring temper. The concept is that the spear head should flex or bend under impact stresses rather than break or shatter.

The original Assegai was invented by the legendary Zulu King, Shaka in the early 1800's. Its long, broad blade and short handle were ideal for thrusting and revolutionized tribal warfare in Southern Africa. Our Assegai has all the features that made the original so deadly. It is available with a short shaft for thrusting or a full length throwing shaft, and comes complete with a Secure-Ex® sheath.

BOAR SPEAR

For 200 years, the boar spear reigned supreme as the staff weapon of choice in the forests and often the battlefield as well. Only the invention of reliable firearms in the 18th century could fade its renown. It would have disappeared altogether if not for the decadent tastes of the Northern European nobility. To them, hunting with a firearm was a pale substitute for the thrill of hand to hand combat in the forest with nothing but a spear.

You too can enjoy the same excitement with Cold Steel's® modern recreation of this classic spear. Cold forged out of medium carbon SK-5 steel and heat treated to a spring temper, the massive blade is designed to flex under stress instead of breaking.

It's sharpened with a good utility edge and features a sturdy reinforcing rib to make it as stiff as possible for maximum penetration. The Boar Spear comes complete with a stout premium ash shaft and a Secure-Ex® Sheath.

NEW TIGER FORK

Back in the early 1990's, Cold Steel's President Lynn C. Thompson purchased a handmade Chinese Tiger Fork to add to his collection. He fitted it with an old rattan staff and has trained with it ever since.

Lynn greatly enjoys reading tales of hunting exploits in historical accounts and had read several stories about Chinese hunters using these giant forked tools to capture and kill big cats. He also had the pleasure of talking to (and training with) Chinese Martial Artists about how this tool was modified as a weapon of war and its application as a formidable fighting implement.

After 20 years, Lynn has finally brought his own version of the Fighting Tiger Fork to a modern audience.

Our interpretation of this classic Martial Artist's weapon features an elongated central spike to maximize its thrusting potential and inwardly curved outer forks to increase the success of trapping techniques.

By deftly twisting and turning the Tiger Fork in his or her hands, a skilled Martial Artist can not only catch, parry, deflect and entangle an opponent's weapon, but also disarm them, throw them or even lock their joints before delivering a coup de grace.

SAMBURU SPEARS

The Samburu tribe who inhabit Kenya's rugged northern frontier are a tall, lean people who eke out a living as semi-nomadic herders of sheep, goats, donkeys, camels and cattle.

The warriors of the tribe known as "Lmurrn" are particularly impressive, as they never cut their long braided hair and decorate their faces and torsos in beautifully intricate patterns using a cosmetic mixture made from animal fat and red ochre.

Since their flocks and herds are constantly menaced by predators and subject to raids by lawless "Shiftas" (bandits) from Somalia, they seldom venture outside their "Kraals" (a kind of makeshift hut) without being thoroughly armed.

In fact, no warrior worthy of his name would think of being caught without his spears. You see, the Samburu warrior's throwing spear is the most advanced, state of the art spear of its type on the planet. With this extraordinary spear, warriors routinely dispatch marauding leopards, lions and even those firearm toting bandits at unheard of distances.

Each of our Samburu spears break down into three components: The first is the spear head itself, permanently welded to a thick steel shaft. Second is the counter balancing butt spike also known as the shoe. This is used as an alternative point for practice throwing, preserving the actual spear blade itself for more serious work. Third is the black, Hickory handle with a double taper connecting the head and shoe.

All of our Samburu spears come unassembled for ease of transportation. All you have to do is fit the blade and butt spike tightly to the handle and attach them with the provided retaining screws. And, they all come complete with a Secure-Ex® sheath.

These spears could be described as the 300 Winchester Magnum of the spear world. They can be used at long range, fly straight, have a flat trajectory, hit hard and penetrate deep. Like the 300 Win Mag, they can be used to take any animal in North America.

NOTE: WE'VE MADE OUR SAMBURU SPEARS AS TOUGH AS POSSIBLE. HOWEVER, IF YOU BEND YOUR SPEAR SHAFT OR "SHOE" (BUTT SPIKE), IT CAN BE EASILY STRAIGHTENED IN A VISE OR WITH A HAMMER, AND THE TOUGH HICKORY HANDLE OF YOUR SPEAR CAN EVENTUALLY BREAK, SO PLEASE BE PREPARED TO REPLACE IT.

AFRICAN WALKING STICK

The Zulus are perhaps the fiercest, most combative tribe in all South Africa. In the early 1800's the Zulu King, Shaka, subjugated the vast area of land between the Phongolo and Mzimkhulu rivers and laid the foundations for the Zulu Nation. Then in 1879 the Zulus handed the British one of the most humiliating defeats in history at the battle of Isandlwana, when they annihilated an entire column of 1200 Englishmen (who were supported by artillery and cavalry), and did it with little more than cowhide shields and their Assegais, or short stabbing spears. Even to this day, a Zulu tribesman is not somebody to be trifled with lightly.

The thing that distinguishes the Zulu people most is their fondness for using a Knob Kerrie, or walking stick. Our President, Lynn C. Thompson, who regularly hunts in South Africa, has amassed an impressive collection of these handmade sticks. Most of them are made from indigenous African hardwoods like Wild Olive, Pink Ivory, and Red Bush Willow, and are topped with a distinctive ball or knob.

Adapted for the western marketplace, our African Walking Stick features the best parts of traditional Zulu Kerries; like an undulating shaft, and the traditional geodesic ball grip. However, instead of using a costly exotic hardwood, we've made ours out of black Polypropylene. This means that, in addition to being virtually unbreakable, it's also impervious to the elements. It will never rot, warp, crack, splinter, swell, shrink, mildew or fade, and it's ready for all the wear and tear you, and the world, can dish out.

Although its primary mission is to be a walking stick to aid one's balance when crossing uneven, slippery, wet or rough terrain, it can also serve as a pointer, lever, or probe. It also makes a formidable tool for self-defense in an emergency.

IRISH BLACKTHORN WALKING STICK

The Blackthorn bush is found throughout Ireland and the British Isles. It has been prized for centuries as a material for premium walking sticks. The original Blackthorn sticks were 2 to 4 foot long Irish shillelachs (the national weapon of rural Ireland). In expert hands the shillelagh was so fearsome that during the final occupation of Ireland, the English outlawed it. To get around the law, the Irish turned the shillelagh into a 3-foot walking stick. The English didn't want to appear unreasonable by outlawing walking sticks too, so the Irish kept their modified shillelachs and the world gained a beautiful and functional walking stick known simply as the Blackthorn.

Cold Steel made the effort to obtain and sell authentic Blackthorn sticks over fifteen years ago, but the venture turned out to be disappointing, and not because the sticks didn't sell well. It was because Blackthorn is difficult to come by and, since it's grown and not manufactured, it is somewhat inconsistent in quality.

Cold Steel's recent forays into injected molded polypropylene products has yielded some impressive results and now we have produced a new polypropylene Blackthorn that has all of the advantages of real Blackthorn and none of its pitfalls.

Our Irish Blackthorn Walking Stick is inspired by an authentic Blackthorn from Cold Steel President, Lynn C. Thompson's private collection. It was copied carefully, and then artfully modified to a point where it not only mimics nature, but actually rivals and supersedes anything the natural world could

produce! If nature had fashioned the most perfect Blackthorn stick, and you were lucky enough to come by it, our Irish Blackthorn Walking Stick is what it would look like. It's a superb faux Blackthorn stick, and since it's injection molded from polypropylene, it will never warp, crack, swell up, or splinter and is easy to maintain with a little soap and water.

DRAGON WALKING STICK

The mythical dragon has captured the imagination of man for centuries. Asian folklore casts them as benign creatures, man's allies in a hostile world, or as symbols of imperial Chinese power, used as motifs on palace walls, and on soldier's breastplates. In the west, they were known to be fierce adversaries, fire breathing, clever beasts who rained destruction and leveled villages. The brave knight who slew one could return to his village after winning the hand of the fetching fair maiden he saved from the dragon's wrath.

Legends aside, a dragon is a powerful creature possessed of extraordinary physical attributes, which command respect across the board. It is for this reason we have chosen to use the dragon as the inspiration for our latest walking stick. It is modeled after an intricately carved Dragon Stick from our President, Lynn C. Thompson's collection and is reproduced using expensive, hand engraved injection molds. The detailing is astonishing, with scales running the full length of the undulating shaft, and a fearsome face with snarling fangs, it is an imposing stick you'll be proud to be seen with on almost any occasion.

It is fashioned, like many of our other walking sticks, from the highest grade of high impact Polypropylene available, assuring its imperviousness to the elements and guaranteeing it is virtually indestructible. Black in color and sinuous in shape and form, it offers light to medium support and a number of grip options making it unusually suitable as an aid to balance as well as a powerful ally in an emergency self defense situation.

SPECIFICATIONS:
WEIGHT: 36 oz. 91PDR
HEAD: 4 5/8" DRAGON

POLYPROPYLENE STICK

SLIM STICK

Our Slim Stick represents a new departure in the world of elegant walking sticks.

It's light as a feather, yet stiff and rigid enough to offer surprisingly good support when crossing wet, slippery streets or negotiating cracked broken sidewalks. It takes its inspiration from similar sticks used in the Filipino Martial Arts and Boxe Française (Savate). It's amazingly tough, strong, and blindingly fast.

The Slim Stick's incredible weight to speed ratio, combined with its strength and rigidity, is the result of the materials used in its fabrication. The mirror polished "dimpled" ball head is fashioned out of solid 6061 aluminum and double silver anodized to resist abrasion and tarnish.

But the real weight economy was achieved in the construction of its unique shaft. Spun on a custom made mandrel from 100% black and silver carbon fiber thread it's incredibly handsome and strong and, in our very severe impact tests, proved to be virtually unbreakable!

Plus, we have equipped the Slim Stick with a small but highly functional rubber ferrule, which really grips most surfaces and is easily replaced when worn out.

If you're looking for a new, cool stick that can be welded fast as light and provides real functional support and balance, then the Slim Stick is definitely for you.

CITY STICK & NEW PISTOL GRIP CITY STICK

Here's are some classy walking sticks that are just at home at the opera as they are on a stroll through the urban jungle. The City Stick's glossy black shafts are made out of eleven layers of fiberglass which, in our impact tests, proved to be virtually unbreakable.

They're all topped with a lightweight 6160 Aluminium head that's available in two styles, the Basic Grip or our Pistol Grip style, which is designed to fit one's hand like a 17th century pistol butt! Both have been given a mirror polished finish, and the grips are also removable so that they can be easily engraved or modified to suit your tastes.

The bases are fitted with a thick rubber ferrule to keep you from slipping on the mean streets and cracked sidewalks.

BROOKLYN SERIES

Ever since their release back in 2006, our Brooklyn Series of Baseball Bats have been consistent fan favorites!

Precision injection molded out of the heaviest-grade high-impact polypropylene that we can find, these bats just can't be broken through impact alone.

As they are made from a polymer, rather than wood or aluminum, they are not only stronger than traditional bats, but they are more durable too! Our Brooklyn Bats won't rot, crack, or splinter, or even fade! You needn't worry about dirt affecting them either, since they're impervious to the elements and clean up with little more than soap and water.

They're versatile too! Like any other baseball bat, croquet mallet, golf club or hockey stick, they can be used in an emergency as an extremely effective self-defense tool. You can keep one behind the front door, under the bed, or in the trunk of your car and forget about it until you need it.

They can be used as game bats, practice bats, warm-up bats, loaner bats, school or league bats or kid's bats. They can also serve as cross over trainers to develop strength, agility and eye / hand coordination for those studying Martial Arts.

From our micro sized Souvenir Bat (the Brooklyn Shorty) to our epic over-sized beast bat (the Whopper) and all of the other models in between, we're sure to have the bat for you!

Reasonably priced, versatile, useful and virtually unbreakable, there's no excuse not to own a Brooklyn Bat by Cold Steel!

NEW BROOKLYN WHOPPER

NEW FOR 2015! The Brooklyn Whopper is the biggest bat we've ever made. At 38 inches, the Whopper is the maximum allowable sized bat for Major League Baseball, and weighing in at just over 48 oz. it's a certified monster! This massive, king-sized Baseball Bat is perfect for strength and conditioning training, swing practice and warm ups – and when it's time to hit something, well, you are sure to knock it out of the park!

BOOMERANG

Throwing a boomerang is just plain fun and has a lot of benefits that are overlooked today. Besides being a useful hunting arm, throwing a boomerang can be good exercise while dramatically increasing eye hand coordination. Anyone who shoots a bow, throws a spear, swings a bat, stick, sword, golf club, racquet or throws any kind or size of ball will benefit from learning how to throw and practice regularly with a boomerang.

Since we are in the business of making things to throw, it was only natural for us to try and improve on the boomerang by making our own, non-returning version. Injected molded from high impact Polypropylene, with a wood grain texture, and sporting the most aerodynamic length, shape and cross section we could devise, our boomerang fills the bill.

You can use it for hunting, target throwing, and distance throwing and, in a pinch, it will also serve admirably as a highly effective self-defense tool as well.

The boomerang, or throwing stick has been used on every continent from time immemorial and is still found in use as a hunting tool in isolated pockets around the globe even today. Fashioned in various shapes, forms and sizes and made from wood, bone, horn and even metal, it was most effective when used to harvest game birds, water fowl and small game.

Today, the boomerang or throwing stick is most closely associated with Australia where many original inhabitants (Aborigines) still possess the skill and knowledge to use them to put meat on the table. Affordably priced, incredibly durable, our Boomerang is fun for the whole family and will provide years of hard use and entertainment.

GUNSTOCK WAR CLUB

Cold Steel is proud to introduce our modern interpretation of this iconic, culturally significant and wholly American implement of war.

In the early sixteenth century, American Indians observed the devastating potential of a rifle stock as a bludgeoning weapon, and they wasted no time in fashioning their own war clubs based upon its basic shape. Made of straight grain hard woods like Hornbeam, Maple, Ash, Hickory or Oak, they hit with remarkable force and proved to be extremely potent tools, especially when enhanced by the addition of a short point or even knife blades.

In fact, the Gunstock War Club became so popular it soon migrated as far as the Pacific coast where it endured clear into the 1880's. It remains an iconic ceremonial item to this very day.

Custom designed by Bladesmith Rich Mc Donald; Cold Steel's version of this fascinating tool incorporates all the best features from historical examples, including the ridged center line, sharp point, and the classic "Fawn's Foot" handle.

Instead of using traditional hardwoods, we chose to make our War Club from injection molded high impact polypropylene. This material is highly resistant to shock and is practically unbreakable; making it particularly suitable for use in impact weaponry. As an added bonus, this material is highly resistant to the elements and won't warp, rot, crack or splinter like wooden versions.

For those interested in re-enacting periods of our frontier history, the War Club features a very realistic wood grain texturing, which can be painted to replicate a wooden finish.

INDIAN WAR CLUB

The Ball Headed War Club first saw common use in the early 16th century and was popular with the warrior tribes of the American Eastern seaboard.

It has been speculated that the widespread adoption of this weapon was because it was relatively easy to manufacture, in that it required little or no metal, and most of all - because it was unbelievably effective!

Lynn C. Thompson is an avid collector of wooden weaponry and ethnographic arms, and when he saw a beautiful example of a Ball Headed War Club made by custom Bladesmith Rich McDonald, he jumped at the chance to work with Rich to reproduce it for a modern audience.

Cold Steel's modern version of this fascinating tool is injection molded from weatherproof high-impact polymer materials that are virtually impervious to impact. This material is highly resistant to the elements and won't warp, rot, crack or splinter like wooden versions.

Each club is approximately 2 ft. long with a 3 1/4" diameter ball head, and fitted with a removable blunt steel spike.

For historical re-enactors the surface has a realistic wood grain finish that can be easily painted and customized with brass studs, tacks, or feathers.

NIGHTSHADE® SERIES

Black as a moonless night and silent as the grave...these are the qualities that make up our lightweight Nightshade® series. Most are detailed reproductions of existing Cold Steel® favorites and some are new designs representing the newest trends in high-tech, covert construction. Made from Griv-Ex™—the latest in fiberglass reinforced plastic, and stronger than even the super tough Zy-Ex™ we have used in earlier models—they are UV and heat stabilized, making them impervious to the elements.

One of the most unique features of these knives is their handles. They are made from deeply checkered Kray-Ex™ that has been molded directly to the blade tangs. The use of Kray-Ex™ in knife handles is a Cold Steel® innovation that dates back to the early 1980's. It has been readily copied by most of our competitors because it offers a superior, slightly tacky, gripping surface that is unaffected by heat, cold, or moisture. It never rusts, warps, cracks or splits even in the most extreme environments.

Our Nightshade® knives are light enough to be tied, tucked, or taped just about anywhere on one's person. And, since they are impervious to heat, cold, moisture and extreme weather they are a natural to hide both inside and outside of your house. They can be hidden virtually everywhere from the hedges and flowerpots in your yard, to the refrigerator, bookshelves, and closets in your house. Keep one in every room of the house, from the laundry room to the bathroom shower! With violent home invasions on the rise a strategically placed Nightshade® knife could save the day, and even your life.

KOGA SD

The late Bob Koga began his martial arts career at age 12 starting with Judo and moving on to wrestling in high school. After graduation Bob joined the Air Force and, while stationed in Japan, he resumed his Judo training along with Jiu Jitsu, Jo-do and Aikido. After finishing his stint in the Air Force, Bob moved to Los Angeles where he joined the LAPD. During his tenure with the LAPD, Bob became an outspoken proponent of the straight baton as opposed to the PR24® or side handle baton.

The Koga SD's are made of virtually unbreakable plastic, and can increase the ability of the average person to defend himself several times over. With proper training, they can function as a fantastic aid in leverage when obtaining joint locks or submission holds. But where they really shine is as an intermediate impact tool. You see, police and civilians alike face a perplexing dilemma when contemplating employing fist or baton blows. Blows struck with the fist may be too weak, or worse, result in a broken hand, while blows struck with a baton may be too powerful resulting in grave injury or even death. The Koga SD's however, solve this problem, neatly bridging the gap by concentrating and magnifying the effect of hand blows while minimizing the likelihood of permanent injury or death. If you're looking to expand your continuum of force options in a self-defense situation, we heartily suggest you buy a Koga SD.

POCKET SHARK®

As the saying goes, "the pen is mightier than the sword." Indeed, Cold Steel makes some mighty strong swords, but this little pen makes for some clever competition. It's the biggest, baddest, permanent marker around!

Superficially, it shares many features common to most markers, but appearances can be deceptive. For starters, it's made from high impact plastic and features walls that are 4 times thicker than similar markers. This means it's built for impact and will survive the meanest blows and roughest treatment imaginable and still function like new. Drop it, smash it, roll over it with a car, and it will bounce back.

Plus, the screw on cap will stay in place and won't pop off like a regular marker's cap and leak all over your clothes.

It's easy to carry too. Just clip it to a shirt or coat pocket, or carry in your purse, pack or brief case. Don't spend another day without one!

HONEY COMB

Look smart and feel secure anywhere with our personal grooming aid, the Honey Comb. Precision manufactured at great expense, it has the innocuous appearance of a simple hairbrush, but the fully functional brush also acts as a sheath that conceals a highly effective stiletto dagger! The 3 1/2" long dagger has a 1/2" thick cruciform cross section and tapers to a needle like point, while the superbly designed handle is designed to facilitate almost any gripping method.

For the ultimate in strength and stiffness, the Honey Comb's cruciform dagger has been precision injection molded from Zy-Ex™ a tough, stiff nylon and fiberglass composite that contains no metal and is impervious to the elements.

With its innocent appearance and usefulness both as a dagger and a hairbrush, we believe the Honey Comb is the all around answer to personal defense at home at work or overseas.

As a hairbrush it's particularly appropriate in glove compartments, travel luggage, or a woman's handbag and will look perfectly natural in virtually any environment. Its light weight, and effectiveness make it an ideal self-defense weapon especially for women.

CRUCIFORM DAGGER

The Cruciform Dagger has a carefully designed 3 1/2" long Stiletto blade and a 1/2" thick cruciform cross section that tapers to a needle like point. It features a somewhat unique cruciform handle, that's designed to facilitate almost any gripping method.

It's precision injection molded from Zy-Ex™, for the ultimate in strength and stiffness. Zy-Ex™ is a tough, stiff nylon and fiberglass composite that contains no metal and is impervious to the elements.

It's particularly appropriate in glove compartments, travel luggage, or a handbag and will look perfectly natural in virtually any environment. It's lightweight, and effective, making it an ideal self-defense weapon.

LATIN MACHETE SERIES

Have you been looking for a machete with extra reach and leverage? Perhaps something with a more traditional style blade and handle? Then Cold Steel has the tools for you! Our Latin Style Machetes are available in three blade lengths from 18 to 24 inches. With their non-slip, wear resistant handles, they are perfect in almost any environment from the jungle to the forest or even on the farm.

NEW LATIN MACHETE PLUS: SAW BACKED MACHETES

Extensively field tested in both America and Australia, these saw-backed Machetes have been intensively used in the toughest conditions and proved themselves time and time again.

These real working saw teeth – not aesthetic affectations like many of our competitor’s offerings! – are capable of putting in great work. Try one today, you won’t be disappointed!

TWO HANDED LATIN MACHETE

The extra long handle on this model can easily be used one handed (it’s tremendously well balanced) but will comfortably accommodate two hands as well. It’s unsurpassed for sheer versatility in the field, on the farm or in a forest. Plus, the 21 inch Latin styled blade has the potential to make delicate, precision cuts in tight quarters or deliver brutal limb loppers in an instant. If you like the look and feel of traditional Latin machetes, we’re sure you’re going to love the extra horsepower available in our new two handed model.

KUKRI MACHETES

There's no single edged weapon that we can think of that can out-chop or out-cut a good Kukri. It's true that some of the best Kukris, like our Gurkha model, can be somewhat expensive, and while that "thoroughbred" performs extraordinarily well for the money that it costs, it sometimes seems that what's required is a good, inexpensive, "workhorse" model.

Our Kukri Machetes are those workhorses. They are available in two sizes, one has a thirteen inch blade and the other, our "Magnum" model, has a whopping seventeen inch blade. Both are ready to plow through the toughest chores life can dish out. Each features the distinctive weight-forward balance of our "top-of-the-line" model, and always present their edge on an angle so they're guaranteed to "bite" deep with every stroke. Additionally, they come complete with a sturdy Cor-Ex™ sheath! They're a solid value, ready for long, hard work.

KUKRI PLUS MACHETE

The Kukri Plus Machete features some of the finest innovations in Kukri design. It's wide, curved blade will cut and shear amazingly well, making huge cuts that would be the envy of many small swords, while its stout spine and durable tip make it a very functional and handy bushcraft tool.

It's integral steel guard keeps you hand free from harm when using the knife for particularly hard cutting chores, and also offers a multitude of advantages should you ever be forced to use the Kukri Plus Machete as a last ditch self-defense tool!

Its full tang is completely encapsulated in a comfortable and durable polypropylene handle that has been ergonomically designed for comfort and safety, allowing you to keep a secure grip on the Machete even in the most inclement conditions.

Featuring a rust resistant baked on matte black coating, the fully sharpened 1055 Carbon Steel blade is safely and securely held in a sturdy Cor-Ex sheath.

ROYAL KUKRI MACHETE

Cold Steel President, Lynn C. Thompson has been exploring the potential of the Kukri for over two decades. It's hard to find a more versatile knife. A stalwart ally in a tight spot and an indispensable survival tool, a good Kukri is truly apocalypse proof!

When he chose to design a new Kukri, Lynn looked to his many hours fighting in Cold Steel's training facility for inspiration. Where other companies look to hired help for their "knowledge", standing on the shoulders of giants, Lynn and his team invested their own blood, sweat and tears, endlessly sparring with different prototypes looking for ways to improve upon this already near perfect design.

Lynn recognized that many of the qualities that make a great fighting knife also make a great bushcraft tool. A sharp blade, strong tip, good hand protection and a versatile handle are all key. Stripping the Kukri back to its bare basics, he then began re-designing the knife from the ground up. The re-imagined blade was presented at an entirely new angle, keeping the cutting power that made the Kukri the stuff of legend, but increasing its thrusting and piercing power. The handle, with its integral guard kept the user's precious digits safe from harm while changing the balance and heft of the knife considerably.

The newly christened Royal Kukri was then extensively field-tested. Proving to be an outstanding multi-functional bush knife. Capable of the toughest bushcraft chores, from chopping firewood to dispatching wounded game, it also provided the comfort of a last resort self defense option.

With a rust resistant baked on matte black coating, the fully sharpened 1055 Carbon Steel blade is safely and securely held in a sturdy Cor-Ex™ sheath.

BARONG MACHETE

The Barong is common throughout all of Southeast Asia. Often used as an agricultural tool, it is also known as a savagely effective implement of warfare.

A popular blade style within the Filipino martial arts, the Barong has a fearsome reputation for inflicting massive wounds and deep slashing cuts.

The Barong also makes an excellent bushcraft tool. Cleaving vines and branches with ease. Its classically shaped down-turned polypropylene handle anchors the blade in the hand and helps to resist centrifugal forces when making hard chopping or slashing strokes.

Its beautifully curved 18 inch leaf shaped blade is made from 1055 Carbon Steel with a baked on, matte black finish to aid in rust resistance, and each Barong comes complete with a Cor-Ex™ sheath for ease of carry and convenience of use.

Many of the employees here at Cold Steel, including our company President Lynn C. Thompson are practitioners of the Filipino Martial Arts and have great admiration for the Barong. We are proud to release this new interpretation of the classic Barong to our modern tactical machete offerings.

GLADIUS MACHETE

Derived from the sword used by Celtic tribes of ancient Iberia (Spain) and adopted by the Roman Legions, the Gladius, with its long, narrow point and wasp waisted blade, was the scourge of the battlefield and often the last thing seen or felt by Rome's enemies.

Ever popular, the Gladius is still in demand almost 2000 years later and is one of our most frequently requested swords to make, so we have decided to offer a modern version of this ancient classic in a very affordable machete/sword format.

Made from 1055 Carbon steel and hand sharpened to a murderous point and battle ready edge, it offers 18" of unprecedented piercing and slashing power at a bargain price.

Sporting an extra wide, full tang for strength and a classically inspired handle, it offers the standard guard and ball shapedommel of years gone by. Made of high impact Polypropylene, it's impervious to the elements, rugged beyond belief and most importantly, comes complete with a sturdy Cor-Ex™ sheath and belt loop.

SPECIFICATIONS:

WEIGHT: 27.2 oz.
THICK: 2.8 mm

OVERALL: 25 7/8"

CUTLASS MACHETE

Inspired by our 1917 Cutlass, our Cutlass Machete features a stiff, cut and thrust 1055 Carbon steel blade that's just as useful for repelling boarders as it is for hacking a path through the blackberries to get to your favorite fishing hole. Complete with a steel reinforced knuckle bow guard and a sturdy Cor-Ex™ scabbard, it's ready for your next adventure be it on land or sea.

SPECIFICATIONS:

WEIGHT: 26.6 oz.
THICK: 2.8 mm
BLADE: 24"
OVERALL: 30"

BOWIE MACHETE

Cold Steel's Bowie Point Machete is quick, fast, and lively in the hand, making it an outstanding slashing blade and admirable chopper. But its most winning attribute is its clipped point, which makes it an excellent piercing tool. It will penetrate just about any obstacle in its path and will lend itself to knife-like utility jobs when a smaller handier blade is unavailable!

If you always wanted a Bowie knife, but could never afford one, the Cold Steel Bowie Machete can be yours for a fraction of the price.

Fully sharpened, with a tough, baked-on matte black rust resistant coating and equipped with a sturdy Core-Ex™ sheath, you will be proud to add this Machete to your collection.

SPECIFICATIONS:

WEIGHT: 16.2 oz.
THICK: 2.8mm

GARDEN & CAMP MACHETE

Our Garden & Camp Machete is our interpretation of a much-used agricultural tool from Africa. Cold Steel's President Lynn C. Thompson has used them for many years, building blinds and hides and cutting grass when prepping shelters during his time hunting in Africa. He was impressed by their simple, utilitarian design and he soon realized that he always made sure there was at least one of these tools on hand before embarking on any prolonged hunting trip. It therefore made a lot of sense for him to begin exploring his own version of this African tool for an international audience.

Incredibly intuitive to use, the Garden & Camp Machete is a quick study in economy of motion. By slightly bending your knees and leisurely swinging the machete with a back and forth motion, you can make short work of many cutting tasks.

Use it to trim the grass and weeds from your garden, or as a lightweight and handy cutting tool to clear brush from camp sites, hunting blinds and shooting lanes. Use it as a probe in long grass to look for obstructions, obstacles or varmints. In a last ditch self-defense situation the Garden & Camp Machete is lightning fast, with exceptional reach and a formidable cutting edge that can strike from many different angles.

Its strong, sharp and long double edged blade is super lightweight and a breeze to carry and use all day. Throw it in the trunk of your car, hang it from the back door of your cabin, keep it near your tent when camping or lash it to your backpack. You'll find you quickly can't imagine leaving the house for an outdoor adventure without one!

SMATCHET

Cold Steel is proud to breathe new life into a classic World War II knife called the Smatchet.

Famed for its countless exploits in the trenches, the rubble-strewn streets and the thick jungle, it carved out a reputation for ferocious effectiveness that still echoes today.

A knife that gained much of its notoriety in the hellish melee of trench warfare, the Smatchet was all about function. Its flat, heavy blade struck fear into the enemy and provided a distinct psychological edge to the wielder. Just holding a Smatchet instilled confidence and a grim determination for getting the job done. Its very name became a byword for guts, glory and bravery.

Our modern interpretation of this true military classic features the same instantly recognizable broad spear point and false edge with the addition of a strong, steel reinforced guard and rugged weather-proof handle with a generous lanyard hole in its contoured, comfortable and virtually unbreakable polypropylene handle.

A formidable tool that can only be described as part machete, part short sword, our Smatchet is fully sharpened and coated with a rust resistant matte finish that is baked onto the 1055 Carbon Steel blade for extra durability.

Affordable, strong and reliable, the Smatchet is made to survive.

When you feel the comforting heft of the Smatchet hanging from your belt or pack in its Cor-Ex™ sheath you will know the confidence that comes from having a knife that can handle the very worst that the world has to throw at you.

TWO HANDED KUKRI MACHETE

Our two handed Kukri Machete has proven to be a highly praised addition to our Machete line up. It offers phenomenal cutting performance as an agricultural, camping, gardening and survival tool; cutting trees saplings, vines, thorn bushes, cane, reeds, bamboo, corn stocks and sugar cane with equal ease.

It is also a popular choice as a fast ditch self-defense tool, as its short broad blade and sharp point offer astonishing cutting power and thrusting potential—and when combined with the huge reach and leverage afforded by its oversized handle, it's truly a force to be reckoned with.

SC97THKG
TWO HANDED
KUKRI
MACHETE
OPTIONAL
SHEATH

TWO HANDED MACHETE

Strong, rugged and reliable, the Two Handed Machete packs a huge amount of chopping power into a surprisingly lightweight package. Perfectly balanced, it works amazingly well with either one or two hands. Its long handle counter balances the blade making it a joy to use.

Easily carried on the back, it's lighter and more versatile than any axe, and (thanks to its long handle) it has far greater reach than almost all of the machetes on the market today.

NEW CHINESE SWORD MACHETE

The latest addition to our much imitated but never equaled series of historically inspired sword / machete hybrids, the Chinese Sword Machete mimics the look and design of our record breaking Chinese War Sword!

Its super wide, deeply curved blade will cut and shear astonishingly well, while its tough one-piece full-tang construction, with over molded polypropylene handles ensure maximum strength and durability.

Plasma cut from expertly heat treated 1055 carbon steel, and then hand ground and sharpened here at our Cold Steel HQ in Ventura CA, the Chinese War Sword Machete has a pronounced blade heavy design which facilitates amazing cutting power while not being unwieldy or clumsy.

Supplied with a custom made Cordura back sheath, this beast of a machete will out-perform many swords—and at a fraction of the cost!

ALL TERRAIN CHOPPER

The shining star of many of our recent performance tests, our new All Terrain Chopper will out-cut many Machetes, and even put some swords to shame! The sheer cutting power harnessed within the All Terrain Chopper's big, wide, slant-tipped, fully sharpened blade has to be seen to be believed! A well-placed swipe from this powerhouse of a machete will lay waste to almost any obstacle the wilderness may lay before you. Worn either slung over the shoulder or across the back in its weight-distributing carry sheath, the All Terrain Chopper is surprisingly comfortable even when worn for extended periods of time.

Several of our crew members put our carry sheath to the test by wearing the All Terrain Chopper all day while working in our warehouse, training in our gym and going about their usual daily activities. Despite the size and heft of this Machete, all reported back that they found the All Terrain Chopper very easy to wear and that they quickly forgot they were even carrying it!

Exhaustively field tested in Australia by Lynn C. Thompson the All Terrain Chopper proved to be a stalwart hunting and wilderness survival companion. More than just a machete, and the next best thing to an axe, it packed astonishing chopping power into an easy to carry package.

A great addition to a load out, the All Terrain Chopper delivers superb performance when you need it.

THAI MACHETE

Taking inspiration from Thai swords in his personal collection and from his extensive training in the Thai Martial Arts, Lynn Thompson began exploring his own interpretation of a Thai sword in our Machete format.

Lynn has been an active practitioner of Thai Martial Arts since the early 1980s. Studying Thai Boxing with Bill Berg and the late Ernie Franco before exploring Muay Thai and Krabi Krabong in greater depth with his current training partner and instructor of over 13 years, Ron Balicki.

The Thai Machete represents the culmination of over 4 years of development and refinement. Like the Thai swords that inspired it, our Machete is beautifully balanced, with a keen cutting edge and a sharp tip. Though most commonly seen used in pairs when practicing traditional Thai fighting arts, these long curved blades are amazingly versatile. Light enough to swing one handed, but with a long enough handle to employ a two handed grip for extra leverage and cutting power.

The Thai Machete's wide blade and curved cutting edge make it an excellent brush cutter. Slicing grass, vines and light foliage with ease. Its fully sharpened blade is made from the same tough 1055 Carbon Steel as the other classic blades in our incredibly popular Machete line up. Its tough, traditional looking polypropylene handle has a flattened oval grip that won't twist or turn in your hand, while its steel reinforced guard offers surprisingly good hand protection.

NEW TACTICAL KATANA MACHETE

The latest addition to our Katana Machete series, the Tactical Katana is closely modeled after our hugely popular and record breaking Warrior Series Katana.

With its deeply curved blade, it offers more "sword-like" cutting performance; and with its broad full tang, solid steel tsuba and injection over-molded high impact polymer handle, it's incredibly durable.

We spared no expense to re-create the look of a traditional cord wrapped handle, Fuchi and Kashira but used modern materials that will not shrink, warp, tarnish or rot and require very little maintenance to retain peak performance.

Fully sharpened right here in our Ventura HQ, the Tactical Katana Machete comes complete with a Cordura back sheath for ease of carry and storage.

TWO HANDED KATANA MACHETE

As a young man Lynn C. Thompson was already studying and training in a variety of fighting arts. He always dreamed of owning a Katana, but even a lower priced World War II era sword was far too expensive, often costing hundreds and hundreds of dollars! That's why, over 30 years later Lynn created his Katana Machete.

Made in our factory in South Africa, its fully sharpened blade with its modern tactical Tanto point is heat treated to a tough spring temper. Sporting a black, baked-on anti-rust finish, it's tough, reliable and almost impervious to the elements.

To facilitate one or two-handed use, Lynn paired the blade with a long, extra tough, injection molded polypropylene handle with a sturdy cross guard.

An excellent bushcraft tool, capable machete, and superb beginner's Katana, the Katana Machete is equally at home clearing brush in the wilderness and cutting Tatami Mats in your back yard. Now, Lynn has increased the blade length of the Machete to 24 inches! Packing even more cutting power into this super-affordable modern Katana.

THE FIGHTING TOMAHAWK

The Tomahawk is a uniquely American invention. It can double as either a highly useful tool or as a ferocious piece of weaponry. It is, in fact, these two attributes that have endeared the Tomahawk to generations of countless Americans. Tomahawks, in many variations, have seen service in every armed conflict in our nation's history. Unfortunately, up until now, there has been very little formal instruction on how to exploit the versatility of the Tomahawk and take advantage of its full potential as a weapon. That is why Cold Steel is presenting, The Fighting Tomahawk.

COVERED TOPICS:

- Advantages as a weapon and customizing your Tomahawk
- Specialized training; Safety
- Gripping methods & Fighting stances and postures
- Stabbing, slapping, hammering gouging, and sawing
- Chopping, cutting, slashing, & hacking
- Pushing, pulling, and hooking.
- Disarm defenses.
- Stopping the charge
- Strength and agility drills
- Fight strategy
- Distance judging drills
- Identifying an enemy's weakness
- Creating & exploiting openings or opportunities
- Avoiding blows, stop hitting, counter slashing, blocking, parrying, and using the empty hand
- Sparring drills, & actual sparring
- Opposing other weapons

VDFT THE FIGHTING TOMAHAWK 2 Disc Set APPROX. 4 1/2 Hrs.

FIGHTING WITH THE SABER & CUTLASS

"Fighting with the Saber and Cutlass" is really not for people who are only interested in gaining dexterity in sport fencing or to learn the superficial choreographic techniques used for stage and screen. There are plenty of resources available on the market for learning those skills. This DVD set is designed as a serious, straightforward, and focused course dealing solely with the combative use of the saber and cutlass.

The series begins by illustrating how to properly oppose an opponent who is armed with a weapon that is similar to your own. This is the best way to build the necessary foundation of skills, techniques, and eye-hand coordination that will allow you to oppose a wide spectrum of adversaries who are armed with all kinds of street weapons.

After learning and refining these basic skills you will be ready to progress to the seldom taught subjects of infighting, grappling, and brawling with a saber. There is even a section on how to throw a saber with great effect in a combat situation.

COVERED TOPICS:

- Gripping Methods.
- Ready Stance or On Guard Position.
- Footwork Methods & Fighting Ranges.
- Seven Primary Cutting Methods.
- Five Primary Thrusting Methods.
- 8 Essential Parries.
- How to Recognize and Create Openings.
- Cut, Thrust, and Parry Drills & Ripostes.
- Strategy, Infighting, Grappling, and Brawling.
- Throwing the Saber or Cutlass.

THE FIGHTING MACHETE

Machetes are some of the most common and useful tools in the world. They are used on ranches, farms and orchards or wherever thick brush or dense jungle abound, their long wide blades get the job done. But the Machete is more than just a tool. In a self defense emergency, it can also double as a big knife, or short sword capable of cutting, slashing, smashing or piercing just about anything in its path. In this instructional DVD series, Lynn Thompson teaches you how to harness the full self defense potential of these versatile blades.

FEATURING...

- Advantages and Disadvantages of the Machete as a Weapon.
- How to Choose a Machete, Sharpen it, and Customize it.
- How to Grip your Machete and Carry and Conceal it.
- Multiple On-Guard Stances and Common Faults to Avoid.
- Footwork - Over 26 Footwork Techniques are Taught!
- 7 Methods of Employing the Point - Including Reverse Grip Methods.
- 13 Methods of Employing the Razor Edge of your Machete.

- Hitting, Smashing, and Hammering Utilizing the Flat of the Blade and Spine of your Machete
- Defensive Tactics Utilizing Footwork and Avoidance Patterns
- 13 Ways to use your Machete to Block or Parry Incoming Attacks
- Defeating Disarm Attempts
- Defeating the Charge on Take-Down Attempts
- Fighting from the Standing Grapple (Clinch)
- How to Create and Identify an Opening in an Opponent's Defense.
- And Much Much More.

RON BALICKI'S THE FIGHTING SARONG

Ron Balicki will take you through a comprehensive look at the Indonesian and Filipino art of "The Fighting Sarong". To date this art is relatively unknown to the world. Ron has trained in Sarong fighting for over 20 years and is sharing his vast knowledge with you today. You will learn how to use the sarong against an attacker who comes at you with punches, kicks and grappling. Learn what to do if your opponent tries to counter you or grab onto your sarong. Ron will also teach you how to use the sarong to defend yourself against a knife. In this series you will also get a special section taught by Martial Arts legend Guro Dan Inosanto.

DISC ONE:

- Empty Hand vs. Empty Hand
- The Sash Method
- The Double Weave

DISC TWO:

- The Double Weave
- The Single Weave

EXTRAS:

- Dan Inosanto teaching the Sarong
- The Sarong vs. The Knife

"Ron Balicki's video on the flexible weapons of the sarong and malong is educational and informative as well as entertaining. It is a must for the multi-dimensional minded martial artist of this decade. His presentation is easy to follow and learn and any martial artist should really benefit from this video regardless of style or system."

RON BALICKI'S FILIPINO BOXING

In this DVD series you will learn the traditional Filipino boxing method using empty hands instead of gloves. Developed during the heyday of bare-knuckle boxing, it has surprised and confounded the traditional "western style" boxer for more than a century. This is because it is not just a fist-oriented art, it teaches you how to use your whole body to subdue or drive off an attacker. These instructional DVD's will take you where no other video boxing training has attempted to go before. Whether you're a novice or experienced fighter, this video series has something of great value for you.

RON WILL TEACH YOU:

- Basic On Guard Stances
- Footwork Methods and Drills
- 30 Different Punching Methods, Including Ron's Famous Long Range Uppercut
- Multiple Kicking, Kneeing and Elbow Techniques
- Basic to Advanced Defense with Special Emphasis on Attacking and Destroying Incoming Punches and Kicks Using your Fists, Elbows, Knees and Feet
- Filipino Trapping Hand Drills - Single Hand & Double Hand
- Multiple Kicking Flow Drills
- Filipino Wrestling/Submission Grappling - Joint/Lock Combinations

WARRIOR'S EDGE®

I am not enamored with the saying: "If you get in a knife fight, expect to be cut." That saying condemns even a highly skilled knife fighter to be wounded, disfigured, disabled or even killed if ever forced to put his training with a blade to the test. This is why I have spent an enormous amount of time in full contact sparring with my training partners to develop a knife fighting method that allows the properly trained fighter to vanquish his enemy with minimal risk of being cut or stabbed in the process.

I have borrowed heavily from Western Fencing, and Filipino Martial Arts, including Lameco Escrima, Japanese Ken Jitsu, and Western Boxing as well. I have even added techniques and methods that are entirely my own.

The result of this effort is a knife fighting method which stresses the avoidance of close range in favor of long range techniques aided by footwork, rhythm, timing, speed and superior tactics and strategy. I guarantee that if you study these videos faithfully and practice diligently with a training partner you will gain the skill and ability necessary to give you a huge advantage if ever forced to defend your life or a loved one's with a fighting knife.

— Lynn C. Thompson, Cold Steel President

DISC 1: VOLUME 1

Intro to Long Range Knife Fighting:

- The three ranges of knife fighting.
- The types of knives you may encounter and demos of their cutting and piercing power.
- Concealing a knife.
- Make a Cold Steel® trainer.
- A knife must be strong and sharp.
- How to grip the fighting knife.

VOLUME 2

On Guard Stance & Footwork:

- The clock concept, our basic on guard stance.
- Mistakes in assuming the fighting stance.
- Footwork: This is an absolute "must-have" DVD as there are no knife fighters of any consequence out there who don't possess superior footwork.

DISC 2: VOLUME 3

Thrusts & Slashes:

- How to use the point of your fighting knife to execute the rake, speed jab, power stab, and épée thrust as well as elliptical and circular stabbing methods.
- How to use the edge of your knife to slash cut, chop, hack, snap cut and vertical whip.
- The twelve angles of attack.

VOLUME 4

Defense:

- Use defensive footwork & evasion techniques
- How to defend against attacks on your knife hand.
- Parrying, stop hitting, counter slashing and stabbing and blocking with your knife edge.
- Using the empty hand to stop-hit, beat, parry, block, tap, and chop.
- The concept of Mai (judging distance).

DISC 3: VOLUME 5

Offense:

- How to recognize and exploit the 21 common openings or weaknesses in your opponent's defense.
- 5 principles in creating openings, & the 11 pillars of strategy.

VOLUME 6

Training Drills & Sparring:

- Training drills that will develop the skills and attributes needed to spar.
- Actual sparring instruction and demonstrations.

DEATH DOWN UNDER

Come on the hunting adventure of a lifetime with world-renowned hunter and martial artist Lynn Thompson, as he travels throughout Australia. On this journey, you'll head into the rugged outback of the Northern Territories where Lynn will put his skills to the test, hunting huge Asian Buffalo.

Asian Buffalo are bigger in body size than the African Cape Buffalo. They have much thicker skin and are notorious for being far tougher and more challenging to kill.

Lynn will then travel from the Northern Territories to Southern Australia to hunt trophy Red Deer and Elk. Additionally, he will be assisting property owners and various government departments throughout Australia to cull Buffalo, Red Deer, Fallow Deer and other pest animals that threaten local crops and livestock.

This video features non-stop action and footage of over thirty days of hunting throughout Australia. You'll see over 100 animals fall to Lynn's trusty rifles.

HANDGUN HUNTING DOWN UNDER

Imagine experiencing a hunting trip where you truly didn't know if you'd come back in one piece? Lynn C. Thompson, came close while hunting the "outback" of Australia. One small mistake while trekking through the bush could have easily meant he'd be steam rolled by a 2000 pound Buffalo or get gored by a vicious wild boar. And that's not including other deadly challenges such as, venomous snakes, huge saltwater crocodiles and shark-infested rivers.

Always drawn to a new challenge, Lynn is potentially the first big game hunter in the world to take the Big Five (Elephant, Cape Buffalo, Rhino, Hippo and the Lion) and the Dangerous Seven (the Big Five plus the Leopard and the Crocodile) with an iron sighted handgun. And in this video, you will see his skills put to the test yet again.

Share in this unique hunting experience "Down Under" as he takes on huge Asian Buffalo and wild boar of Australia with his trusty Ruger® .44 Magnum Redhawk® and Super Redhawk® revolvers. In his 30 day hunt throughout the Northern Territories, Lynn will take them all on, armed only with his .44 Magnum revolver and his favorite Hornady® Ammunition.

SELF DEFENSE WITH THE SJAMBOK

In addition to its use as a cattle prod, whip, and a means of self protection, the African Sjabok is also known as a formidable snake killer. Its considerable reach, lightning speed and devastating impact make child's play of dispatching some of the biggest snakes. And you can imagine how devastatingly effective it is on two legged predators as well. A light blow can raise a serious welt while a heavy stroke can cut through thick clothing as efficiently as a razor, leaving a fearsome yet non-lethal wound. In this DVD, Lynn Thompson, President of Cold Steel® will teach you how to use the Sjabok to defend yourself and your loved ones.

SOME OF THE SUBJECTS COVERED...

- Advantages of the Sjabok as a weapon.
- Gripping methods.
- Fighting stances.
- Footwork
- Pommel strikes
- Training equipment and safety
- Pushing, pulling, and hooking
- Defeating disarm attempts
- One and two handed striking methods
- Using footwork to avoid blows
- Smashing, choking, and sawing
- Encircling, trapping, tripping, and uprooting
- Defeating the charge
- Defeating the standing grapple
- Defending your weapon hand, stop hitting, counter slashing, parrying, and blocking.

STUN, STAGGER AND STOP

If you are suddenly attacked, a heavy walking stick or stout cane can be a great comfort. This DVD set will give you the necessary skill and confidence to overcome muggers, gang members, and other street lowlifes determined to attack you or members of your family.

THIS DVD COVERS...

- The Power Stroke
- The Fan
- The Drop Stroke
- The Flurry
- The Wrap Stroke
- The Punyo
- The Redondo
- How to build strength, agility, & power in your strikes.
- Perfecting your defense by learning how to stop hit, counter slash, block, parry, pass and shield.
- Hitting using one or both hands.
- How to defend yourself against an opponent who's trying to wrest your stick from you, using one or even both hands.
- Demos of the multiple ways to fight off an opponent who charges and tries to grapple you to the ground.
- How to escape from a standing grapple or how to get back into the fight if you are dragged to the ground.
- Our strategy and tactics for dealing with multiple attackers, edged weapons, and blunt impact weapons.

SJAMBOK

In Africa, the Sjabok (Sham-Bawk) is a cattle prod, a whip, a riding crop and a means of self-protection. Unlike most

western style whips, the Sjabok is not plaited from thin leather thongs.

Instead, it is carved whole out of very thick Hippopotamus hide. Its considerable reach, lightning speed and devastating impact have built it quite a reputation as a sure defense against deadly snakes. Since the Sjabok is swung like a rod or stick and not cracked like a conventional western style whip, the weight, speed and flexibility of the Sjabok's lash does all the work and little skill is required to wield it effectively.

Today Hippo hide is pretty scarce and not commercially viable, so we've made a synthetic version of the classic Sjabok. Featuring a thick, beefy lash, injection molded from polypropylene and equipped with a soft comfortable Kray-Ex™ handle designed to resemble braided leather, our synthetic Sjabok rivals the look and performance of even the most expensive originals. And, since it's made entirely from super tough plastic, it's impervious to the elements and will never break, crack, shrink or mildew like leather is prone to do.

Keep a Sjabok handy in your vehicle. Lay it across the dash, stash it behind the seat or toss it in the bed, trunk or boot. Hang one on the wall near the door of your home, shop, barn, coop or kennel. Our Sjabok is sure to be the most useful and effective whip you have ever owned.

NEVER UNARMED®

A free man has the unalienable, God given right to defend his person, family, loved ones and property from violent assault, unlawful seizure, confiscation, or trespass. Since firearms are currently at the top of the force continuum it is essential that a free man possess them in abundance and be skilled in their use or he will not long enjoy his precious freedom. Never Unarmed® is a very broad look at an enormously wide subject; the firearms and ammunition you need to own or acquire for recreation, hunting, survival, and self-defense.

Filmed over 2 1/2 years, it's a HUGE undertaking and features Lynn C. Thompson with the gloves off as he discusses the pros and cons of air guns, .22 handguns, .22 rifles, mini revolvers, pocket pistols, service revolvers, service pistols, big bore handguns, single shot handguns, single shot rifles, double rifles, bolt action rifles, pump action rifles, lever action rifles, semi auto rifles, single and double shotguns, pump action shotguns, and semi automatic shotguns.

In format, Never Unarmed® will be mostly show and tell, with tactical and training insights from time to time, as well as thought provoking demonstrations regarding the use of cover, concealment, improvised fighting positions, home-made shields and much much more. At times the presentation can become quite graphic as Lynn teaches how to defend yourself against dangerous animals as well as how to neutralize violent human adversaries.

Meant for an international audience, it offers lots of options for those who don't enjoy the freedom, security and access to justice we do in the U.S.A. and are already severely restricted in their ability to keep and bear arms.

Absolutely full of non stop action, graphic demonstrations, and exciting feats of speed, accuracy, and fire power, Never Unarmed® is guaranteed to blow you away and change the way you look at and think about firearms forever.

NEW AK-47 FIELD KNIFE

Our AK-47 series folding knives have set the standard for hard use tactical folders. A firm favorite with military personnel and special units, these rugged, dependable folding knives have seen use all over the world and in several conflict zones, and have been in our line up in various iterations for almost a decade.

When we decided to explore designs for a new multi-purpose fixed blade field knife that would be suitable for military use, we kept coming back to the AK-47.

Our AK-47 Field Knife is enormously sturdy and amazingly effective. With robust solid steel construction, full width tang and American G-10 scales – it is function personified!

Expertly crafted from CPM 3-V High Carbon super-steel, the AK-47 Field Knife is then DLC (Diamond like Coated) from the tip of its beefy saber ground clip point blade to its oversized striking pommel; ensuring an unbelievably strong, razor sharp blade with a hard wearing virtually scratch resistant surface.

Supplied with our highly versatile Military standard Secure-Ex sheath, the AK-47 Field Knife is ready to take on any challenge!
